  - bd27870 Add debug logging to dockerng.login
- **PR** #42119: (*terminalmage*) Fix regression in CLI pillar override for salt-call @ *2017-07-06T17:02:52Z*
  - **ISSUE** #42116: (*terminalmage*) CLI pillar override regression in 2017.7.0rc1 | refs: #42119
  - 2b754bc Merge pull request #42119 from terminalmage/issue42116
  - 9a26894 Add integration test for 42116
  - 1bb42bb Fix regression when CLI pillar override is used with salt-call
- **PR** #42121: (*terminalmage*) Fix pillar.get when saltenv is passed @ *2017-07-06T16:52:34Z*
  - **ISSUE** #42114: (*clallen*) saltenv bug in pillar.get execution module function | refs: #42121
  - 8c0a83c Merge pull request #42121 from terminalmage/issue42114
  - d142912 Fix pillar.get when saltenv is passed
- **PR** #42094: (*terminalmage*) Prevent command from showing in exception when output_loglevel=quiet @ *2017-07-06T16:18:09Z*
  - 687992c Merge pull request #42094 from terminalmage/quiet-exception
  - 47d61f4 Prevent command from showing in exception when output_loglevel=quiet
- **PR** #42163: (*vutny*) Fix #42115: parse libcloud ``rc'' version correctly @ *2017-07-06T16:15:07Z*
  - **ISSUE** #42115: (*nomeelnoj*) Installing EPEL repo breaks salt-cloud | refs: #42163
  - dad2551 Merge pull request #42163 from vutny/fix-42115
  - b27b1e3 Fix #42115: parse libcloud ``rc'' version correctly
- **PR** #42164: (*Ch3LL*) Fix kerberos create_keytab doc @ *2017-07-06T15:55:33Z*
  - 2a8ae2b Merge pull request #42164 from Ch3LL/fix_kerb_doc
  - 7c0fb24 Fix kerberos create_keytab doc
- **PR** #42141: (*rallytime*) Back-port #42098 to 2016.11 @ *2017-07-06T15:11:49Z*
  - **PR** #42098: (*twangboy*) Change repo_ng to repo-ng | refs: #42141
  - 678d4d4 Merge pull request #42141 from rallytime/bp-42098
  - bd80243 Change repo_ng to repo-ng
- **PR** #42140: (*rallytime*) Back-port #42097 to 2016.11 @ *2017-07-06T15:11:29Z*
  - **PR** #42097: (*gtmanfred*) require large timediff for ipv6 warning | refs: #42140
  - c8afd7a Merge pull request #42140 from rallytime/bp-42097
  - 9c4e132 Import datetime

  - 1435bf1 require large timediff for ipv6 warning
- **PR** #42142: (*Ch3LL*) Update builds available for rc1 @ *2017-07-05T21:11:56Z*
  - c239664 Merge pull request #42142 from Ch3LL/change_builds
  - e1694af Update builds available for rc1
- **PR** #42078: (*damon-atkins*) pkg.install and pkg.remove fix version number input. @ *2017-07-05T06:04:57Z*
  - 4780d78 Merge pull request #42078 from damon-atkins/fix_convert_flt_str_version_on_cmd_line
  - 09d37dd Fix comment typo
  - 7167549 Handle version=None when converted to a string it becomes `None' parm should default to empty string rather than None, it would fix better with existing code.
  - 4fb2bb1 Fix typo
  - cf55c33 pkg.install and pkg.remove on the command line take number version numbers, store them within a float. However version is a string, to support versions numbers like 1.3.4
- **PR** #42105: (*Ch3LL*) Update releasecanddiate doc with new 2017.7.0rc1 Release @ *2017-07-04T03:14:42Z*
  - 46d575a Merge pull request #42105 from Ch3LL/update_rc
  - d4e7b91 Update releasecanddiate doc with new 2017.7.0rc1 Release
- **PR** #42099: (*rallytime*) Remove references in docs to pip install salt-cloud @ *2017-07-03T22:13:44Z*
  - **ISSUE** #41885: (*astronouth7303*) Recommended pip installation outdated? | refs: #42099
  - d38548b Merge pull request #42099 from rallytime/fix-41885
  - c2822e0 Remove references in docs to pip install salt-cloud
- **PR** #42086: (*abulford*) Make result=true if Docker volume already exists @ *2017-07-03T15:48:33Z*
  - **ISSUE** #42076: (*abulford*) dockerng.volume_present test looks as though it would cause a change | refs: #42086 #42086
  - 81d606a Merge pull request #42086 from redmatter/fix-dockerng-volume-present-result
  - 8d54968 Make result=true if Docker volume already exists
- **PR** #42021: (*gtmanfred*) Set concurrent to True when running states with sudo @ *2017-06-30T21:02:15Z*
  - **ISSUE** #25842: (*shikhartanwar*) Running salt-minion as non-root user to execute sudo commands always returns an error | refs: #42021
  - 7160697 Merge pull request #42021 from gtmanfred/2016.11
  - 26beb18 Set concurrent to True when running states with sudo
- **PR** #42029: (*terminalmage*) Mock socket.getaddrinfo in unit.utils.network_test.NetworkTestCase.test_host_to_ips @ *2017-06-30T20:58:56Z*
  - b784fbb Merge pull request #42029 from terminalmage/host_to_ips
  - 26f848e Mock socket.getaddrinfo in unit.utils.network_test.NetworkTestCase.test_host_to_ips
- **PR** #42055: (*dmurphy18*) Upgrade support for gnupg v2.1 and higher @ *2017-06-30T20:54:02Z*
  - e067020 Merge pull request #42055 from dmurphy18/handle_gnupgv21
  - e20cea6 Upgrade support for gnupg v2.1 and higher
- **PR** #42048: (*Ch3LL*) Add initial 2016.11.7 Release Notes @ *2017-06-30T16:00:05Z*
  - 74ba2ab Merge pull request #42048 from Ch3LL/add_11.7

  - 1de5e00 Add initial 2016.11.7 Release Notes
- **PR** #42024: (*leeclemens*) doc: Specify versionadded for SELinux policy install/uninstall @ *2017-06-29T23:29:50Z*
  - ca4e619 Merge pull request #42024 from leeclemens/doc/selinux
  - b63a3c0 doc: Specify versionadded for SELinux policy install/uninstall
- **PR** #42030: (*whiteinge*) Re-add msgpack to mocked imports @ *2017-06-29T20:47:59Z*
  - **PR** #42028: (*whiteinge*) Revert ``Allow docs to be built under Python 3'' | refs: #42030
  - **PR** #41961: (*cachedout*) Allow docs to be built under Python 3 | refs: #42028
  - 50856d0 Merge pull request #42030 from whiteinge/revert-py3-doc-chagnes-pt-2
  - 18dfa98 Re-add msgpack to mocked imports
- **PR** #42028: (*whiteinge*) Revert ``Allow docs to be built under Python 3'' | refs: #42030 @ *2017-06-29T19:47:46Z*

  - **ISSUE** #41367: (*lubyou*) certutil.add_store does not work on non english windows versions or on Windows 10 (localised or English) | refs: #41566
  - 66f8c83 Merge pull request #41566 from morganwillcock/certutil
  - c337d52 Fix test data for test_get_serial, and a typo
  - 7f69613 test and lint fixes
  - 8ee4843 Suppress output of crypt context and be more specifc with whitespace vs. serial
  - 61f817d Match serials based on output position (fix for non-English languages)
- **PR** #41679: (*terminalmage*) Prevent unnecessary duplicate pillar compilation @ *2017-06-21T15:32:42Z*
  - 4d0f5c4 Merge pull request #41679 from terminalmage/get-top-file-envs
  - a916e8d Improve normalization of saltenv/pillarenv usage for states
  - 02f293a Update state unit tests to reflect recent changes
  - b7e5c11 Don't compile pillar data when getting top file envs
  - 8d6fdb7 Don't compile pillar twice for salt-call
  - d2abfbf Add initial_pillar argument to salt.state
  - 70186de salt.pillar: rename the ``pillar'' argument to ``pillar_override''
- **PR** #41853: (*vutny*) Fix master side scheduled jobs to return events @ *2017-06-20T22:06:29Z*
  - **ISSUE** #39668: (*mirceaulinic*) Master scheduled job not recorded on the event bus | refs: #41658

- **ISSUE** #12653: (*pengyao*) salt schedule doesn't return jobs result info to master | refs: #41853
- **PR** #41695: (*xiaoanyunfei*) fix max RecursionError, Ellipsis | refs: #41853
- **PR** #41658: (*garethgreenaway*) Fixes to the salt scheduler | refs: #41853
- 29b0acc Merge pull request #41853 from vutny/fix-master-schedule-event
- e206c38 Fix master side scheduled jobs to return events

20.2.10 Salt 2016.11.9 Release Notes

Version 2016.11.9 is a bugfix release for *2016.11.0*.]

Changes for v2016.11.8..v2016.11.9

Extended changelog courtesy of Todd Stansell (https://github.com/tjstansell/salt-changelogs):

Changes:

Windows

Execution module pkg

Significate changes (PR #43708 & #45390, damon-atkins) have been made to the pkg execution module. Users should test this release against their existing package sls definition files.

- `pkg.list_available` no longer defaults to refreshing the winrepo meta database.
- `pkg.install` without a `version` parameter no longer upgrades software if the software is already installed. Use `pkg.install version=latest` or in a state use `pkg.latest` to get the old behavior.
- `pkg.list_pkgs` now returns multiple versions if software installed more than once.
- `pkg.list_pkgs` now returns `Not Found' when the version is not found instead of `(value not set)' which matches the contents of the sls definitions.
- `pkg.remove()` will wait upto 3 seconds (normally about a second) to detect changes in the registry after removing software, improving reporting of version changes.
- `pkg.remove()` can remove `latest` software, if `latest` is defined in sls definition.
- Documentation was update for the execution module to match the style in new versions, some corrections as well.
- All install/remove commands are prefix with cmd.exe shell and cmdmod is called with a command line string instead of a list. Some sls files in saltstack/salt-winrepo-ng expected the commands to be prefixed with cmd.exe (i.e. the use of &).
- Some execution module functions results, now behavour more like their Unix/Linux versions.

Execution module cmdmod

Windows cmdmod forcing cmd to be a list (issue #43522) resolved by ``cmdmod: Don't list-ify string commands on Windows'' PR #43807. Linux/Unix OS command & arguments requires a list. Windows was being treated the same. Windows requires commands & arguments to be a string, which this PR fixes.

- **PR** #45638: (*twangboy*) Win fix shell info @ *2018-01-23T22:38:22Z*
  - 10812969f0 Merge pull request #45638 from twangboy/win_fix_shell_info
  - 872da3ffba Only convert text types in the list_values function
  - 0e41535cdb Fix reg.py to only convert text types to unicode
  - 3579534ea5 Fix issue with detecting powershell
- **PR** #45564: (*Ch3LL*) Add PR changes to 2016.11.9 Release Notes @ *2018-01-19T21:36:05Z*
  - 2d1dd1186e Merge pull request #45564 from Ch3LL/r-notes-2016
  - 325f4cbcda Add PR changes to 2016.11.9 Release Notes
- **PR** #45563: (*Ch3LL*) Update man pages for 2016.11.9 @ *2018-01-19T21:19:00Z*
  - 28e4398150 Merge pull request #45563 from Ch3LL/man_2016
  - 529bc0c680 update release number for salt-call man page 2016.11.9
  - 11b7222148 Update man pages for 2016.11.9
- **PR** #45532: (*gtmanfred*) fix mock for opensuse @ *2018-01-18T22:48:30Z*
  - 654df0f526 Merge pull request #45532 from gtmanfred/2016.11.9
  - 6c26025664 fix mock for opensuse
- **PR** #45518: (*gtmanfred*) fix last 2016.11.9 failing tests @ *2018-01-18T12:03:50Z*
  - 571c33aa39 Merge pull request #45518 from gtmanfred/2016.11.9
  - 5455d2dee6 fix centos 6 pip test
  - 40255194b0 fix fedora pkg test
- **PR** #45443: (*rallytime*) Back-port #45399 to 2016.11.9 @ *2018-01-17T14:53:58Z*
  - **ISSUE** #45394: (*dmurphy18*) git.latest fails when ``depth'' is used with a non-default branch | refs: #45399
  - **PR** #45399: (*terminalmage*) Fix git.latest failure when rev is not the default branch | refs: #45443
  - 4e0a0eec1f Merge pull request #45443 from rallytime/bp-45399-2016.11.9
  - 919e92c911 Fix git.latest failure when rev is not the default branch
- **PR** #45493: (*damon-atkins*) win_pkg: pkg.refresh_db report an issue if a sls pkg definition does not contain a dict instead of aborting @ *2018-01-17T14:52:03Z*
  - **ISSUE** #45432: (*TheBigBear*) winrepo-ng fault pkg.refresh_db doesn't work - it processes ANY stray .git metadata *.sls files present on minion | refs: #45493
  - ebd4db66b8 Merge pull request #45493 from damon-atkins/2016.11_fix_sls_defintion_wrong_type
  - af108440df win_pkg lint space after ,
  - c6e922a236 win_pkg lint issues
  - f4627d7a80 fix quote i.e. change \` to \'
  - 6938a4c099 pkg.refresh_db report an issue if a sls pkg definition id not a dict instead of aborting.

- **PR** #45446: (*rallytime*) Back-port #45390 to 2016.11.9 @ *2018-01-16T20:08:38Z*
  - **PR** #45390: (*damon-atkins*) win_pkg: fix pkg.remove, pkg.list_pkgs | refs: #45446
  - 7322efba92 Merge pull request #45446 from rallytime/bp-45390
  - 69f045ea24 lint too-many-blank-lines
  - 10a7501ede Update release notes
  - 6f2affe01c fix pkg.remove, pkg.list_pkgs
- **PR** #45424: (*twangboy*) Fix some issues with reg.py @ *2018-01-13T19:34:47Z*
  - b0ece9f4d4 Merge pull request #45424 from twangboy/win_reg
  - 30f06205f7 Fix some issues with reg.py
- **PR** #45327: (*lomeroe*) Backport #44861 to 2016.11 @ *2018-01-08T21:10:41Z*
  - **PR** #44861: (*twangboy*) Fix win_lgpo for unknown values | refs: #45327
  - 0959ae4ea3 Merge pull request #45327 from lomeroe/`bp-44861`__2016.11
  - 784139f734 Check for values other than 0 or 1
- **PR** #45268: (*damon-atkins*) Fix pkg.install packagename version=latest i.e. if on an old version is installed @ *2018-01-08T17:34:15Z*
  - a6db5f95f0 Merge pull request #45268 from damon-atkins/2016.11_win_pkg_pkg_install_latest
  - 325a9f0f66 Update 2016.11.9.rst
  - 4da9200b9c Update 2016.11.9.rst
  - 126aee36ac Update 2016.11.9.rst
  - 1c01967943 Update 2016.11.9.rst
  - a0d89882b8 Fix pkg.install packagename version=latest i.e. if on an old version upgrade to the latest
- **PR** #45256: (*rallytime*) Back-port #45034 to 2016.11 @ *2018-01-04T14:25:42Z*
  - **PR** #45034: (*brejoc*) Fix for pidfile removal logging | refs: #45256
  - 1c5e905b61 Merge pull request #45256 from rallytime/bp-45034
  - 68f971b38f Apply test fixes from #45034 to parsers_test.py
  - 9454236694 Fix for pidfile removal logging
- **PR** #45235: (*rallytime*) Back-port #45209 to 2016.11 @ *2018-01-02T20:20:15Z*
  - **ISSUE** #598: (*syphernl*) Explanation on how to execute interactive installs | refs: #45209
  - **PR** #45209: (*gtmanfred*) enable UsePAM for ssh tests | refs: #45235
  - b75f50afe3 Merge pull request #45235 from rallytime/bp-45209
  - 2d0a9bbf7e enable UsePAM for ssh tests
- **PR** #44965: (*gtmanfred*) check if VALUE is a string_type @ *2018-01-02T16:42:39Z*
  - 3ab962b01a Merge pull request #44965 from gtmanfred/2016.11
  - a5d8a6340e check if VALUE is a string_type
- **PR** #45232: (*rasathus*) Backport #27160 to 2016.11 @ *2018-01-02T15:48:22Z*
  - **ISSUE** #27160: (*martinadolfi*) salt.states.mount persistence error using spaces in route | refs: #45232 #45232

  - 40fb30f63f Merge pull request #45232 from rasathus/2016.11
  - 7a2bd8f49b Merge branch `2016.11' into 2016.11
- **PR** #45161: (*lomeroe*) Backport #44944 to 2016.11 @ *2017-12-30T13:19:35Z*
  - **ISSUE** #44516: (*doesitblend*) Windows PY3 Minion Returns UTF16 UnicodeError | refs: #44944 #45161
  - **PR** #44944: (*lomeroe*) win_lgpo registry.pol encoding updates | refs: #45161
  - 707ef55175 Merge pull request #45161 from lomeroe/`bp-44944`__2016.11
  - 0a4c6b5a83 remove references to six.unichr
  - f3196d795d lint fixes for static regexes
  - 11b637d108 lint fixes
  - c14d6282ad do not decode registry.pol file wholesale, but instead decode individual elements of the file
- **PR** #45199: (*gtmanfred*) status.pid returns pid ids not process names @ *2017-12-28T19:06:11Z*
  - **ISSUE** #45188: (*jak3kaj*) salt state status.process always returns false | refs: #45199
  - 6f52034e08 Merge pull request #45199 from gtmanfred/status
  - fb07f9ea7d status.pid returns pid ids not process names
- **PR** #45118: (*garethgreenaway*) [2016.11] Fix to allow nodegroups to include sequences @ *2017-12-27T18:49:10Z*
  - **ISSUE** #44728: (*casselt*) Nodegroups can not be defined by glob with ? or seq | refs: #45118
  - d3381e27d0 Merge pull request #45118 from garethgreenaway/44728_nodegroups_seq
  - 0ff811de70 Swapping import to be the old path for 2016.11
  - b3e2f388f5 Fix to allow nodegroups to include sequences
- **PR** #45127: (*twangboy*) Fix issue with 1641 return code @ *2017-12-22T15:18:28Z*
  - f969aca3a3 Merge pull request #45127 from twangboy/win_fix_pkg
  - 14639739f2 Fix issue with 1641 return code
- **PR** #45137: (*twangboy*) Catch correct error type in list_keys and list_values @ *2017-12-22T14:45:22Z*
  - dc357b39f0 Merge pull request #45137 from twangboy/win_fix_reg_tests
  - b6f4ef8d73 Catch correct error type in list_keys and list_values
- **PR** #45130: (*rallytime*) Resolve groups for salt api @ *2017-12-21T20:38:32Z*
  - 0aa1662731 Merge pull request #45130 from rallytime/api-groups
  - 2dcc8df845 Resolve groups for salt api
- **PR** #45114: (*twangboy*) Move pam library load to try/except block @ *2017-12-21T14:37:17Z*
  - 7dc3cc4641 Merge pull request #45114 from twangboy/win_fix_pam
  - cf5eae1f77 Move pam library load to try/except block
- **PR** #45100: (*rallytime*) Back-port #45070 to 2016.11 @ *2017-12-20T14:55:01Z*
  - **ISSUE** #45049: (*vernondcole*) salt cloud module documentation is missing from the index. | refs: #45070
  - **PR** #45070: (*vernondcole*) insert clouds modules in index | refs: #45100
  - 7e128e8f15 Merge pull request #45100 from rallytime/bp-45070
  - 0bdb46dab9 add clouds modules to index

- **PR** #45098: (*rallytime*) Back-port #45092 to 2016.11 @ *2017-12-20T14:40:51Z*
  - **PR** #45092: (*terminalmage*) Fix integration.states.test_pip.PipStateTest.test_pip_installed_weird_install | refs: #45098
  - bdf93f339d Merge pull request #45098 from rallytime/bp-45092
  - 80b6bd6813 Fix integration.states.test_pip.PipStateTest.test_pip_installed_weird_install
- **PR** #44078: (*rossengeorgiev*) user.present: allow date param to be 0 @ *2017-12-19T15:59:29Z*
  - **ISSUE** #41044: (*pirxthepilot*) user.present `date' parameter is not applying | refs: #44078
  - 324b7d4058 Merge pull request #44078 from rossengeorgiev/fix-41044
  - a81a6fe23c fix #41044; allow for date param to be 0
- **PR** #44970: (*rallytime*) Update bootstrap script to latest release: 2017.12.13 @ *2017-12-19T15:49:05Z*
  - 48a59761df Merge pull request #44970 from rallytime/update-bootstrap-script
  - b2c8057427 Update bootstrap script to latest release: 2017.12.13
- **PR** #45069: (*rallytime*) Back-port #45040 to 2016.11 @ *2017-12-19T14:25:57Z*
  - **ISSUE** #45036: (*dijit*) Quiet installation of packaged minions fails due to redistributable not being quietly installed [py3] [Windows] | refs: #45040 #45040
  - **ISSUE** #27160: (*martinadolfi*) salt.states.mount persistence error using spaces in route | refs: #45232 #45232
  - **PR** #45040: (*dijit*) Installation Fails on headless machines. | refs: #45069
  - 637fdaed58 Merge pull request #45069 from rallytime/bp-45040
  - aa438e1605 Installation Fails on headless machines.
    - de53c45c29 Backport #27160 to 2016.11
- **PR** #44969: (*rallytime*) Back-port #41305 to 2016.11 @ *2017-12-15T17:22:18Z*
  - **ISSUE** #41286: (*arthtux*) boto_vpc.accept_vpc_peering_connection wait a object | refs: #41305
  - **PR** #41305: (*arthtux*) correct accept_vpc_peering_connection | refs: #44969
  - 4d6d640381 Merge pull request #44969 from rallytime/bp-41305
  - 5c4bee43dc correct accept_vpc_peering_connection
- **PR** #45031: (*terminalmage*) Fix invalid exception class in mysql returner @ *2017-12-15T15:00:15Z*
  - 10de468f13 Merge pull request #45031 from terminalmage/fix-mysql-returner
  - f3bd12c27c Fix invalid exception class in mysql returner
- **PR** #44972: (*terminalmage*) Backport #44958 to 2016.11 branch @ *2017-12-14T16:56:02Z*
  - **ISSUE** #44820: (*msteed*) Custom returner breaks manage runner | refs: #44958
  - **PR** #44958: (*terminalmage*) Fix a race condition in manage runner | refs: #44972
  - 9a7406207f Merge pull request #44972 from terminalmage/bp-44958
  - a416bf0112 No need to manually do connect_pub, use listen=True in run_job
  - 3ec004bd2e Fix a race condition in manage runner
- **PR** #44385: (*gtmanfred*) schedule should be a dict in opts @ *2017-12-12T20:44:02Z*
  - **ISSUE** #44378: (*llua*) minion: infinite loop during start when schedule key is null | refs: #44385

  - 1032ca3290 Merge pull request #44385 from gtmanfred/schedule
  - 9e15c38da2 add comma
  - 855d933cb7 schedule should be a dict
- **PR** #44770: (*cruscio*) Fix minion ping_interval documentation @ *2017-12-11T19:50:19Z*
  - **ISSUE** #44734: (*cruscio*) Documentation inconsistency for minion ping_interval timing | refs: #44770
  - 68d901b12c Merge pull request #44770 from cruscio/2016.11
  - e2682bf441 Fix minion ping_interval documentation
- **PR** #44335: (*gtmanfred*) add docker-ce to docker subtype grains check @ *2017-12-10T17:17:49Z*
  - **ISSUE** #44292: (*andrew-regan*) grains['virtual_subtype'] assignment for Docker broken on Mac | refs: #44335
  - **ISSUE** #4: (*thatch45*) pacman module
  - d4ab55ec47 Merge pull request #44335 from gtmanfred/2016.11
  - 3f1268d67f fix patching for python 2.6
  - 1d0bd5bb32 Merge branch `2016.11' into 2016.11
  - f02b02032d Merge pull request #4 from terminalmage/pr-44335
    - b4eb1527a6 Add test for PR 44335
  - a30af3252e add docker-ce to docker subtype grains check
- **PR** #44579: (*roaldnefs*) Fix bug in cron module and state - Fixes #44530 @ *2017-12-07T20:18:27Z*
  - **ISSUE** #44530: (*roaldnefs*) Identifier not working in salt.states.cron when special is used | refs: #44579
  - bb1f8dceaf Merge pull request #44579 from roaldnefs/fix-cron-identifier
  - df73a4c051 Merge branch `2016.11' into fix-cron-identifier
- **PR** #44852: (*damon-atkins*) win_pkg fix spelling typos and minion option 2016.11 @ *2017-12-06T16:49:17Z*
  - af0131fa1f Merge pull request #44852 from damon-atkins/2016.11_win_pkg_typo_n_fix
  - 0e7c19084f Lint: Remove extra whitespace
  - 7c7e21f94d Fix spelling typo, and fix backwards campatible minion option for repo location
- **PR** #44794: (*terminalmage*) Fix regression in file.managed when source_hash used with local file @ *2017-12-04T14:23:29Z*
  - **ISSUE** #44365: (*icycle77*) file.managed appears to ignore source_hash check | refs: #44794
  - 88c0d66b4e Merge pull request #44794 from terminalmage/issue44365
  - 3b8b6f25e6 Remove debugging line
  - 153bf45b03 Fix regression in file.managed when source_hash used with local file
- **PR** #44738: (*rallytime*) Bump some deprecation warnings from Oxygen to Fluorine @ *2017-12-01T23:10:08Z*
  - **ISSUE** #35777: (*rallytime*) Properly deprecate template context data in Fluorine | refs: #44738
  - **ISSUE** #35523: (*rallytime*) Come up with a reasonable alternative for lxc.edited_conf | refs: #44738
  - c8bb9dfbbb Merge pull request #44738 from rallytime/bump-oxygen-warnings
  - ead3c569e1 Bump deprecation warnings from Oxygen to Fluorine
- **PR** #44741: (*gtmanfred*) if gateway is not specified use iface @ *2017-12-01T23:09:03Z*

  - **ISSUE** #44730: (*msciciel*) State network.routes could not add route without gateway on centos7 | refs: #44741
  - 88e3aab00d Merge pull request #44741 from gtmanfred/rhip
  - 439dc8dce6 if gateway is not specified use iface
- **PR** #44699: (*jfindlay*) utils/files.py remove temp file upon move failure @ *2017-12-01T15:03:54Z*
  - **ISSUE** #31405: (*SEJeff*) Salt leaves tmp file when file.managed dest file is immutable | refs: #44699
  - 97e0cf569c Merge pull request #44699 from jfindlay/attr_file
  - 9e5a40ea7c Merge branch `2016.11' into attr_file
  - 5c34607f6c utils/files remove temp file upon move failure
- **PR** #44714: (*rallytime*) Allow --static option to display state runs with highstate output @ *2017-12-01T14:31:19Z*
  - **ISSUE** #44556: (*doesitblend*) --static option doesn't return highstate output | refs: #44714
  - 7434e0afdf Merge pull request #44714 from rallytime/fix-44556
  - 1bbe1abeb2 Allow --static option to display state runs with highstate output
- **PR** #44517: (*whytewolf*) Publish port doc missing @ *2017-11-28T21:50:19Z*
  - 998d714ee7 Merge pull request #44517 from whytewolf/publish_port_doc_missing
  - 4b5855283a missed one place where i didnt chanbge master_port from my copy to publish_port
  - e4610baea5 update doc to have publish port
- **PR** #41279: (*Ch3LL*) Add fqdn and dns core grain tests @ *2017-11-27T21:28:10Z*
  - 6169b52749 Merge pull request #41279 from Ch3LL/add_grain_tests
  - 1b64f15692 Merge branch `2016.11' into add_grain_tests
  - 095f1b7d7a Merge branch `2016.11' into add_grain_tests
  - 9ea4db4224 mock socket.getaddrinfo
  - 78a07e30f4 add more fqdn tests and remove some of the mocking
  - 5dbf4144ce add ipv6 in opts
  - eabc1b4f9c Add fqdn and dns core grain tests
    - 3ec4329307 Merge branch `2016.11' into fix-cron-identifier
- **PR** #44563: (*creideiki*) Send Unix timestamps to database in pgjsonb returner @ *2017-11-21T17:44:32Z*
  - **ISSUE** #44544: (*creideiki*) pgjsonb returner sets wrong timezone on timestamps in database when using Python 2 | refs: #44563
  - dc6de050a9 Merge pull request #44563 from creideiki/pgjsonb-timestamps-44544
  - 231e412ca4 Merge branch `2016.11' into pgjsonb-timestamps-44544
- **PR** #44602: (*rallytime*) Handle timeout_monitor attribute error for new versions of CherryPy @ *2017-11-20T21:38:40Z*
  - **ISSUE** #44601: (*rallytime*) CherryPy 12.0 removed support for ``engine.timeout_monitor.on'' config option | refs: #44602
  - 4369df020b Merge pull request #44602 from rallytime/fix-44601
  - ff303fd060 Handle timeout_monitor/TimeoutError issues for new versions of CherryPy

- **PR** #44604: (*lorengordon*) Documents the exclude argument in state execution module @ *2017-11-20T18:19:18Z*
  - 4a4756fc37 Merge pull request #44604 from lorengordon/doc-exclude
  - c4a6c40eb3 Documents the exclude argument in state execution module
  - 15c445e6b9 Send Unix timestamps to database in pgjsonb
    - 99fa05a456 Fix for bug in cron state
    - 97328faeac Fix for bug in cron module
- **PR** #44434: (*whytewolf*) add a note that describes grain rebuilding on restart and refresh @ *2017-11-14T11:21:54Z*
  - 91d46d4cfc Merge pull request #44434 from whytewolf/1837
  - d148e39dda change from md to rst for code reference
  - 955e305bda fix bad english, as requested by cachedout
  - 7256fcc1c9 update note to take into account grains_cache
  - 7a2981585e Merge branch `2016.11' into 1837
  - aca0405b26 add a note that describes grain rebuilding on restart and refresh
- **PR** #44321: (*gvengel*) Fix file.line diff formatting. @ *2017-11-13T19:36:39Z*
  - **ISSUE** #41474: (*dmaziuk*) state.file.* line endings | refs: #44321
  - a3bd99317f Merge pull request #44321 from gvengel/fix-file-line-diff-output
  - 69a50204a6 Add newline for lint.
  - ef7b6bbb81 Fixed issue with file.line on Windows running Python 2.
  - 8f89c99fa5 Fix FileModuleTest setUp and tearDown to work on Windows.
  - 3ac5391f5f Namespace missing functions for file.line on Windows.
  - b2b8f075b9 Fixed test to work on Windows.
  - 5a5a2dd026 Added integration test for issue #41474
  - 24d7315f1a Fix file.line diff formatting.
- **PR** #43708: (*damon-atkins*) Merge Ready : Backport develop win_pkg to 2016.11 with additional bug fixes @ *2017-11-13T19:33:41Z*
  - **ISSUE** #43417: (*damon-atkins*) win_pkg: pkg.install and pkg.remove general issues | refs: #43708
  - 9ca563718d Merge pull request #43708 from damon-atkins/2016.11_43417_Backport_and_Fixes
  - 04d03ea6b8 Updated comment
  - 1dd565e585 Merge remote branch `upstream/2016.11' into 2016.11_43417_Backport_and_Fixes
  - dd48ba2616 Merge remote branch `upstream/2016.11' into 2016.11_43417_Backport_and_Fixes
  - a0d08598bf dco fix
  - 9467899fc6 Merge remote branch `upstream/2016.11' into 2016.11_43417_Backport_and_Fixes
  - 6dc180fd0e doco fixes
  - 2496a42ea4 lint fix
  - 2c937fbe19 Merge remote branch `upstream/2016.11' into 2016.11_43417_Backport_and_Fixes

  - c9c8c48a4d all remove/install commands are passed to cmd.exe /s /c and commands are passed as strings to cmdmod
  - 350244bd93 typo in comments and doc strings.
  - ec31f5a9bd 2017.11/develop version() was ignoring saltenv setting.
  - b314549a32 Backport of devlop to 2016.11 with additional bug fixes
- **PR** #44477: (*rallytime*) Back-port #44424 to 2016.11 @ *2017-11-13T17:33:29Z*
  - **ISSUE** #44423: (*mtkennerly*) The win_path.exists state cannot prepend to the very start of the PATH | refs: #44424
  - **PR** #44424: (*mtkennerly*) Fix #44423: Handle index=None and index=0 distinctly in the win_path.exists state | refs: #44477
  - 68ea22188e Merge pull request #44477 from rallytime/bp-44424
  - 4a9f8dcc96 Fix #44423: Handle index=None and index=0 distinctly
- **PR** #44483: (*terminalmage*) salt-call: account for instances where __pillar__ is empty @ *2017-11-13T17:30:36Z*
  - **ISSUE** #44034: (*seanjnkns*) salt-call pillar overrides broken in 2016.11.8 and 2017.7.2 | refs: #44483
  - 2c89050a24 Merge pull request #44483 from terminalmage/issue44034
  - a9db8becea salt-call: account for instances where __pillar__ is empty
- **PR** #44489: (*whytewolf*) update log-granular-levels to describe what they are filtering on @ *2017-11-13T17:27:37Z*
  - b5c2028680 Merge pull request #44489 from whytewolf/1956_log-granular-levels
  - 9cdeb4e903 update log-granular-levels to describe what they are filtering on
- **PR** #44193: (*twangboy*) Fix reg.py for use with LGPO module @ *2017-11-10T19:01:17Z*
  - ea07f9c54c Merge pull request #44193 from twangboy/win_fix_reg
  - 44d6d9f46d Remove unused import (lint)
  - f7502436bd Fix various issues
  - 221e6e3b91 make salt.utils.to_unicode return none when passed none
  - ce41acc788 Fix many issues with reg.py
  - 4a19df1f7f Use six.text_type instead of str
  - 1b12acd303 Check type before casting
  - 03fa37b445 Cast vdata to it's proper type
- **PR** #43863: (*nicholasmhughes*) Atomicfile only copies mode and not user/group perms @ *2017-11-10T18:47:55Z*
  - **ISSUE** #38452: (*jf*) file.line with mode=delete does not preserve ownership of a file
  - ed8da2450b Merge pull request #43863 from nicholasmhughes/fix-atomicfile-permission-copy
  - ea852ec5d3 remove index use with stat module attributes
  - dbeeb0e917 fixes #38452 atomicfile only copies mode and not user/group perms
- **PR** #44260: (*seanjnkns*) Fixes #39901 for RH/CentOS 7 @ *2017-11-07T23:14:59Z*
  - **ISSUE** #39901: (*seanjnkns*) network.managed ipaddrs ignored | refs: #44260
  - a66cd67d15 Merge pull request #44260 from seanjnkns/issue-39901

  - ed8cccf457 #39901: Fix pylint
  - 43c81dfdee #39901: Add unit tests
  - 613d500876 Merge branch `2016.11' into issue-39901
  - b97e8046ca Utilize salt.utils.validate.net.* and _raise_error_iface
  - 6818f3631d Fixes #39901 for RH/CentOS 7
- **PR** #44383: (*gtmanfred*) switch salt-jenkins over to saltstack for kitchen-salt tests @ *2017-11-03T19:56:48Z*
  - 5e289f42ba Merge pull request #44383 from gtmanfred/2016kitchen
  - b65f4ea4ea switch salt-jenkins over to saltstack
- **PR** #44173: (*twangboy*) Use google style docstrings in win_system.py @ *2017-10-31T17:56:34Z*
  - cab54e34b5 Merge pull request #44173 from twangboy/win_system_docs
  - 8e111b413d Fix some of the wording and grammer errors
  - a12bc5ae41 Use google style docstrings
- **PR** #44304: (*jfindlay*) states.cron identifier defaults to name @ *2017-10-31T16:39:47Z*
  - 7aaea1d179 Merge pull request #44304 from jfindlay/cron_id
  - cc038c5bec states.cron identifier defaults to name
- **PR** #44322: (*rossengeorgiev*) updated CLI docs for salt-ssh @ *2017-10-30T21:39:23Z*
  - **ISSUE** #44313: (*rossengeorgiev*) salt-ssh: --user option missing from the cli documentation | refs: #44322
  - e4dbbde734 Merge pull request #44322 from rossengeorgiev/saltssh-docs-update
  - b18f2e5a6d fix program name and description for --static
  - 5b10918f02 updated CLI docs for salt-ssh
- **PR** #44345: (*gtmanfred*) remove binding from erb template rendering @ *2017-10-30T20:57:43Z*
  - 4e6f09e3eb Merge pull request #44345 from gtmanfred/2016kitchen
  - 79b8b2d0bf remove binding
- **PR** #44342: (*gtmanfred*) render template files platforms.yml and driver.yml @ *2017-10-30T20:04:00Z*
  - 209847c8c2 Merge pull request #44342 from gtmanfred/2016kitchen
  - c50508f0b7 render template files platforms.yml and driver.yml
- **PR** #44339: (*corywright*) Remove leading dash from options in archive.tar docs (2016.11) @ *2017-10-30T19:00:34Z*
  - **ISSUE** #44336: (*corywright*) Docs for archive.tar should not use leading dash for tar options | refs: #44339
  - 1be65224cb Merge pull request #44339 from corywright/issue-44336-fix-archive-tar-docs-2016-11
  - 9c1c35a59f Remove leading dash (-) from options in archive.tar documentation
- **PR** #44295: (*gurubert*) fixes issue #44272 @ *2017-10-27T14:28:57Z*
  - **ISSUE** #44272: (*gurubert*) [patch] win_service.stop() fails | refs: #44295
  - bebc33daf5 Merge pull request #44295 from HeinleinSupport/issue44272
  - f972715a45 fixes issue #44272
- **PR** #44286: (*gtmanfred*) use our git repo for kitchen-salt @ *2017-10-25T19:27:32Z*

  - e7ca9f8407 Merge pull request #44286 from gtmanfred/2016.11
  - 193e715e37 use our git repo for kitchen-salt
- **PR** #44259: (*gtmanfred*) begin switching in kitchen-salt for running the test suite @ *2017-10-25T13:30:35Z*
  - 8a1ea165af Merge pull request #44259 from gtmanfred/2016.11
  - 56a3ad8f68 fix pylint comments
  - 4add666db1 add comment to Gemfile and move copyartifacts
  - b4c8f7eb57 fix pylint
  - 392fd4f837 try newest salttesting
  - 79251287d0 add logging
  - 38963d5a82 use transport if not set in state_file
  - 10e309a64f which vagrant should go to stderr
  - 9307564de0 fix output columns
  - 2da22f87e1 test opennebula
  - 9f38f16905 add opennebula to Gemfile
  - 7465f9b27a add script for copying back artifacts
  - 255118cfd7 run tests with kitchen
- **PR** #44268: (*twangboy*) Fix typo @ *2017-10-25T13:01:35Z*
  - 9d6bc8509b Merge pull request #44268 from twangboy/win_fix_lgpo_typo
  - a6a4c10a77 Fix typo
- **PR** #44269: (*terminalmage*) Fix log message in salt.utils.gitfs @ *2017-10-25T13:00:58Z*
  - 0beb65a283 Merge pull request #44269 from terminalmage/fix-log-message
  - bc9cd65496 Fix log message in salt.utils.gitfs
- **PR** #44160: (*gtmanfred*) add changes to test return @ *2017-10-23T14:35:21Z*
  - **ISSUE** #44155: (*rhoths*) file.directory with clean not triggering listener in test mode | refs: #44160
  - 304dd2529d Merge pull request #44160 from gtmanfred/directory
  - a7d3d668f4 missed removing changes in the next test
  - ac0b5ec440 fix test
  - d3d00c3e62 add changes to test return
- **PR** #44205: (*rallytime*) Back-port #44177 to 2016.11 @ *2017-10-23T14:09:07Z*
  - **PR** #44177: (*senthilkumar-e*) Fixing default redis.host in documentation | refs: #44205
  - e10395483d Merge pull request #44205 from rallytime/bp-44177
  - b9940f8521 Fixing default redis.host in documentation
- **PR** #44167: (*garethgreenaway*) Fixes to modules/debian_ip @ *2017-10-20T14:25:39Z*
  - **ISSUE** #44140: (*vtolstov*) incorrect network interfaces settings with network.managed under debian jessie | refs: #44167
  - 09ddfd0c08 Merge pull request #44167 from garethgreenaway/44140_debian_ip_fixes

  - 5f7555846f When looping through the various pre, post, up and down commands put them into the interface dict using the right internet family variable.

- **PR** #43830: (*rallytime*) Back-port #43644 to 2016.11 @ *2017-10-19T22:57:51Z*
  - **PR** #43644: (*defanator*) Several fixes for RDS DB parameter group management | refs: #43830
  - 9f9e936b52 Merge pull request #43830 from rallytime/bp-43644
  - 12845ae802 Several fixes for RDS DB parameter group management
- **PR** #43994: (*oeuftete*) Fix manage.present to show lost minions @ *2017-10-19T22:27:59Z*
  - **ISSUE** #43936: (*oeuftete*) manage.present still reports *lost* minion | refs: #43994
  - **ISSUE** #38367: (*tyeapple*) logic error in connected_ids function of salt/utils/minions.py when using include_localhost=True | refs: #43994
  - 07db6a3d8b Merge pull request #43994 from oeuftete/fix-manage-runner-presence
  - f3980d7d83 Fix manage.present to show lost minions
- **PR** #44188: (*terminalmage*) yumpkg: Check pkgname instead of name to see if it is a kernel pkg @ *2017-10-19T22:20:35Z*
  - **ISSUE** #44150: (*rossengeorgiev*) version param in pkg.installed broken in 2016.11.8/2017.7.2 in EL6-7 | refs: #44188
  - a07537e258 Merge pull request #44188 from terminalmage/issue44150
  - 0692f442db yumpkg: Check pkgname instead of name to see if it is a kernel pkg
- **PR** #44158: (*rallytime*) Back-port #44089 to 2016.11 @ *2017-10-19T20:38:15Z*
  - **ISSUE** #43427: (*tylerjones4508*) Salt-Cloud There was a profile error: invalid literal for int() with base 10: | refs: #44089
  - **PR** #44089: (*cetanu*) Catch on empty Virtualbox network addr #43427 | refs: #44158
  - 715edc0cea Merge pull request #44158 from rallytime/bp-44089
  - 534faf0b7a Catch on empty Virtualbox network addr #43427
- **PR** #44131: (*rallytime*) Back-port #44029 to 2016.11 @ *2017-10-17T15:05:39Z*
  - **ISSUE** #43307: (*marek-knappe*) Filesystem creation is failing on newly created LV
  - **PR** #44029: (*msummers42*) addresses issue #43307, **disk.format_** to disk.format | refs: #44131
  - 0cd493b691 Merge pull request #44131 from rallytime/bp-44029
  - bebf301976 fixed test addressing issue #43307, **disk.format_** to disk.format
  - b4ba7ae2fc addresses issue #43307, **disk.format_** to disk.format
- **PR** #44093: (*gtmanfred*) don't filter if return is not a dict @ *2017-10-16T19:13:19Z*
  - **ISSUE** #44087: (*mfussenegger*) Using state.highstate with *terse=true* prevents useful error output | refs: #44093
  - 3a68e356f8 Merge pull request #44093 from gtmanfred/fix-44087
  - 5455c5053b fix pylint
  - f749cafa25 don't filter if return is not a dict
- **PR** #44122: (*cachedout*) Add note about GPG signing to PR template @ *2017-10-16T19:09:38Z*
  - c785d7a847 Merge pull request #44122 from cachedout/gpg_pr_template

  - e41e3d76be Typo fix
  - 37c7980880 Add note about GPG signing to PR template
- **PR** #44124: (*rallytime*) [2016.11] Merge forward from 2016.11.8 to 2016.11 @ *2017-10-16T19:07:14Z*
  - **PR** #44028: (*rallytime*) Back-port #44011 to 2016.11.8
  - **PR** #44011: (*Ch3LL*) Security Fixes for 2016.11.8 | refs: #44028
  - bf90ea1f51 Merge pull request #44124 from rallytime/merge-2016.11
  - 59861291c8 Merge branch `2016.11.8' into `2016.11'
    - 57623e2abe Merge pull request #44028 from rallytime/bp-44011
      - 89e084bda3 Do not allow IDs with null bytes in decoded payloads
      - 206ae23f15 Don't allow path separators in minion ID
- **PR** #44097: (*gtmanfred*) OpenNebula does not require the template_id to be specified @ *2017-10-16T18:36:17Z*
  - 13f3ffa83a Merge pull request #44097 from gtmanfred/openneb
  - c29655b2c2 Merge branch `2016.11' into openneb
  - bd2490b149 OpenNebula does not require the template_id to be specified
- **PR** #44110: (*roaldnefs*) Format fix code example local returner doc @ *2017-10-16T15:57:50Z*
  - ac3e4df964 Merge pull request #44110 from roaldnefs/fix-doc-local-returner
  - efd58f7594 Merge branch `2016.11' into fix-doc-local-returner
- **PR** #44092: (*techhat*) Made sure that unicoded data is sent to sha256() @ *2017-10-13T21:20:12Z*
  - c960ca32c2 Merge pull request #44092 from techhat/awsunicode
  - bbd9db4d00 One more encoding
  - 0e8b325667 Apparently __salt_system_encoding__ is a thing
  - 1e7211838d Use system encoding
  - 1af21bbe5e Made sure that unicoded data is sent to sha256()
- **PR** #44021: (*whiteinge*) Also catch cpstats AttributeError for bad CherryPy release ~5.6.0 @ *2017-10-12T18:11:41Z*
  - **ISSUE** #43581: (*jcourington*) cherrypy stats issue | refs: #44021
  - **PR** #42655: (*whiteinge*) Reenable cpstats for rest_cherrypy | refs: #44021
  - **PR** #33806: (*cachedout*) Work around upstream cherrypy bug | refs: #42655
  - d89c317d96 Merge pull request #44021 from whiteinge/cpstats-attribute-error
  - bf14e5f578 Also catch cpstats AttributeError for bad CherryPy release ~5.6.0
- **PR** #44025: (*dayid*) Typo correction of lover to lower @ *2017-10-11T17:31:45Z*
  - bbdabe242a Merge pull request #44025 from dayid/lover_typo
  - 385980c21a Merge branch `2016.11' of https://github.com/saltstack/salt into lover_typo
  - 266dc00a23 Typo correction of lover to lower
- **PR** #44030: (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 @ *2017-10-11T13:01:42Z*
  - **PR** #44010: (*Ch3LL*) Security Fixes for 2016.3.8

  - **PR** #43977: (*Ch3LL*) Add Security Notes to 2016.3.8 Release Notes
  - d8f3891a5e Merge pull request #44030 from rallytime/merge-2016.11
  - 53eaf0d75c Merge branch `2016.3' into `2016.11'
  - 64fd839377 Merge pull request #44010 from Ch3LL/2016.3.7_follow_up
    * 9a00302cd8 fix 2016.3.7 release notes merge conflict
    * 63da1214db Do not allow IDs with null bytes in decoded payloads
    * ee792581fc Don't allow path separators in minion ID
    * 8aab65c718 fix 2016.3.7 release notes merge conflict
  - bd73dcb02c Merge pull request #43977 from Ch3LL/3.8_sec
  - 5fb3f5f6b1 Add Security Notes to 2016.3.8 Release Notes
- **PR** #44011: (*Ch3LL*) Security Fixes for 2016.11.8 | refs: #44028 @ *2017-10-10T20:04:36Z*
  - 0dbf41e79e Merge pull request #44011 from Ch3LL/2016.11.7_follow_up
  - c0149101c0 Do not allow IDs with null bytes in decoded payloads
  - 19481423dd Don't allow path separators in minion ID
- **PR** #44023: (*Ch3LL*) Add 2016.11.9 Release Note File @ *2017-10-10T20:03:03Z*
  - d61300df20 Merge pull request #44023 from Ch3LL/11.9rn
  - 7f9015eb41 Add 2016.11.9 Release Note File
- **PR** #44019: (*benediktwerner*) Added missing docs to the tutorial index and fixed spelling mistake @ *2017-10-10T19:57:06Z*
  - 9ff53bf63a Merge pull request #44019 from benediktwerner/2016.11
  - bc53598027 Fixed spelling mistake in salt_bootstrap tutorial
  - 6c30344824 Added missing tutorial docs to the tutorial index
- **PR** #43955: (*meaksh*) Enable a new `--with-salt-version' parameter for the ``setup.py'' script @ *2017-10-10T17:36:52Z*
  - **ISSUE** #2291: (*scott-w*) Extend pkg to install from file
  - 364523f5f8 Merge pull request #43955 from meaksh/2016.11-fix-2291
  - a81b78381b Merge branch `2016.11' into 2016.11-fix-2291
  - 44bc91bb98 Enable `--with-salt-version' parameter for setup.py script
- **PR** #43962: (*bobrik*) Report built-in modiles in kmod.available, fixes #43945 @ *2017-10-10T16:31:39Z*
  - **ISSUE** #43945: (*bobrik*) kmod.present doesn't work with compiled-in modules
  - fec714b91d Merge pull request #43962 from bobrik/kmod-built-in
  - 95ab901553 Report built-in modiles in kmod.available, fixes #43945
- **PR** #43960: (*cro*) Require that bindpw be non-empty when auth.ldap.anonymous is False @ *2017-10-09T23:09:02Z*
  - e434c39c4e Merge pull request #43960 from cro/ldap_nopw_bind2
  - 962a20cf4b Require that bindpw be non-empty if auth.ldap.anonymous=False
  - 9df3d91d8f Release notes blurb for change to bindpw requirements

- **PR** #43991: (*Ch3LL*) Add Security Notes to 2016.3.8 Release Notes @ *2017-10-09T22:00:25Z*
  - e9dfda2177 Merge pull request #43991 from Ch3LL/3.8_sec_2
  - 1977df8462 Add Security Notes to 2016.3.8 Release Notes
- **PR** #43968: (*rossengeorgiev*) fix zenoss state module not respecting test=true @ *2017-10-09T21:27:31Z*
  - **ISSUE** #42947: (*rossengeorgiev*) Zenoss state changes production state even when test=true | refs: #43968
  - 2346d2691e Merge pull request #43968 from rossengeorgiev/fix-zenoss-prod_state
  - e6d31c1ea6 fix zenoss state module not respecting test=true
- **PR** #43776: (*Ch3LL*) [2016.11] Bump latest and previous versions @ *2017-10-09T17:22:15Z*
  - 8d56a5ac45 Merge pull request #43776 from Ch3LL/2016.11.8_docs
  - f72bc00000 [2016.11] Bump latest and previous versions
- **PR** #43976: (*Ch3LL*) Add Security Notes to 2016.11.8 Release Notes @ *2017-10-09T17:20:54Z*
  - 21bf71c3f5 Merge pull request #43976 from Ch3LL/11.8_sec
  - f0c3184288 Add Security Notes to 2016.11.8 Release Notes
- **PR** #43973: (*terminalmage*) Fix grains.has_value when value is False @ *2017-10-09T14:59:20Z*
  - 1d5397ab5b Merge pull request #43973 from terminalmage/fix-grains.has_value
  - bf45ae6e6a Fix grains.has_value when value is False
- **PR** #43888: (*rallytime*) Back-port #43841 to 2016.11 @ *2017-10-05T20:09:58Z*
  - **PR** #43841: (*austinpapp*) add -n with netstat so we don't resolve IPs | refs: #43888
  - 9ac3f2ea7b Merge pull request #43888 from rallytime/bp-43841
  - 87d676f08a add -n with netstat so we don't resolve
- **PR** #43916: (*dereckson*) Fix typo in salt-cloud scaleway documentation @ *2017-10-05T18:58:00Z*
  - f880ac4c08 Merge pull request #43916 from dereckson/fix-typo-cloud-scaleway
  - 15b8b8a9f4 Fix typo in salt-cloud scaleway documentation
- **PR** #43884: (*UtahDave*) Update SaltConf banner per Rhett's request @ *2017-10-04T13:08:30Z*
  - 2ab7549d48 Merge pull request #43884 from UtahDave/2016.11local
  - e3b2857285 Merge branch `2016.11' into 2016.11local
- **PR** #43869: (*terminalmage*) Only join cmd if it's not a string @ *2017-10-03T16:25:07Z*
  - 4b882d4272 Merge pull request #43869 from terminalmage/issue43522
  - fe28b0d4fb Only join cmd if it's not a string
  - 8c671fd0c1 Update SaltConf banner per Rhett's request
- **PR** #43707: (*terminalmage*) Add missing support for use/use_in requisites to state.sls_id @ *2017-10-01T14:07:53Z*
  - **ISSUE** #43373: (*rgcosma*) use keyword breaks sls_id | refs: #43707
  - a2161efda3 Merge pull request #43707 from terminalmage/issue43373
  - 3ebde1895f Merge branch `2016.11' into issue43373
  - e580ed4caa Merge branch `2016.11' into issue43373

  - 5b3be6e8af Fix failing unit test
  - f73764481b Add missing support for use/use_in requisites to state.sls_id
- **PR** #43807: (*terminalmage*) cmdmod: Don't list-ify string commands on Windows @ *2017-09-29T02:48:36Z*
  - 85b3aa332a Merge pull request #43807 from terminalmage/issue43522
  - d8708bf698 cmdmod: Don't list-ify string commands on Windows
- **PR** #43768: (*vutny*) Fix Pylint deprecated option warnings @ *2017-09-28T12:27:36Z*
  - ea8d273c2b Merge pull request #43768 from vutny/fix-pylint-deprecation-warnings
  - f8b3fa9da1 Merge branch `2016.11' into fix-pylint-deprecation-warnings
- **PR** #43772: (*gtmanfred*) dont print Minion not responding with quiet @ *2017-09-27T15:39:18Z*
  - **ISSUE** #40311: (*cralston0*) --hide-timeout used with --output json --static produces unparseable JSON | refs: #43772
  - 1a8cc60bb4 Merge pull request #43772 from gtmanfred/2016.11
  - 0194c60960 dont print Minion not responding with quiet
- **PR** #43747: (*rallytime*) Add GPG Verification section to Contributing Docs @ *2017-09-26T21:25:37Z*
  - 9dee896fb9 Merge pull request #43747 from rallytime/gpg-verification
  - 7a70de19f4 Merge branch `2016.11' into gpg-verification
- **PR** #43733: (*terminalmage*) Allow docker_events engine to work with newer docker-py @ *2017-09-26T16:47:40Z*
  - **ISSUE** #43729: (*The-Loeki*) Docker events engine broken on newer docker.py | refs: #43733
  - 1cc3ad1c8d Merge pull request #43733 from terminalmage/issue43729
  - 6e5c99bda0 Allow docker_events engine to work with newer docker-py
- **PR** #43458: (*terminalmage*) Fix missing PER_REMOTE_ONLY in cache.clear_git_lock runner @ *2017-09-26T14:39:01Z*
  - **ISSUE** #42082: (*stamak*) [salt.utils.gitfs][CRITICAL] Invalid gitfs configuration parameter `saltenv' in remote git+ssh://git@ourgitserver/ourgitrepo.git. | refs: #43458
  - 5d38be4ff7 Merge pull request #43458 from terminalmage/issue42082
  - 5f90812b12 Fix missing PER_REMOTE_ONLY in cache.clear_git_lock runner
    - 23bb4a5dde Add GPG Verification section to Contributing Docs
- **PR** #43727: (*rallytime*) Revise ``Contributing'' docs: merge-forwards/release branches explained! @ *2017-09-26T12:43:16Z*
  - **ISSUE** #43650: (*rallytime*) Review contributing documentation and the merge-forward process | refs: #43727
  - **ISSUE** #42706: (*blarghmatey*) Parallel Cache Failure | refs: #43018
  - **PR** #43018: (*jubrad*) Update state.py | refs: #43727

  - 881f1822f2 Format fix code example local returner doc

20.2.11 Salt 2016.3.0 Release Notes - Codename Boron

Known Issues

> **Warning: Some Salt Masters may need to apply a patch for Default Job Cache to prevent a possible crash**
>
> An issue exists that prevents the Salt master from cleaning the default job cache. This issue can cause an over-consumption of resources resulting in a crash. 2016.3.0 Salt masters should apply the patch in :PR:`33555`. This issue will be addressed in 2016.3.1.

- issue 33516: When upgrading from 2015.8.10 to 2016.3.0 on centos7/redhat7 salt-minion must be restarted twice.
- issue 33517: SPM does not work on amazon linux 2015 in 2016.3.0.

Backwards-incompatible Changes

- The default path for the *extension_modules* master config option has been changed. Prior to this release, the location was a directory named `extmods` in the Salt cachedir. On most platforms, this would put the *extension_modules* directory in `/var/cache/salt/extmods`. It has been moved one directory down, into the master cachedir. On most platforms, this is `/var/cache/salt/master/extmods`. Most users won't have to worry about this, but those who have been manually placing custom runners into `/var/cache/salt/extmods/runners`, or outputters into `/var/cache/salt/extmods/output`, etc. will be affected by this. To transition, it is recommended not to simply move the extmods directory into `/var/cache/salt/master`, but to copy the custom modules into the salt fileserver under `salt://_runners`, `salt://_output`, etc. and sync them using the functions in the new *saltutil runner*.
- The `pkg.check_db` function has been removed for yum/dnf.

Core Changes

- The `onchanges` requisite now fires if **any** watched state changes. issue 19592.
- The `ext_pillar` functions **must** now accept a minion ID as the first argument. This stops the deprecation path started in Salt 0.17.x. Before this minion ID first argument was introduced, the minion ID could be retrieved accessing `__opts__['id']` losing the reference to the master ID initially set in opts. This is no longer the case, `__opts__['id']` will be kept as the master ID.
- Custom types can now be synced to the master using the new *saltutil runner*. Before, these needed to manually be placed under the *extension_modules* directory. This allows custom modules to easily be synced to the master to make them available when compiling Pillar data. Just place custom runners

into `salt://_runners`, custom outputters into `salt://_output`, etc. and use the functions from the *saltutil runner* to sync them.

- The `client_acl` configuration options were renamed to `publisher_acl`.
- Added a new `--config-dump` option (issue 26639).
- TCP Transport presence events were updated to work with a NAT (PR 30629).
- A *minion_pillar_cache* setting was added to save rendered pillar data to cachedir for later use when file_client is set to local (PR 30428).
- Added the ability for binary data (such as a license key) to be distributed via pillar using the *file.managed* (issue 9569).
- Scheduled jobs now include `success` and `retcode` (issue 24237).
- The `saltversioninfo` grain was changed from a string to a list to enable reading values by index. (PR 30082).
- A *pillar_merge_lists* option was added to enable recursively merging pillar lists by aggregating them instead of replacing them (PR 30062).
- Grain values reported by Debian 8 (jessie) when lsb-release is installed were updated for consistency (PR 28649).
- A new option for minions called master_tries has been added. This specifies the number of times a minion should attempt to contact a master to attempt a connection. This allows better handling of occasional master downtime in a multi-master topology.
- The default directory for deploying the salt-thin tarball has changed for salt-ssh. It is now /var/tmp instead of /tmp. Users may also wish to delete any directories in /tmp ending with *_salt/*. (issue 32771)

External Module Packaging

Modules may now be packaged via entry-points in setuptools. See external module packaging tutorial for more information.

Cloud Changes

- Refactored the OpenNebula driver and added numerous `--function` and `--action` commands to enhance Salt support for image, template, security group, virtual network and virtual machine management in OpenNebula.
- Added execution/state modules to support the deployment of AWS cognito identity pools (PR 31094).
- Added ability to set tags and listener policies on a AWS ELB (PR 27552).

Platform Changes

- Renamed modules related to macOS. The following module filenames were changed. The virtual name remained unchanged.
- **PR** #30558: renamed osxdesktop.py to mac_desktop.py
- **PR** #30557: renamed macports.py to mac_ports.py
- **PR** #30556: renamed darwin_sysctl.py to mac_sysctl.py
- **PR** #30555: renamed brew.py to mac_brew.py

- **PR** #30552: renamed darwin_pkgutil.py to mac_pkgutil.py

Package Support

- Ubuntu Xenial: Packages for Ubuntu Xenial (16.04) are available for 2016.3.0 and onwards. See repo.saltstack.com for more information. Note that Xenial comes with Debian's packaged version of Salt 2015.8.8 and official repo.saltstack.com packages are available for 2015.8 releases beginning with Salt 2015.8.11.

Proxy Minion Changes

The deprecated config option `enumerate_proxy_minions` has been removed.

As mentioned in earlier documentation, the `add_proxymodule_to_opts` configuration variable defaults to `False` in this release. This means if you have proxymodules or other code looking in `__opts__['proxymodule']` you will need to set this variable in your `/etc/salt/proxy` file, or modify your code to use the *__proxy__* injected variable.

The `__proxyenabled__` directive now only applies to grains and proxy modules themselves. Standard execution modules and state modules are not prevented from loading for proxy minions.

Support has been added to Salt's loader allowing custom proxymodules to be placed in `salt://_proxy`. Proxy minions that need these modules will need to be restarted to pick up any changes. A corresponding utility function, `saltutil.sync_proxymodules`, has been added to sync these modules to minions.

Enhancements in grains processing have made the `__proxyenabled__` directive somewhat redundant in dynamic grains code. It is still required, but best practices for the `__virtual__` function in grains files have changed. It is now recommended that the `__virtual__` functions check to make sure they are being loaded for the correct proxytype, example below:

```
def __virtual__():
    '''
    Only work on proxy
    '''
    try:
        if salt.utils.is_proxy() and \
           __opts__['proxy']['proxytype'] == 'ssh_sample':
            return __virtualname__
    except KeyError:
        pass

    return False
```

The try/except block above exists because grains are processed very early in the proxy minion startup process, sometimes earlier than the proxy key in the `__opts__` dictionary is populated.

Grains are loaded so early in startup that no dunder dictionaries are present, so `__proxy__`, `__salt__`, etc. are not available. Custom grains located in `/srv/salt/_grains` and in the salt install grains directory can now take a single argument, `proxy`, that is identical to `__proxy__`. This enables patterns like

```
def get_ip(proxy):
    '''
    Ask the remote device what IP it has
    '''
    return {'ip':proxy['proxymodulename.get_ip']()}
```

Then the grain `ip` will contain the result of calling the `get_ip()` function in the proxymodule called `proxymodulename`.

Proxy modules now benefit from including a function called `initialized()`. This function should return `True` if the proxy's `init()` function has been successfully called. This is needed to make grains processing easier.

Finally, if there is a function called `grains` in the proxymodule, it will be executed on proxy-minion startup and its contents will be merged with the rest of the proxy's grains. Since older proxy-minions might have used other methods to call such a function and add its results to grains, this is config-gated by a new proxy configuration option called `proxy_merge_grains_in_module`. This defaults to `False` in this release. It will default to True in the release after next. The next release is codenamed **Carbon**, the following is **Nitrogen**.

The example proxy minions `rest_sample` and `ssh_sample` have been updated to reflect these changes.

Syndic Updates

A major performance and management issue was found and fixed in the syndic. This makes the Salt Syndic substantially more reliable and performant. Please make sure that the syndic and the master of masters which syndics attach to are updated, otherwise the syndic fixes alone can cause minor performance issues with older master of masters. Please update masters first, then syndics. Minions do not need to be updated for this fix to work.

Module Changes

- *file execution module*: `show_diff` is deprecated in favor of `show_changes`. (PR 30988)
- *reg execution module*:
  - Removed the following deprecated functions from the reg module (PR 30956):
    - read_key
    - set_key
    - create_key
    - delete_key
  - Removed force parameter from reg state module
  - Fixed virtual function in state
  - Improved error information for `reg.delete_value` function
- *jboss7 execution module*: `deployed` function was decoupled from Artifactory by removing Artifactory-specific functionality. Note that the changes in some of the function arguments break existing state files, see issue 30515 and PR 3080 for details.
- *pkg state module*: The `wait` function was removed, the functionality was replaced with the `onchanges` requisite (PR 30297).
- *firewalld state module*: A `permanent` argument was added `add_port`. Note that `permanent` defaults to `True`, which changes previous behavior (PR 30275). A `bind` function was also added that allows binding zones to interfaces and sources (PR 29497).
- *journald beacon module*: The event string was updated to include a tag. Note this this might impact existing reactors based on this beacon. (PR 30116).
- *postgres_privileges state module*: The default value of the `prepend` argument was changed from `None` to `public`.
- *zenoss execution module*: The `add_device` function was updated with a default value of `1000` for `prod_state` to match the documentation (PR 28924).
- The etcd execution module, state module, returner module, and util module were refactor (PR 28599). This refactor changes error returns for several functions (primarily edge cases):

  - get: Used to return `' on key-not-found. Now returns None.
  - set: Used to return `' on issues setting keys. Now returns None.
  - ls: Used to return {path: {}} on key-not-found. Now returns None.
  - Tree: Used to return {} on key-not-found. Now returns None.
- *smartos_virt execution module*: Updated to use most of the new smartos_vmadm (PR 28284).
- *apache_conf state module*, *apache_module state module*, and *apache_site state module*: the `enable` and `disable` functions were renamed to `enabled` and `disabled`, respectively. In PR 33562, these functions were readded and properly deprecated and will be removed in Salt Nitrogen. This fix will be available in 2016.3.1. As a workaround, try

```
apache_module.enable{{ 'd' if grains.saltversioninfo == [2016, 3, 0] else '' }}
```

New Features

Thorium - Provisional New Reactor

The 2016.3 release introduces the new Thorium Reactor. This reactor is an experimental new feature that implements a flow programming interface using the salt state system as the engine. This means that the Thorium reactor uses a classic state tree approach to create a reactor that can aggregate event data from multiple sources and make aggregate decisions about executing reactions.

This feature is both experimental and provisional, it may be removed and APIs may be changed. This system should be considered as ambitious as the Salt State System in that the scope of adding a programmable logic engine of this scale into the event systems is non trivial.

See Thorium Complex Reactor.

Improved Mac OS Support

Improved Solaris Support

A lot of work was done to improve support for SmartOS. This work also resulted in improvements for Solaris and illumos as SmartOS.

- rewrite of *vmadm module* (SmartOS)
- rewrite of *imgadm module* (SmartOS)
- deprecation of *virt module* in favor of vmadm (SmartOS)
- implemented *smartos state* (SmartOS)
- improved *zpool module* add SmartOS, illumos and Solaris support
- improved *zfs module* add SmartOS, illumos and Solaris support
- implemented *zpool state*
- implemented *zfs state* implemented *solaris_system* system module to provide better Solaris support (PR 30519)
- other minor fixes to grains, localmod, ...

Tornado Transport

Important: The Tornado Transport wire protocol was changed in 2016.3, making it incompatible with 2015.8 (PR 29339).

Windows DSC Integration (Experiemental)

Dimension Data Cloud Support

A SaltStack Cloud driver for Dimension Data Public Cloud, provides the driver functionality to service automation for any of the Dimension Data Public Cloud locations:

- Deploy new virtual machines
- List and query virtual machine images
- Destroy and query virtual machines

Documentation of the Dimension Data SaltStack integration is found on developer.dimensiondata.com

Minion Blackout

During a blackout, minions will not execute any remote execution commands, except for `saltutil.refresh_pillar`. Blackouts are enabled using a special pillar key, `minion_blackout` set to `True`.

See *Minion Blackout*.

Splunk Returner

A Splunk Returner that uses HTTP Event Collector is now available (PR 30718).

SQLCipher Pillar Module

Support was added for retrieving pillar data via queries to SQLCiper databases (PR 29782).

New Modules

The following list contains a link to the new modules added in this release.

Beacons

- `beacons.adb`
- `beacons.glxinfo`
- `beacons.memusage`
- `beacons.network_settings`

- *beacons.proxy_example*
- *beacons.salt_proxy*

Engines

- *engines.docker_events*
- *engines.redis_sentinel*
- *engines.slack*
- *engines.sqs_events*
- *engines.thorium*

Execution Modules

- *modules.bcache*
- *modules.beacons*
- *modules.boto_cloudtrail*
- *modules.boto_datapipeline*
- *modules.boto_iot*
- *modules.boto_lambda*
- *modules.boto_s3_bucket*
- *modules.chronos*
- modules.cytest
- *modules.dockercompose*
- modules.dsc
- *modules.ethtool*
- *modules.github*
- *modules.infoblox*
- *modules.iwtools*
- *modules.jenkins*
- *modules.linux_ip*
- *modules.mac_assistive*
- *modules.mac_brew*
- *modules.mac_defaults*
- *modules.mac_desktop*
- *modules.mac_keychain*
- *modules.mac_pkgutil*
- *modules.mac_ports*

- *modules.mac_power*
- *modules.mac_service*
- *modules.mac_shadow*
- *modules.mac_softwareupdate*
- *modules.mac_sysctl*
- *modules.mac_system*
- *modules.mac_timezone*
- *modules.mac_xattr*
- *modules.marathon*
- *modules.minion*
- *modules.openvswitch*
- *modules.opkg*
- *modules.philips_hue*
- *modules.proxy*
- *modules.pushbullet*
- *modules.restartcheck*
- *modules.s6*
- *modules.salt_proxy*
- *modules.ssh_package*
- *modules.ssh_service*
- *modules.sysfs*
- *modules.vboxmanage*
- *modules.win_certutil*
- *modules.win_dism*
- *modules.win_dism*
- *modules.win_license*
- *modules.win_iis*
- *modules.win_task*
- *modules.zabbix*

Pillar

- *pillar.http_yaml*
- *pillar.stack*

Proxy

- *proxy.chronos*
- *proxy.junos*
- *proxy.marathon*
- proxy.phillips_hue
- *proxy.ssh_sample*

Roster

- *roster.range*

States

- *states.apache_conf*
- *states.apache_site*
- *states.boto_cloudtrail*
- *states.boto_datapipeline*
- *states.boto_iot*
- states.boto_lamda
- *states.boto_s3_bucket*
- *states.chocolatey*
- *states.chronos_job*
- *states.firewall*
- *states.github*
- *states.gpg*
- *states.grafana_dashboard*
- *states.grafana_datasource*
- *states.infoblox*
- *states.jenkins*
- *states.mac_assistive*
- *states.mac_defaults*
- *states.mac_keychain*
- *states.mac_xattr*
- *states.marathon_app*
- *states.openvswitch_bridge*
- *states.openvswitch_port*
- *states.postgres_cluster*

- `states.proxy`
- `states.salt_proxy`
- `states.virt`
- `states.win_certutil`
- `states.win_dism`
- `states.win_license`
- `states.zabbix_host`
- `states.zabbix_hostgroup`
- `states.zabbix_user`
- `states.zabbix_usergroup`

20.2.12 Salt 2016.3.1 Release Notes

Version 2016.3.1 is a bugfix release for *2016.3.0*.

Final Release of Debian 7 Packages

Regular security support for Debian 7 ended on April 25th 2016. As a result, 2016.3.1 and 2015.8.10 will be the last Salt releases for which Debian 7 packages are created.

Changes for v2016.3.0..v2016.3.1

Extended changelog courtesy of Todd Stansell (https://github.com/tjstansell/salt-changelogs):

Generated at: 2016-06-08T22:43:50Z

Total Merges: **87**

Changes:

- **PR** #33866: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #33860: (*cachedout*) Allow socket closes when the socket is disconnected
- b183a36 Set master and cloud to log level warning (#33861)
- **PR** #33698: (*opdude*) Vsphere fixes
- **PR** #33771: (*twangboy*) Additional functionality to win_dism.py
- **PR** #33851: (*ticosax*) [dockerng] Add support for edge case when *Cmd* and *Entrypoint* can't be blanked
- **PR** #33821: (*cachedout*) Restore default log level to warning
- **PR** #33767: (*amontalban*) Fix #33604 implementation when `geom disk list' does not output rotat...
- **PR** #33806: (*cachedout*) Work around upstream cherrypy bug
- **PR** #33776: (*danslimmon*) Fixed ACL user comparison. Resolves #33754.
- **PR** #33763: (*abednarik*) Insert --no-refresh before install in Zypper.
- **PR** #33764: (*terminalmage*) Merge instead of update pillar overrides
- **PR** #33772: (*danslimmon*) Fixed spelling of ``through''
- **PR** #33651: (*cachedout*) Restore grains context to renderers

- **PR** #33757: (*cachedout*) Reminder not to return non-serializable data from states
- **PR** #33670: (*rallytime*) Handle non-ascii package names in state.format_log
- **PR** #33723: (*rallytime*) Back-port #33641 to 2016.3
- **PR** #33748: (*ticosax*) HostConfig has been introduced by docker api version 1.15
- **PR** #33745: (*eliasp*) Typo (*privilages* → *privileges*)
- **PR** #33562: (*jfindlay*) states.apache_*: readd and deprecate enable and disable
- **PR** #33659: (*danslimmon*) Added test mode to states.dockerng. Resolves #33632.
- **PR** #33696: (*clburlison*) Update mac native package for upcoming release
- **PR** #33710: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- e87c310 backport #33599 to 2016.3 (#33682)
- 377556a Undo __repr__() and __str__() parts of d5a7dcc (#33688)
- 778b290 Remove explicit PW column default from mysql_user (#33690)
- **PR** #33680: (*rallytime*) Back-port #32942 to 2016.3
- **PR** #33677: (*twangboy*) Pass kwargs to cmd.run
- **PR** #33648: (*terminalmage*) salt.modules.pkgng: Fix incorrect usage of _pkg()
- **PR** #33646: (*jfindlay*) Fix more tmp paths on MacOS
- **PR** #33656: (*cachedout*) Fix indentation error in minion.py
- **PR** #33637: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- b7230bd Back-port #33613 to 2016.3 (#33638)
- **PR** #33606: (*danslimmon*) Fixed ini.options_absent. Resolves #33590.
- **PR** #33604: (*kev009*) Fix #33578 disks grain
- 259529e Use correct state name in libvirt formula doc (#33631)
- **PR** #33603: (*sjorge*) allow esky packages to be build on base64 2015Q4
- **PR** #33576: (*tomlaredo*) Fix #33565 (typo causes invalid syntax)
- **PR** #33549: (*thatch45*) Fix for #33530
- **PR** #33538: (*anlutro*) Fix a KeyError if group is provided but not user in cmd states
- **PR** #33550: (*jacobhammons*) Fixes display of thorium docs
- **PR** #33509: (*twangboy*) Detect System Architecture for Mac Build
- **PR** #33522: (*jfindlay*) rework modules.mac_brew.latest_version to work around brew version inconsistency
- **PR** #33519: (*jacobhammons*) New doc site layout, 2016.3.0 release note known issue additions
- **PR** #33508: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #33505: (*twangboy*) Fix build script where pip didn't work
- **PR** #33076: (*cachedout*) Avoid second grains load on windows multiprocessing

20.2.13 Salt 2016.3.2 Release Notes

Version 2016.3.2 is a bugfix release for *2016.3.0*.

Returner Changes

- Any returner which implements a `save_load` function is now required to accept a `minions` keyword argument. All returners which ship with Salt have been modified to do so.

Changes for v2016.3.1..2016.3.2

Extended changelog courtesy of Todd Stansell (https://github.com/tjstansell/salt-changelogs):

Generated at: 2016-07-27T15:47:45Z

Statistics:

- Total Merges: **198**

Changes:

- **PR** #34946: (*anlutro*) Fix virtualenv behavior when requirements files are in subdirectories
- **PR** #34957: (*sjmh*) Don't fall through to checking auth entries
- **PR** #34971: (*cachedout*) Increase timeout for grains test
- **PR** #34951: (*vutny*) Fix #34873
- **PR** #34935: (*rallytime*) Avoid UnboundLocalError in beacons module
- **PR** #34956: (*cachedout*) Increase all run_script timeouts to 30s
- **PR** #34933: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #34916: (*cachedout*) Master performance improvement
- **PR** #34911: (*cachedout*) Backport #34906
- **PR** #34906: (*cachedout*) Set timeout for run_salt in test suite
- **PR** #34898: (*hrumph*) Stop multiple refreshes during call to pkg.list_upgrades
- **PR** #34915: (*abednarik*) Update service_rh provider to exclude XenServer >= 7.
- **PR** #34926: (*rallytime*) Lint #34923
- **PR** #34923: (*eliasp*) Handle exception when no Slack API key was provided
- **PR** #34910: (*cachedout*) Fix grains error on proxy minions
- **PR** #34864: (*jmacfar*) Check for version in list of installed versions
- **PR** #34902: (*rallytime*) Back-port #34878 to 2016.3
- **PR** #34878: (*abednarik*) Add VirtuozzoLinux is yumpkg enable list.
- **PR** #34901: (*rallytime*) Add VirtuozzoLinux to the list of enabled distros for rpm.py
- **PR** #34900: (*rallytime*) Add VirtuozzoLinux to enabled platforms list in rh_service.py
- **PR** #34887: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #34869: (*terminalmage*) Fail git.latest states with uncommitted changes when force_reset=False
- **PR** #34862: (*thatch45*) Fix salt-ssh cacheing issue
- **PR** #34859: (*cachedout*) Fix wheel test
- **PR** #34632: (*eliasp*) Try to create the log directory when not present yet
- **PR** #34854: (*rallytime*) Remove string_types import from state compiler

- **PR** #34865: (*thatch45*) This needs discussion, since this breaks SUSE
- **PR** #34858: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #34847: (*cachedout*) Add an option to skip the verification of client_acl users
- **PR** #34833: (*rallytime*) Back-port #28521 to 2015.8
- **PR** #34828: (*thatch45*) Fix #34648
- **PR** #34827: (*thatch45*) fix beacon list to include all beacons being processed
- **PR** #34823: (*rallytime*) Back-port #25276 to 2015.8
- **PR** #34822: (*thatch45*) Fix salt-ssh state.high and state.low
- **PR** #28521: (*gongled*) SPM: packaging doesn't work in Python 2.6. Fixed.
- **PR** #25276: (*jacobhammons*) copy spm.1 man page during setup
- **PR** #34852: (*rallytime*) Skip GCE unit tests - causes test suite to hang
- **PR** #34844: (*vutny*) Fix getting total available memory without *psutil* installed
- **PR** #34837: (*thatch45*) Fix #34345
- **PR** #34838: (*thatch45*) Check if a valid value is passed to unlyif/unless
- **PR** #34840: (*thatch45*) update the state wrapper to include show_low_sls
- **PR** #34842: (*sjorge*) 2016.3 zpool cleanup and fixes
- **PR** #34770: (*aphor*) zpool state module needs support for disk vdev #34762
- **PR** #34825: (*thatch45*) keep this beacon from stack tracing at the loader
- **PR** #34824: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #34818: (*jtand*) Skip mysql state test if mysqladmin is not available
- **PR** #34803: (*junovitch*) salt/state.py: set **`chunk['order'] = 0' with `order: first'; fixes `#24744`_**
- **PR** #34642: (*jtand*) Check that mysqladmin exists before running mysql integration tests
- **PR** #34670: (*isbm*) Add ``osmajorrelease'' grain (2016.3)
- **PR** #34683: (*cachedout*) Fix publisher leak
- **PR** #34791: (*sjorge*) salt.state.zpool tweaks
- **PR** #34784: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #34773: (*randomed*) Bugfix: Startup states on minions are not being written to mysql returner
- **PR** #34754: (*cachedout*) Disable test
- **PR** #34751: (*cachedout*) Remove unnedeed config test
- **PR** #34741: (*rallytime*) Back-port #34726 to 2015.8
- **PR** #34726: (*martinhoefling*) Always loop over updated keys in non recursive update
- **PR** #34606: (*isbm*) Bugfix: Exit on configuration read (backport)
- **PR** #34756: (*jacobhammons*) Rebuild man pages
- **PR** #34746: (*rallytime*) Update azure lib dep to match the one in cloud.clouds.msazure
- **PR** #34744: (*jtand*) Test valid docs fix
- **PR** #34740: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3

- **PR** #34721: (*rallytime*) Add output_file option to master config docs
- **PR** #34607: (*isbm*) Bugfix: Exit on configuration read (backport)
- **PR** #34739: (*cachedout*) Remove unnedeed config test
- **PR** #34607: (*isbm*) Bugfix: Exit on configuration read (backport)
- **PR** #34722: (*rallytime*) Various spelling fixes
- **PR** #34714: (*sjmh*) Fix ldap auth for function matches
- **PR** #34720: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #34695: (*isbm*) Bugfix: Zypper *pkg.list_products* returns False on some empty values (2015.8)
- **PR** #34689: (*Azidburn*) fix second run problems with pkg.installed using sources
- **PR** #34682: (*jfindlay*) update 2015.8.11 release notes
- **PR** #34707: (*rallytime*) Add versionadded to ``special'' option in cron.present state
- **PR** #34696: (*isbm*) Bugfix: Zypper *pkg.list_products* returns False on some empty values (2016.3)
- **PR** #34702: (*farcaller*) Fixed dockerng.list_tags
- **PR** #34681: (*rallytime*) Back-port #34549 to 2016.3
- **PR** #34549: (*Inveracity*) fixes multiple values in mof configuration
- **PR** #34679: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #34676: (*cachedout*) Revert ``Modify lodaer global test to use populated dunders''
- **PR** #34651: (*rallytime*) Lint 34644
- **PR** #34647: (*cachedout*) Adjust the mine test a little bit to give it a better chance of success
- **PR** #34644: (*cachedout*) Cleanup loader errors
- **PR** #34642: (*jtand*) Check that mysqladmin exists before running mysql integration tests
- **PR** #34618: (*jtand*) Network state integration test test=True
- **PR** #34601: (*lorengordon*) Clarifies the proper way to reference states
- **PR** #34605: (*gtmanfred*) catch error if no dns domains exist
- **PR** #34557: (*jacobweinstock*) handle jboss cli expression type in the parsing of output
- **PR** #34652: (*rallytime*) Spelling fixes found in sqlite3 pillar docs
- **PR** #34565: (*Ch3LL*) add num_cpus grain to freebsd
- **PR** #34621: (*jtand*) Suse Leap doesn't have `man'
- **PR** #34619: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #34617: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #34593: (*rallytime*) Back-port #33851 to 2015.8
- **PR** #34592: (*jtand*) Update github IP for ssh state integration tests
- **PR** #34591: (*jtand*) Gate docker unit test to check for docker
- **PR** #34590: (*oeuftete*) [2015.8] dockerng: When sorting list actual_data, make it a list
- **PR** #34584: (*rallytime*) [2015.5] Avoid circular imports when calling salt.utils functions
- **PR** #34560: (*terminalmage*) Add a bunch of documentation on getting files from other environments

- **PR** #34545: (*terminalmage*) Handle cases where Docker Remote API returns an empty ExecutionDriver
- **PR** #34531: (*terminalmage*) Support ignore_epoch argument in version comparisons
- **PR** #33851: (*ticosax*) [dockerng] Add support for edge case when *Cmd* and *Entrypoint* can't be blanked
- **PR** #34585: (*rallytime*) [2016.3] Avoid salt.utils circular imports when using ``from''
- **PR** #34616: (*jacobhammons*) Adds a mock required for the network settings beacon
- **PR** #34553: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #34546: (*rallytime*) Rename unit.states.boto_secgroup to unit.states.boto_secgroup_test
- **PR** #34537: (*rallytime*) Rename tests.unit.simple to tests.unit.simple_test
- **PR** #34527: (*rallytime*) [2015.8] Update bootstrap script to latest stable
- **PR** #34521: (*cachedout*) Prevent many errors in the test suite in loader tests
- **PR** #34518: (*terminalmage*) Fix pkg.latest integration test for non-LTS ubuntu
- **PR** #34507: (*AAbouZaid*) Fix wrong order of retention_policy_exists.
- **PR** #34569: (*eliasp*) Minor doc fixes for PostgreSQL states
- **PR** #34524: (*terminalmage*) yumpkg: Avoid spurious logging in pkg.upgrade
- **PR** #34490: (*cachedout*) Fix master crash on ctl-c for long-running job
- **PR** #34520: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #34513: (*cachedout*) Lower the log level for modules which cannot be loaded to trace
- **PR** #34505: (*terminalmage*) Improve top file merging documentation
- **PR** #34503: (*rallytime*) Rename some unit test files by adding _test
- **PR** #34498: (*rallytime*) Use -O in the wget example in the bootstrap tutorial for the develop branch
- **PR** #34492: (*zer0def*) Gracefully handle non-XML output in GlusterFS execution module.
- **PR** #34489: (*jtand*) Use skipTest for network state integration test
- **PR** #34488: (*rallytime*) Update dnsmasq.get_config docs to use correct config_file param.
- **PR** #34499: (*gtmanfred*) remove unnecessary block parsing ip addrs for nova
- **PR** #34468: (*twangboy*) Use Python 2.7.12 for Windows Build
- **PR** #34493: (*twangboy*) Use Python 2.7.12 for Mac Build
- **PR** #34486: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #34467: (*rallytime*) Back-port #34457 to 2015.8
- **PR** #34462: (*terminalmage*) Use --always when available to git describe
- **PR** #34457: (*ryan-lane*) Only access key metadata if we found key metadata
- **PR** #34455: (*cro*) Forgot reference to inotify
- **PR** #34432: (*twangboy*) Fix file.append
- **PR** #34429: (*terminalmage*) Skip version checking for targeted packages in pkg.latest state
- **PR** #34459: (*terminalmage*) Ignore retcode when formatting highstate output
- **PR** #34463: (*terminalmage*) states/git: pass required cwd parameter to git.describe.
- **PR** #34466: (*rallytime*) Back-port #34436 to 2016.3

- **PR** #34436: (*artxki*) Fix #34395 Nonfunctional default_password in states.postgres_user.present
- **PR** #34453: (*jtand*) Arch linux does not have osrelease or osmajorrelease grains
- **PR** #34456: (*thatch45*) Be more careful when making the SMinion
- **PR** #34452: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #34451: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #34435: (*cachedout*) Backport change to integraiton test suite
- **PR** #34426: (*cro*) Document that inotify is Linux only
- **PR** #34401: (*terminalmage*) Use rpmdev-vercmp as a fallback for version comparison on RHEL5
- **PR** #34366: (*steverweber*) Update service.py
- **PR** #34427: (*twangboy*) Automated signing fixes for Ubuntu 16.04, 14.04, 12.04 (for dmurphy)
- **PR** #34400: (*cachedout*) Fix uninitialized value
- **PR** #34404: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #34392: (*cro*) Clarify that salt-cloud doesn't get installed by bootstrap
- **PR** #34377: (*terminalmage*) Optimize pkg integration tests and add a couple new tests
- **PR** #34373: (*jtand*) Network state integration test
- **PR** #34292: (*twangboy*) Fix runas function for System Account
- **PR** #34388: (*rallytime*) Back-port #34378 to 2016.3
- **PR** #34378: (*adelcast*) network_settings.py: fix documentation
- **PR** #34352: (*cro*) Esxi dvs
- **PR** #34386: (*rallytime*) Beacon network docs
- **PR** #34376: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #34368: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #34344: (*rallytime*) Back-port #34324 to 2015.8
- **PR** #34342: (*rallytime*) Back-port #34316 to 2015.8
- **PR** #34324: (*cachedout*) Test custom grains matcher
- **PR** #34316: (*edgan*) Making salt-ssh pass proper return codes for jinja rendering errors
- **PR** #34252: (*gtmanfred*) return list of nodes for lxc driver when called directly

- **PR** #34319: (*rallytime*) Back-port #34244 to 2015.8
- **PR** #34313: (*rallytime*) [2015.5] Update to latest bootstrap script v2016.06.27

- **PR** #34312: (*rallytime*) [2015.8] Update to latest bootstrap script v2016.06.27
- **PR** #34307: (*rallytime*) Fix test example in integration testing docs
- **PR** #34306: (*ghedo*) Fix iptables.flush state: Do not force `filter' table when flushing
- **PR** #34244: (*the-glu*) Typo in dockerio doc
- **PR** #34343: (*rallytime*) Back-port #34256 to 2016.3
- **PR** #34256: (*tmehlinger*) detect running from master in State.event method
- **PR** #34338: (*themalkolm*) Add listen/listen_in support to stateconf.py
- **PR** #34283: (*sjorge*) 2016.3 mount vfstab support
- **PR** #34322: (*Ch3LL*) add osmajorrelease grain for raspbian
- **PR** #34337: (*clinta*) Change merge-if-exists logic to properly report changes
- **PR** #34300: (*vutny*) Make apache.configfile state handle the Options list correctly
- **PR** #34333: (*rallytime*) Back-port #33734 to 2016.3
- **PR** #34304: (*rallytime*) Back-port #33734 to 2016.3
- **PR** #33734: (*glomium*) modules/rabbitmq.py version checking had a logical error
- **PR** #34330: (*clinta*) fix #34329
- **PR** #34318: (*rallytime*) Back-port #32182 to 2016.3
- **PR** #32182: (*dongweiming*) Fix psutil.cpu_times unpack error
- **PR** #34311: (*rallytime*) [2016.3] Update to latest bootstrap script v2016.06.27
- **PR** #34284: (*rallytime*) Don't require `domain' to be present before checking fqdn_ip* grains
- **PR** #34296: (*sjorge*) 2016.3 status module now works on Solaris like platforms
- **PR** #34281: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #34274: (*clinta*) Don't escape source before calling managed
- **PR** #34258: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #34257: (*rallytime*) Use `config_dir' setting instead of CONFIG_DIR in gpg renderer
- **PR** #34233: (*thegoodduke*) ipset: fix the comment containing blank
- **PR** #34232: (*thegoodduke*) ipset: fix commont containing blank
- **PR** #34225: (*richardscollin*) Fix win_system.set_system_date_time
- **PR** #34271: (*opdude*) Fixed symlinks on windows where the slashes don't match
- **PR** #34254: (*sjorge*) Fix for #14915
- **PR** #34259: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #34136: (*meaksh*) Fixed behavior for SUSE OS grains in 2015.8
- **PR** #34134: (*meaksh*) Fixed behavior for SUSE OS grains in 2016.3
- **PR** #34093: (*terminalmage*) Catch CommandExecutionError in pkg states
- **PR** #33903: (*meaksh*) Fetching grains['os'] from /etc/os-release on SUSE systems if it is possible
- **PR** #34134: (*meaksh*) Fixed behavior for SUSE OS grains in 2016.3
- **PR** #33903: (*meaksh*) Fetching grains['os'] from /etc/os-release on SUSE systems if it is possible

- **PR** #34159: (*christoe*) Fixes to the win_task module
- **PR** #34223: (*peterdemin*) Fixed typo in filtering LDAP's potential_ous
- **PR** #34239: (*vutny*) file.find module: fix handling of broken symlinks
- **PR** #34229: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #34218: (*terminalmage*) Fix a pair of gitfs bugs
- **PR** #34208: (*lomeroe*) fix regression from #33681 which causes pulling a list of s3 objects ...
- **PR** #34206: (*terminalmage*) Change target for dockerng assuming default status to Nitrogen release
- **PR** #34188: (*terminalmage*) Clarify pkg.list_repo_pkgs docstring for held packages
- **PR** #34182: (*rallytime*) Handle child PIDs differently depending on the availability of psutils
- **PR** #33942: (*cachedout*) ZD 762
- **PR** #33681: (*rallytime*) Back-port #33599 to 2015.8
- **PR** #33599: (*lomeroe*) Fix s3 large file download
- **PR** #34214: (*rallytime*) Update saltutil.wheel docs to specify remote vs local minion behavior
- **PR** #34209: (*lomeroe*) fix regression in s3.query from #33682
- **PR** #33682: (*lomeroe*) backport #33599 to 2016.3
- **PR** #33599: (*lomeroe*) Fix s3 large file download
- **PR** #34222: (*cachedout*) Lint 34200
- **PR** #34200: (*secumod*) Fix parted module set CLI example
- **PR** #34197: (*eliasp*) Make *module.ssh.recv_known_host()* more resilient against hosts not returning a key
- **PR** #34201: (*DarkKnightCZ*) Suffix temp file with .sr1 and add mandatory argument when executing PowerShell script
- **PR** #34198: (*DarkKnightCZ*) Don't use binary mode for cmdmod.exec_code
- **PR** #34198: (*DarkKnightCZ*) Don't use binary mode for cmdmod.exec_code
- **PR** #34172: (*dmurphy18*) Support for building with local packages on Debian and Ubuntu
- **PR** #34194: (*vutny*) Correct the docstrings formatting in pkgbuild modules and state
- **PR** #34056: (*vutny*) Make rpmbuild module work on non-RPM based GNU/Linux systems
- **PR** #34186: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #34184: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #34179: (*terminalmage*) Raise the correct exception when gitfs lockfile is empty
- **PR** #34178: (*terminalmage*) Remove unnecesssary comment
- **PR** #34176: (*rallytime*) Back-port #34103 to 2015.8
- **PR** #34175: (*rallytime*) Back-port #34128 to 2015.8
- **PR** #34174: (*rallytime*) Back-port #34066 to 2015.8
- **PR** #34165: (*mcalmer*) fix salt --summary to count not responding minions correctly
- **PR** #34141: (*jtand*) Fixed boto_vpc_test failure
- **PR** #34128: (*bebehei*) doc: add missing dot

- **PR** #34103: (*morganwillcock*) Fix diskusage beacon
- **PR** #34077: (*rallytime*) Add some grains targeting tests
- **PR** #34066: (*complexsplit*) Typo fix
- **PR** #33474: (*cachedout*) Fix diskusage beacon
- **PR** #34173: (*rallytime*) Update docs to match log_level default
- **PR** #34095: (*rallytime*) Back-port #32396 to 2016.3
- **PR** #32396: (*eradman*) Unbreak cron.file
- **PR** #34108: (*l2ol33rt*) Make dockerng.absent state honor test=true
- **PR** #34133: (*rallytime*) Back-port #34057 to 2016.3
- **PR** #34057: (*ajacoutot*) _active_mounts_openbsd: unbreak output for special filesystems
- **PR** #34156: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #34142: (*isbm*) Move log message from INFO to DEBUG.
- **PR** #34100: (*terminalmage*) Update documentation on ``refresh'' behavior in pkg states
- **PR** #34072: (*jfindlay*) modules.pkg int tests: skip refresh_db upon error
- **PR** #34110: (*garethgreenaway*) Fixes to git module & state module related to identity file
- **PR** #34138: (*rallytime*) Update package dep note to systemd-python for RHEL7 install
- **PR** #34166: (*vutny*) Fix YAML indentation in Apache state docstrings
- **PR** #34098: (*terminalmage*) Restore old refresh logic
- **PR** #34087: (*bbinet*) Encourage to report issues to upstream PillarStack project
- **PR** #34075: (*jfindlay*) modules.inspectlib.kiwiproc: import gate lxml
- **PR** #34056: (*vutny*) Make rpmbuild module work on non-RPM based GNU/Linux systems
- **PR** #34073: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #34069: (*rallytime*) Add a test to check for disconnected minion messaging
- **PR** #34051: (*tegbert*) Fixed a bug in the consul.py module that was preventing services
- **PR** #34048: (*terminalmage*) RFC: proposed fix for multiple fileserver updates in masterless runs
- **PR** #34045: (*jacobhammons*) Updated latest release version
- **PR** #34030: (*vutny*) More YAML indentation fixes in state module examples
- **PR** #34020: (*twangboy*) Always make changes to minion config if set (2015.8)
- **PR** #34018: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #34011: (*rallytime*) Back-port #33948 and #34009 to 2015.8
- **PR** #34009: (*rallytime*) Back-port #33948 to 2016.3 + add log message
- **PR** #34005: (*rallytime*) Lint fix for #34000
- **PR** #34003: (*vutny*) states.file: fix indentation in YAML examples
- **PR** #34002: (*lorengordon*) Remove loader test for pam module
- **PR** #34000: (*cachedout*) Fix incorrectly written test
- **PR** #33990: (*jacobhammons*) Adds links to several current Salt-related projects

- **PR** #33985: (*rallytime*) Write some more simple batch command tests
- **PR** #33984: (*jfindlay*) Add docs and tests to disk state
- **PR** #33983: (*twangboy*) Clarify the *account_exists* parameter
- **PR** #33953: (*whiteinge*) Add loader.utils() example to calling minion_mods
- **PR** #33951: (*jfindlay*) modules.gem int tests: more fixes
- **PR** #33948: (*cachedout*) Save an entire minion cache traversal on each master pub
- **PR** #33904: (*rallytime*) Back-port #33806 to 2015.5
- **PR** #33880: (*terminalmage*) pkg.uptodate: Pass kwargs to pkg.list_upgrades
- **PR** #33806: (*cachedout*) Work around upstream cherrypy bug
- **PR** #33684: (*jfindlay*) add acl unit tests
- **PR** #34010: (*terminalmage*) Do not cache remote files if they are already cached
- **PR** #34009: (*rallytime*) Back-port #33948 to 2016.3 + add log message
- **PR** #33948: (*cachedout*) Save an entire minion cache traversal on each master pub
- **PR** #33941: (*cachedout*) Don't call os.getppid() on Windows
- **PR** #34067: (*jacobhammons*) Fixes doc refresh bug on chrome mobile.
- **PR** #34050: (*rallytime*) Back-port #34026 to 2016.3
- **PR** #34026: (*bensherman*) removed method that doesn't exist
- **PR** #33987: (*isbm*) inspectlib cleanup
- **PR** #34042: (*sjorge*) fix #34038
- **PR** #34025: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #34044: (*jacobhammons*) Updated latest release to 2016.3.1
- **PR** #34014: (*jnhmcknight*) fix launch config creation params
- **PR** #34021: (*twangboy*) Always make changes to minion config if set (2016.3)
- **PR** #34031: (*eliasp*) *states.postgres_privileges* expects a real list, not a comma-separated string
- **PR** #33995: (*jacobhammons*) Understanding Jinja topic, Jinja doc issues.
- **PR** #33900: (*amendlik*) Document sudo policy for gitfs post-recieve hook
- **PR** #33980: (*twangboy*) Use full path to python.exe
- **PR** #33993: (*s0undt3ch*) Call *sys.exit()* instead of *exit()*
- **PR** #33976: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #33962: (*jacobhammons*) Adds a ``Generated on <timestamp>'' line to the html footer
- **PR** #33952: (*rallytime*) Add base argument to salt-ssh grains wrapper for filter_by func
- **PR** #33946: (*rallytime*) Back-port #33698 to 2015.8
- **PR** #33942: (*cachedout*) ZD 762
- **PR** #33698: (*opdude*) Vsphere fixes
- **PR** #33912: (*abalashov*) utils/schedule.py:handle_func() - Fix for accessing returner configur…
- **PR** #33945: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3

- **PR** #33936: (*rallytime*) Add connecting_settings to boto_elb state attributes list
- **PR** #33917: (*techhat*) Wait for up to a minute for sync_after_install
- **PR** #33888: (*jfindlay*) random.org checks
- **PR** #33877: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #33833: (*terminalmage*) Support syncing pillar modules to masterless minions
- **PR** #33829: (*terminalmage*) Update versionchanged directive
- **PR** #33814: (*terminalmage*) Support extraction of XZ archives in archive.extracted state
- **PR** #33778: (*sodium-chloride*) Fix minor docstring issues
- **PR** #33765: (*cachedout*) Correct issue with ping on rotate with minion cache
- **PR** #33726: (*jtand*) glance.warn_until shouldn't be checked for a doc string
- **PR** #33611: (*rolffokkens*) 2015.5
- **PR** #33960: (*mecarus*) Fix mongo get_load to return full mongo record instead of non-existant `load' key
- **PR** #33961: (*jacobhammons*) 2016.3.0 known issues update
- **PR** #33908: (*ticosax*) [boto_lambda] handle omitted Permissions parameter
- **PR** #33896: (*DmitryKuzmenko*) Don't deep copy context dict values.
- **PR** #33905: (*rallytime*) Back-port #33847 to 2016.3
- **PR** #33910: (*cachedout*) Ensure tht pillar have freshest grains
- **PR** #33870: (*rallytime*) Add note about Xenial packages to 2016.3.0 release notes
- **PR** #33847: (*whiteinge*) Add docs for arg/kwarg eauth matching
- **PR** #33076: (*cachedout*) Avoid second grains load on windows multiprocessing
- **PR** #29153: (*DmitryKuzmenko*) ACL limit args

20.2.14 Salt 2016.3.3 Release Notes

Version 2016.3.3 is a bugfix release for *2016.3.0*.

Known Issues

issue 36055: Salt Cloud events (`salt/cloud`) are not generated on the master event bus when provisioning cloud systems.

Bootstrap Issue #973: `python-futures` is not installed when installing from a git tag on RedHat-based distributions. `Python futures` is needed when running Salt with the TCP transport. This is fixed on the `develop` branch of the salt-bootstrap repo and the fix will be included in the upcoming release of salt-bootstrap, but is a bug in the bootstrap release that ships with this version of Salt. Please see the salt-bootstrap repo for more information on how to update your bootstrap version.

Changes for v2016.3.2..2016.3.3

Extended changelog courtesy of Todd Stansell (https://github.com/tjstansell/salt-changelogs):

Total Merges: **134**

Changes:

- **PR** #35580: (*twangboy*) Fix mac_service attempts to parse non-plist files
- **PR** #35586: (*hu-dabao*) Fix 35420, add run_on_start in build_schedule_item
- **PR** #35583: (*terminalmage*) Fix localemod tests
- **PR** #35579: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #35577: (*terminalmage*) Unit file changes for 2015.8.12, 2016.3.3
- **PR** #35571: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #35566: (*rallytime*) Back-port #35545 to 2015.8
- **PR** #35546: (*whiteinge*) Salt api eauth fail gracefully
- **PR** #35545: (*hu-dabao*) fix-35384, fix cmd.run unless
- **PR** #35540: (*rallytime*) Whitespace fix for 2015.8
- **PR** #35525: (*UtahDave*) add missing glob import
- **PR** #35510: (*terminalmage*) Better systemd integration
- **PR** #35492: (*terminalmage*) Clarify config.get docstring
- **PR** #35483: (*gtmanfred*) use __utils__ in salt.cloud
- **PR** #35573: (*rallytime*) Back-port #33337 to 2016.3
- **PR** #33337: (*mzupan*) adding the () to make changes work
- **PR** #35572: (*terminalmage*) Fix poor formatting in pkg state docs
- **PR** #35545: (*hu-dabao*) fix-35384, fix cmd.run unless
- **PR** #35489: (*rallytime*) Back-port #35463 to 2016.3
- **PR** #35463: (*skizunov*) Make *auth_timeout* user configurable again
- **PR** #35538: (*thatch45*) Treat python XML as an optdep
- **PR** #35526: (*thatch45*) Always deploy the thin to /var/tmp
- **PR** #35522: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #35513: (*cachedout*) Might be a good idea to be able to download the software we make
- **PR** #35512: (*cachedout*) Fixup 35419
- **PR** #35508: (*terminalmage*) Add Carbon to versionadded for git.diff
- **PR** #35497: (*deepakhj*) Fixes spacing in requirements files
- **PR** #35302: (*Ch3LL*) Add job cache test
- **PR** #35516: (*rallytime*) Back-port #34441 to 2016.3
- **PR** #34441: (*markuskramerIgitt*) Copy and delete silently, do not list each file
- **PR** #35517: (*rallytime*) Back-port #34502 to 2016.3
- **PR** #34502: (*markuskramerIgitt*) Windows installer build scripts will exit on error
- **PR** #35429: (*tankywoo*) Fix iptables target options with no arguments

- **PR** #35495: (*rallytime*) Use correct deprecated notation instead of a warning for apache_module.enable state function.
- **PR** #35498: (*rallytime*) Add supported templates list to all template doc references in file state
- **PR** #35406: (*rallytime*) Provide links to the renderers in the template docs
- **PR** #35360: (*rallytime*) Add all template registery templates to file.managed docs
- **PR** #35487: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #35486: (*rallytime*) Update bootstrap script to latest stable (2016.08.16)
- **PR** #35476: (*cachedout*) Fixup SSH bug where sudo without sudo user would break
- **PR** #35471: (*terminalmage*) win_pkg: Fix traceback when package is not installed
- **PR** #35460: (*rallytime*) [2015.8] Update bootstrap script to latest stable (2016.08.15)
- **PR** #35459: (*thatch45*) Ensure that output for salt-ssh gets back
- **PR** #35453: (*theothergraham*) fixes #34279 - disk cache ttl expiry
- **PR** #35451: (*isbm*) Bugfix: zypper mod repo unchanged
- **PR** #35448: (*isbm*) Add ignore_repo_failure option to suppress zypper's exit code 106 on ...
- **PR** #35413: (*cachedout*) Resolve path issues with cp.push
- **PR** #35446: (*cachedout*) Make salt-client aware of edge-case where saltutil might be broken
- **PR** #35449: (*dkruger*) aptpkg will specify --install-recommends if enabled by the SLS
- **PR** #35467: (*rallytime*) Back-port #33518 to 2016.3
- **PR** #35235: (*rallytime*) Back-port #33518 to 2016.3
- **PR** #33518: (*tonybaloney*) Fix libcloud bug #33367
- **PR** #35461: (*rallytime*) [2016.3] Update bootstrap script to latest stable (2016.08.15)
- **PR** #35456: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #35442: (*cachedout*) Fix cp.push_dir pushing empty dirs
- **PR** #35436: (*cachedout*) Minor doc fixup
- **PR** #35132: (*sjorge*) fixes , causing lots of mayham (onchange) with 2016.3.2 for me
- **PR** #35447: (*ticosax*) [dockerng] RepoTags can be also be None with docker 1.12
- **PR** #35308: (*farcaller*) Actually fixed dockerng.list_tags
- **PR** #34702: (*farcaller*) Fixed dockerng.list_tags
- **PR** #35427: (*cachedout*) Correct errant call to argspec from master. Fix ext_job_cache.
- **PR** #35428: (*cachedout*) Resolve stacktrace logged by highstate outputter if sls cannot be found
- **PR** #35412: (*s0undt3ch*) Only allow one sync read to happen at a time.
- **PR** #35406: (*rallytime*) Provide links to the renderers in the template docs
- **PR** #35360: (*rallytime*) Add all template registery templates to file.managed docs
- **PR** #35393: (*deniszh*) No need to run ddns update every time
- **PR** #35407: (*hu-dabao*) [Fix-35094] None will not be added to grains which generate [none]
- **PR** #35411: (*eliasp*) modules.event.send(): Prevent backtrace for masterless Minions

- **PR** #35395: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #35394: (*rallytime*) Back-port #34573 to 2015.8
- **PR** #35359: (*terminalmage*) Clean up open filehandles
- **PR** #35357: (*twangboy*) Fix file.recurse with clean: True on Windows (2015.8)
- **PR** #35339: (*isbm*) Bugfix: Prevent continuous restart, if a dependency wasn't installed
- **PR** #34573: (*cedwards*) Update freebsd.rst
- **PR** #35373: (*cachedout*) Raise SaltRenderError on bad requisite
- **PR** #35352: (*twangboy*) Fix file.recurse with clean: True on Windows (2016.3)
- **PR** #35356: (*jfindlay*) document log levels and warn on all logging below info
- **PR** #35358: (*twangboy*) Update libsodium deps
- **PR** #35360: (*rallytime*) Add all template registery templates to file.managed docs
- **PR** #35362: (*rallytime*) Correct deprecation version tags
- **PR** #35361: (*rallytime*) Blockdev deprecations
- **PR** #25267: (*jfindlay*) Disk module improvements
- **PR** #24893: (*The-Loeki*) Contribution: Disk module improvements
- **PR** #35347: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #35325: (*kev009*) Fix freebsd netstat route on fbsd 10+
- **PR** #35323: (*thatch45*) Fix issue with bad error check in salt-vt
- **PR** #35309: (*terminalmage*) file.recurse: Do not convert octal mode string to int
- **PR** #35301: (*bobrik*) Pass port to ssh.check_known_host, closes #35264
- **PR** #35334: (*cachedout*) Restore random_master functionality
- **PR** #35331: (*hu-dabao*) fix 35165, salt-run jobs.exit_success jid is broken
- **PR** #35318: (*rallytime*) Remove legacy compat docs in mysql pillar since the code was removed already
- **PR** #30913: (*jtand*) Deprecated code removed.
- **PR** #35329: (*hu-dabao*) sys.doc will skip all not connected minions
- **PR** #35306: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #35290: (*terminalmage*) Resolve a couple bugs in orchestration output
- **PR** #35229: (*lubyou*) Ignore import error for pwd module in mac_shadow
- **PR** #35227: (*isbm*) Isbm osfinger ubuntu fix
- **PR** #35286: (*hu-dabao*) fix 34425, a bug that sys.doc cannot output format
- **PR** #35275: (*rallytime*) Back-port #35213 to 2016.3
- **PR** #35213: (*gtmanfred*) add identity v3 support to openstack driver
- **PR** #35278: (*dmurphy18*) Increase timeout for siging to 10 seconds when signing rpm packages
- **PR** #35276: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #35271: (*bobrik*) Default state_output_profile to True everywhere, closes #35166
- **PR** #35249: (*terminalmage*) Fix regression in git.latest

- **PR** #35245: (*rallytime*) Back-port #35039 to 2015.8
- **PR** #35241: (*terminalmage*) Ensure max recursion in gitfs results in no blob object being returned.
- **PR** #35240: (*derekmaciel*) Backport #35225 to 2015.8
- **PR** #35236: (*rallytime*) Back-port #35119 to 2015.8
- **PR** #35233: (*terminalmage*) Do not attempt to get fqdn_ip{4,6} grains when ipv{4,6} grains are empty
- **PR** #35225: (*derekmaciel*) Add missing documentation for pkg.installed
- **PR** #35211: (*cachedout*) Alternative sudo users for salt-ssh
- **PR** #35202: (*multani*) doc: fix broken links in the test documentation page
- **PR** #35119: (*derekmaciel*) Assume two EVRs are equal if E and V are equal but one R is missing.
- **PR** #35039: (*whiteinge*) Add saltenv support to module.run
- **PR** #35274: (*rallytime*) Lint fixes for 2016.3 branch
- **PR** #35232: (*theredcat*) fix rabbitmq version detection using a package-agnostic version
- **PR** #35269: (*meaksh*) Checksum validation for zypper pkg.download in 2016.3 and develop
- **PR** #35197: (*vutny*) Make *pkgbuild.repo* state recognize *createrepo* command return code
- **PR** #35178: (*cro*) Add append_minionid_config_dirs option
- **PR** #35259: (*cachedout*) Fixup 35253
- **PR** #35253: (*abednarik*) Fix disk.wipe missing option.
- **PR** #35253: (*abednarik*) Fix disk.wipe missing option.
- **PR** #35206: (*hu-dabao*) Make the log level back to warning for unclassified exc
- **PR** #35196: (*isbm*) Deprecate status.uptime one version later
- **PR** #35207: (*eliasp*) Handle exceptions in *_get_virtual()* and in *_get_virtual()* consumers
- **PR** #35232: (*theredcat*) fix rabbitmq version detection using a package-agnostic version
- **PR** #35244: (*rallytime*) Back-port #31677 to 2016.3
- **PR** #31677: (*miihael*) Return correct value for services that must be enabled in Systemd
- **PR** #35182: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #35174: (*rallytime*) Back-port #35146 to 2015.8
- **PR** #35173: (*rallytime*) Back-port #35135 to 2015.8
- **PR** #35146: (*cachedout*) Don't discard running beacons config when listing becaons
- **PR** #35145: (*jacobhammons*) doc version update to 2015.8.11, updates to release notes
- **PR** #35135: (*rallytime*) Add missing CLI Examples to aws_sqs module funcs
- **PR** #34827: (*thatch45*) fix beacon list to include all beacons being processed
- **PR** #35150: (*rallytime*) Start release notes for 2016.3.3
- **PR** #35157: (*hu-dabao*) master returned from func should be a string as designed so far
- **PR** #35147: (*jacobhammons*) doc version updated to 2016.3.2
- **PR** #35136: (*s0undt3ch*) Don't restart processes if the manager is not set to restart them
- **PR** #35133: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3

- **PR** #35114: (*terminalmage*) Add clarification docs on a common git_pillar misconfiguration
- **PR** #35043: (*rallytime*) Start release notes file for 2015.8.12
- **PR** #34768: (*hrumph*) Fixes #34767
- **PR** #35120: (*kstreee*) The `_handle_event_socket_recv' function in Salt Api is missing first data of stream.
- **PR** #35131: (*rallytime*) Back-port #35011 to 2016.3
- **PR** #35011: (*nishigori*) Fix docstring for code-block of rst
- **PR** #35110: (*hu-dabao*) Do not return job status back to master for master_alive and master_failback schedules
- **PR** #35104: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #35066: (*jfindlay*) returners.postgres_local_cache: do not log in __virtual__
- **PR** #35050: (*terminalmage*) [orchestration] Properly handle runner/wheel funcs which accept a `saltdev' argument
- **PR** #35026: (*cachedout*) Expressly deny a minion if a key cannot be found
- **PR** #35024: (*bobrik*) Cache systemd unit update check per unit, closes #34927
- **PR** #35105: (*rallytime*) Update 2016.3.0 release notes with repo.saltstack.com Xenial pkg availability
- **PR** #33870: (*rallytime*) Add note about Xenial packages to 2016.3.0 release notes
- **PR** #35059: (*vutny*) Add *fun_args* field to events generated by execution of Master modules
- **PR** #34955: (*lubyou*) force dism to always output english text
- **PR** #35078: (*jacobweinstock*) added missing non-keyword argument skip_verify to __get_artifact func...
- **PR** #35008: (*hu-dabao*) Fix multimaster failover on more than two masters and failback behaviour
- **PR** #35055: (*galet*) #33536 pkgrepo.managed does not disable a yum repo with ``disabled: True''
- **PR** #35039: (*whiteinge*) Add saltenv support to module.run
- **PR** #35046: (*eliasp*) Prevent backtrace in *salt.states.network*
- **PR** #35054: (*lubyou*) Only fail user lookup is the user parameter is required
- **PR** #35029: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #35000: (*rallytime*) Back-port #33875 and #34999 to 2015.8
- **PR** #34994: (*rallytime*) Back-port #34835 to 2015.8
- **PR** #34835: (*thatch45*) Make the mine and publish combine minion and master opts in salt-ssh
- **PR** #33875: (*jmesquita*) Fix naive fileserver map diff algorithm
- **PR** #35021: (*terminalmage*) Don't add `.' to strerror when passed string ends in ? or !
- **PR** #34983: (*eliasp*) modules.slack.post_message: Allow sending messages to direct-message ...
- **PR** #34996: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #34991: (*cachedout*) SSH timeout
- **PR** #34976: (*cachedout*) Refine errors in client
- **PR** #34831: (*thatch45*) If the thin does not match, then redeploy, don't error
- **PR** #34987: (*eliasp*) salt.states.slack: check correct result attribute
- **PR** #34835: (*thatch45*) Make the mine and publish combine minion and master opts in salt-ssh

- **PR** #34988: (*rallytime*) Update release notes with new changes
- **PR** #34946: (*anlutro*) Fix virtualenv behavior when requirements files are in subdirectories
- **PR** #34957: (*sjmh*) Don't fall through to checking auth entries
- **PR** #34971: (*cachedout*) Increase timeout for grains test
- **PR** #34951: (*vutny*) Fix #34873
- **PR** #34935: (*rallytime*) Avoid UnboundLocalError in beacons module
- **PR** #34894: (*rallytime*) [develop] Merge forward from 2016.3 to develop
- **PR** #34956: (*cachedout*) Increase all run_script timeouts to 30s
- **PR** #34933: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #34916: (*cachedout*) Master performance improvement
- **PR** #34911: (*cachedout*) Backport #34906
- **PR** #34906: (*cachedout*) Set timeout for run_salt in test suite
- **PR** #34898: (*hrumph*) Stop multiple refreshes during call to pkg.list_upgrades
- **PR** #34606: (*isbm*) Bugfix: Exit on configuration read (backport)
- **PR** #34915: (*abednarik*) Update service_rh provider to exclude XenServer >= 7.
- **PR** #34926: (*rallytime*) Lint #34923
- **PR** #34923: (*eliasp*) Handle exception when no Slack API key was provided
- **PR** #34910: (*cachedout*) Fix grains error on proxy minions
- **PR** #34864: (*jmacfar*) Check for version in list of installed versions
- **PR** #34902: (*rallytime*) Back-port #34878 to 2016.3
- **PR** #34878: (*abednarik*) Add VirtuozzoLinux is yumpkg enable list.
- **PR** #34901: (*rallytime*) Add VirtuozzoLinux to the list of enabled distros for rpm.py
- **PR** #34900: (*rallytime*) Add VirtuozzoLinux to enabled platforms list in rh_service.py
- **PR** #34887: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #34869: (*terminalmage*) Fail git.latest states with uncommitted changes when force_reset=False
- **PR** #34862: (*thatch45*) Fix salt-ssh cacheing issue
- **PR** #34859: (*cachedout*) Fix wheel test
- **PR** #34632: (*eliasp*) Try to create the log directory when not present yet
- **PR** #34854: (*rallytime*) Remove string_types import from state compiler
- **PR** #34865: (*thatch45*) This needs discussion, since this breaks SUSE
- **PR** #34858: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #34847: (*cachedout*) Add an option to skip the verification of client_acl users
- **PR** #34833: (*rallytime*) Back-port #28521 to 2015.8
- **PR** #34828: (*thatch45*) Fix #34648
- **PR** #34827: (*thatch45*) fix beacon list to include all beacons being processed
- **PR** #34823: (*rallytime*) Back-port #25276 to 2015.8

- **PR** #34822: (*thatch45*) Fix salt-ssh state.high and state.low
- **PR** #28521: (*gongled*) SPM: packaging doesn't work in Python 2.6. Fixed.
- **PR** #25276: (*jacobhammons*) copy spm.1 man page during setup
- **PR** #34852: (*rallytime*) Skip GCE unit tests - causes test suite to hang

20.2.15 Salt 2016.3.4 Release Notes

Version 2016.3.4 is a bugfix release for *2016.3.0*.

Known Issues

The Salt Minion does not clean up files in `/tmp` when rendering templates. This potentially results in either running out of disk space or running out of inodes. Please see Issue #37541 for more information. This bug was fixed with Pull Request #37540, which will be available in the `2016.3.5` release of Salt.

The release of the *bootstrap-salt.sh* script that is included with 2016.3.4 release has a bug in it that fails to install salt correctly for git installs using tags in the 2015.5 branch. This bug has not been fixed in the salt-bootstrap repository yet, but the previous bootstrap release (v2016.08.16) does not contain this bug.

Changes

- The *disk.wipe* execution module function has been modified so that it correctly wipes a disk.
- Add ability to clone from a snapshot to the VMWare salt-cloud driver.
- Add ability to specify disk backing mode in the VMWare salt cloud profile.

Changes for v2016.3.3..v2016.3.4

Changes:

- **PR** #37282: (*thatch45*) add cpub to raet event for compat
- **PR** #37278: (*jfindlay*) update 2016.3.4 release notes
- **PR** #37252: (*vutny*) Set logging level to `info' for message about init system detection
- 47290d8 Update man pages for the 2016.3 branch (#37259)
- **PR** #37257: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #37254: (*DmitryKuzmenko*) Bugs/37191 minion hangs
- **PR** #37218: (*darkalia*) Issue #37187 Do not parse first /proc/1/cmdline binary if it's not *b…
- **PR** #37239: (*Ch3LL*) Fix cloud tests timeout
- **PR** #37244: (*rallytime*) Update bootstrap release to 2016.10.25
- **PR** #37245: (*rallytime*) Back-port #36334 to 2016.3
- **PR** #37233: (*rallytime*) Back-port #37154 to 2016.3

- **PR** #37232: (*rallytime*) Back-port #37153 to 2016.3
- **PR** #37228: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #37213: (*cachedout*) More salttesting fixes
- **PR** #37207: (*cachedout*) Correct documentation for mine_functions
- **PR** #37208: (*cachedout*) Give multimion a process manager and its own destroy method
- **PR** #37206: (*cachedout*) Address transport test hang
- **PR** #37179: (*isbm*) Fix Salt-API ssh crash (2016.3)
- **PR** #37183: (*gtmanfred*) load tags should reference the actual load tags
- **PR** #37188: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- d7e28d2 Pylint fix for 2016.3 (#37186)
- **PR** #37175: (*cachedout*) Fix test hang
- **PR** #37144: (*DmitryKuzmenko*) Bugs/36866 salt minion communication broken 2016.3
- **PR** #37158: (*jfindlay*) add mock for *status.uptime* unit test
- **PR** #37161: (*rallytime*) Back-port #37098 to 2016.3
- **PR** #37159: (*rallytime*) Back-port #37107 to 2016.3
- **PR** #37163: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- 2bc5ded Allow the minion test daemons a couple of tries to connect to the master (#37150)
- ec7ad9e Add note about salt-bootstrap known issue for 2016.3.4 (#37152)
- **PR** #37135: (*AaronM-Cloudtek*) Fix example signing policy in salt.states.x509 docs
- **PR** #37140: (*vutny*) pkgbuild.repo: fix GPG signing with *use_passphrase=False*
- **PR** #37071: (*vutny*) pkgbuild.repo: add *timeout* parameter for waiting passphrase prompt
- **PR** #37115: (*DmitryKuzmenko*) Backport/36720 fix race condition
- **PR** #37119: (*jfindlay*) log.setup: only assign user if defined
- f22c686 fix digital ocean image name in profile (#37126)
- 4263849 add 2016.3.4 release notes (#37125)
- **PR** #37120: (*rallytime*) Back-port #36246 to 2016.3
- **PR** #37103: (*cachedout*) Remove unnecessary sleep from unit.utils.process_test.TestProcessMana…
- **PR** #36823: (*terminalmage*) Update debian systemd unit files to use default KillMode, Type=notify
- **PR** #37030: (*isbm*) Fix status.uptime for Solaris 9, 10 and 11.
- **PR** #37101: (*rallytime*) [2016.3] Merge forward from 2016.3 to carbon
- **PR** #36958: (*twangboy*) Fix bug where cmd.powershell fails to return
- **PR** #37086: (*cachedout*) Make salt-call a first-class citizen for multi-master
- **PR** #36898: (*clinta*) X509 fixes
- **PR** #37025: (*cro*) Make salt.utils.minion._check_cmdline work on OSes without /proc.
- **PR** #37050: (*twangboy*) Fix service state for Windows (DO NOT MERGE FORWARD)
- **PR** #37076: (*jfindlay*) Document proxy settings

- **PR** #37081: (*terminalmage*) Fix archive.extracted remote source_hash verification
- **PR** #37064: (*cachedout*) Unify job check in scheduler
- **PR** #37072: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #37049: (*terminalmage*) Further clarification on new grains docs from #37028
- **PR** #37057: (*rallytime*) [2016.3] Update salt.utils.cloud references to __utils__ for cache funcs
- **PR** #36977: (*twangboy*) Remove whitespace from string commands
- **PR** #37048: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #37028: (*damon-atkins*) Update topics/grains doco, about considerations before adding a Grain
- **PR** #37012: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- 519e1dc opkg: Support ignore_epoch argument in version comparisons (#37007)
- **PR** #36808: (*gtmanfred*) allow for closing stuff in beacons
- a02868b Make helper funcs private (#36993)
- **PR** #36986: (*jfindlay*) modules.archive.unzip: zipfile is stdlib
- **PR** #36981: (*rallytime*) Skip pkg.upgrades test on distros other that Suse in 2016.3
- **PR** #36755: (*terminalmage*) systemd.py: check retcode for service availability in systemd >= 231
- **PR** #36750: (*terminalmage*) Add the CLI client and pub_data as class attributes
- **PR** #36241: (*hrumph*) Fixes #36240
- **PR** #36950: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #36948: (*rallytime*) Back-port #36943 to 2016.3
- **PR** #36946: (*rallytime*) Back-port #36892 to 2016.3
- **PR** #36945: (*rallytime*) Back-port #35199 to 2016.3
- 7565ed6 Fix versionadded (#36949)
- 4d8fb03 return opennebula errors to user (#36930)
- **PR** #36929: (*rallytime*) [yumpkg] Skip test_pkg_upgrade_has_pending_upgrades if there are no upgrades
- 288f437 [2016.3] Remove ``Targeting with Executions'' section from docs (#36926)
- **PR** #36915: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- 0ebf7a4 modules: debian_ip: override params early to fix diff (#36820)
- a23ce84 states.schedule: splay is not ordereddict (#36894)
- **PR** #36885: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- 1c0ba80 salt-ssh: Try ``command -v'' before falling back to ``which'' (#36889)
- 85eea4d fileclient: Change queryarg comparison from None to simple boolean check (#36830)
- **PR** #36853: (*rallytime*) Back-port #33939 to 2016.3
- **PR** #36852: (*rallytime*) Back-port #36743 to 2016.3
- **PR** #36844: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #36835: (*jfindlay*) unify and expand beacon documentation
- **PR** #36789: (*maximeguillet*) Fix behavior of psql -c option with postgresql 9.6

- **PR** #36797: (*cachedout*) Error on reaction with missing SLS file
- **PR** #36803: (*gtmanfred*) do not load libvirt pillar if certtool is unavailable
- **PR** #36815: (*BenoitKnecht*) Fix glance.image_present state
- **PR** #36754: (*terminalmage*) Base rpmdev-vercmp comparison result on retcode
- **PR** #36785: (*cachedout*) Fixup merge forward #36728
- **PR** #36768: (*gtmanfred*) add __utils__ to vultr cloud provider
- **PR** #36764: (*cachedout*) Another bit of detection for failed pip tests
- **PR** #36747: (*jfindlay*) modules.archive integration tests: check for gzip, rar
- **PR** #36744: (*cachedout*) Fix issue where test suite could hang on shutdown
- **PR** #36696: (*cro*) pass __proxy__ in state.sls_id
- **PR** #36716: (*vutny*) salt.modules.ini_manage: fix creating options in empty file
- **PR** #36724: (*rallytime*) Back-port #36628 to 2016.3
- **PR** #36725: (*rallytime*) Back-port #36643 to 2016.3
- **PR** #36726: (*rallytime*) Back-port #36722 to 2016.3
- 48d2b01 fix python26 archive zip module (#36719)
- **PR** #36699: (*cachedout*) Fix error in test
- **PR** #36670: (*jackywu*) fix bug for including loopback addr
- **PR** #36694: (*lorengordon*) Exposes *ignore_if_missing* to file.replace state module
- **PR** #36686: (*jfindlay*) log levels doc: try long form table
- **PR** #36690: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #36680: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #36659: (*terminalmage*) Support dynamic env in new-style git_pillar
- **PR** #36538: (*clinta*) daemon-reload on call to service.avaliable
- **PR** #36616: (*cro*) Zypper fix test
- **PR** #36621: (*terminalmage*) Fix shadowed builtins
- **PR** #36636: (*rallytime*) Back-port #36618 to 2016.3
- **PR** #36648: (*jfindlay*) Integration tests for archive execution module
- **PR** #36650: (*rallytime*) Revert ``Pr 36386''
- **PR** #36646: (*rallytime*) Provide an error message when invalid transport is set
- **PR** #36635: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #36620: (*rallytime*) Don't allow mercurial states to return True with errors
- **PR** #36622: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #36520: (*twangboy*) Fix cmd.script runas for Windows
- **PR** #36564: (*DmitryKuzmenko*) Improve and fix *_check_cache_minions*
- **PR** #36606: (*danlsgiga*) Add support for ACL Tokens in consul_pillar with the option consul.token
- **PR** #36613: (*slinn0*) Remove file.check_managed_changes when not needed (backport of PR #36589 to 2016.3)

- **PR** #36609: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #36595: (*cachedout*) Remove tests which no longer apply
- **PR** #36594: (*cachedout*) Update boostrap docs to recent versions of Ubuntu
- **PR** #36585: (*twangboy*) Add pyOpenSSL to req file for Windows
- f205d5f Fix salt.utils.rm_rf to delete files too (#36572)
- **PR** #36495: (*cro*) Fix pkg.upgrade for zypper
- **PR** #36539: (*jfindlay*) Prefer archive.cmd_unzip
- **PR** #36546: (*rallytime*) Mercurial Module: Pass the identity_path portion as own arg
- **PR** #36555: (*DmitryKuzmenko*) Bugs/35480 master shutdown
- **PR** #36542: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3

- **PR** #36235: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #36137: (*cachedout*) Allow highstate outputter to show all results
- 1b12940 Docs clarification for module sync and state.apply (#36217)
- **PR** #36184: (*DmitryKuzmenko*) Disable signal handling while handling signal
- **PR** #36203: (*xiaoanyunfei*) fix owner of MultiprocessingLoggingQueue
- b586ed7 if the backend stack traces when it should return an empty string (#36193)
- **PR** #36188: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #35907: (*rallytime*) Catch CommandExecutionError when the group in group_installed doesn't exist
- **PR** #36068: (*rallytime*) Remove grains type deprecation warning from 2016.3
- **PR** #36152: (*cachedout*) Remove unnecessary unpack
- **PR** #36158: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- 3445a33 Remove unclosed backticks in walkthrough doc (#36170)

- **PR** #36161: (*jacobhammons*) Adds #36055 to release notes
- **PR** #36139: (*meaksh*) Fixing unit tests for 2016.3
- **PR** #36143: (*multani*) doc: fix doc formatting for salt.states.mount
- **PR** #36070: (*rallytime*) Use __utils__ instead of salt.utils.cloud in opennebula driver
- **PR** #36089: (*terminalmage*) Support running git states / remote exec funcs as a different user in Windows
- **PR** #35923: (*kstreee*) Fixes a bug that Ctrl-c not working on Salt CLI.
- **PR** #36078: (*thatch45*) Failhard test=True fix
- **PR** #34529: (*Ch3LL*) Add skip_verify for archive.extracted
- **PR** #36073: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- a86e36c Add docs for new kwargs added to the wheel key module (#36040)
- 2934fc1 Doc cherrypy deemphasize urlencoded (#36047)
- **PR** #36039: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- 1d90c42 Back-port #35824 to 2016.3 (#36038)
- 65b6734 catch unicode encoding errors in json outputter (#36033)
- 822481e modules.service: Do not default to OpenRC on Gentoo, also allow systemd (#36010)
- b68d293 fix redis_return's clean_old_jobs. (#36014)
- 95591c2 Add documentation about salt_interface to EC2 docs (#36015)
- **PR** #36019: (*meaksh*) Back-port #36000 to 2016.3
- b9fc51a Fix error when profiling is turned on and minions don't return (#36028)
- 20a361d Add include_* kwargs to the *_dict key functions (#36030)
- **PR** #36024: (*DmitryKuzmenko*) Don't subscribe to events if not sure it would read them.
- **PR** #36023: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #36004: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #35952: (*twangboy*) Load UserProfile when using RunAs (2016.3)
- **PR** #35959: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #35955: (*jacobhammons*) Version docs to 2016.3.3
- 9910b9c Fix incremental doc builds - OS X, postgres returner, tcp transport doc updates (#35865)
- 24f9d33 Speed up FreeBSD pkg install process for pkg.latest since pkg command by default tries to update repository DB on each search: (#35904)
- b87e4f1 Salt Cloud: add *centos* default user for official CentOS AMIs (#35931)
- 580e0d4 Mention that docker image names must be given with repository (#35926)
- **PR** #35868: (*rallytime*) Add more helpful return messages for drac runner
- **PR** #35903: (*rallytime*) [2016.3] Merge forward from 2015.8 into 2016.3
- **PR** #35855: (*vutny*) [REGRESSION] salt-cloud: fix path to Salt Master socket dir
- **PR** #35881: (*whiteinge*) Add fail-safe in case Salt gives us data we can't serialize
- 9679266 Add engines to list of extension module options in master config docs (#35864)

- 40bcb7d Fix IAM roles statement to be boto version specific in sqs_events (#35861)
- ee45a88 Fix doc formatting for sqs_events engine example config (#35860)
- **PR** #35859: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #35849: (*theredcat*) Fix potential infinite loop with no error when using recursive makedirs
- **PR** #35682: (*vutny*) [BACKPORT] Fix empty *fun_agrs* field in Reactor generated events
- **PR** #35792: (*DmitryKuzmenko*) Reconnect syndic to event bus if master disappeared.
- **PR** #35817: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- b89f455 fix 34241, webutil.useradd_all is deprecated (#35788)
- 2be5daf Bump the deprecation warning in pkgrepo state to Nitrogen (#35810)
- 083d836 Fix misuse of HTTP credentials in modjk execution module (#35796)
- 0247867 Adds mock for tornado.locks (#35807)
- e4dfc21 Trivial documentation spelling fix (#35800)
- **PR** #35763: (*isbm*) Sphinx crash: documentation config fix
- cd90052 Documentation spelling fixes (#35773)
- **PR** #35767: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #35753: (*rallytime*) Fixup the unit.client_test.LocalClientTestCase.test_cmd_subset from #35720
- dab8428 Add versionadded for enabled function in apache_module state (#35732)
- **PR** #35737: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #35729: (*cachedout*) Remove docs mocks for msgpack and psutils
- **PR** #35628: (*jf*) Fix user.present state reporting for groups when remove_groups=false
- **PR** #35696: (*xiaoanyunfei*) fix maximum recursion depth bug
- **PR** #35720: (*hu-dabao*) fix 20575, make subset really return random subset
- **PR** #35700: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- **PR** #35634: (*hu-dabao*) fix 34922, StopIteration should not throw exception out
- **PR** #35679: (*twangboy*) Revert to vcredist 12 (2013)
- **PR** #35662: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3
- 64974c8 Backport #35627 to 2016.3 (#35661)
- **PR** #35615: (*hu-dabao*) fix 35591, verify the acl file exist before proceed
- **PR** #35485: (*cro*) Cassandra returner bugfixes and documentation.
- **PR** #35520: (*morganwillcock*) Check for all success return codes in win_dism state
- **PR** #35616: (*xbglowx*) Remove duplicate auth_tries in minion docs
- **PR** #35552: (*DmitryKuzmenko*) Syndic fix: don't strip `retcode' and `success' from events.
- **PR** #35559: (*Jlin317*) Fix highstate outputter when it's given multiple results
- **PR** #35605: (*rallytime*) Back-port #32739 to 2016.3
- **PR** #35606: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3

20.2.16 Salt 2016.3.5 Release Notes

Version 2016.3.5 is a bugfix release for *2016.3.0*.

Security Fixes

CVE-2017-5192: local_batch client external authentication not respected

The `LocalClient.cmd_batch()` method client does not accept `external_auth` credentials and so access to it from salt-api has been removed for now. This vulnerability allows code execution for already-authenticated users and is only in effect when running salt-api as the `root` user.

CVE-2017-5200: Salt-api allows arbitrary command execution on a salt-master via Salt's ssh_client

Users of Salt-API and salt-ssh could execute a command on the salt master via a hole when both systems were enabled.

We recommend everyone on the 2016.3 branch upgrade to a patched release as soon as possible.

Improved Checksum Handling in `file.managed`, `archive.extracted` States

When the `source_hash` argument for these states refers to a file containing checksums, Salt now looks for checksums matching the name of the source URI, as well as the file being managed. Prior releases only looked for checksums matching the filename being managed. Additionally, a new argument (`source_hash_name`) has been added, which allows the user to disambiguate ambiguous matches when more than one matching checksum is found in the `source_hash` file.

A more detailed explanation of this functionality can be found in the *`file.managed`* documentation, in the section for the new `source_hash_name` argument.

Changes for v2016.3.4..v2016.3.5

  - **PR** #38560: (*Ch3LL*) fix api logfile | refs: #38585
  - **PR** #38527: (*rbjorklin*) salt-api no longer forces the default timeout | refs: #38585 #38585 #38585
  - bab3479 Merge pull request #38585 from rallytime/follow-up-38527

  - 0558720 Pylint fix: add line at end of file
  - fa01367 Keep a copy of the DEFAULT_API_OPTS and restore them after the test run
  - 2ad0763 Test clean up
  - fd2ee7d Add some simple unit tests for salt.config.api_config function
  - 3d2fefc Make sure the pidfile and log_file values are overridden by api opts
  - 1f6b540 Make sure the pidfile and log_file values are overridden by api opts
  - 04d307f salt-api no longer forces the default timeout
- **PR** #38707: (*alexbleotu*) Fixed prepending of root_dir override to the other paths | refs: #38796 @ *2017-01-17T15:40:13Z*
  - 0fb6bb7 Merge pull request #38707 from alexbleotu/root_dir_fix-gh
  - 0bac8c8 Fixed prepending of root_dir override to the other paths
- **PR** #38774: (*vutny*) DOCS: add C++ compiler installation on RHEL required for bundled 0mq @ *2017-01-17T15:21:00Z*
  - 96c9dc1 Merge pull request #38774 from vutny/dev-test-docs
  - 4620dc4 DOCS: add C++ compiler installation on RHEL required for bundled 0mq
- **PR** #38749: (*vutny*) pkg build modules throw better exception message if keyid wasn't found @ *2017-01-17T02:13:08Z*
  - aedfbb7 Merge pull request #38749 from vutny/pkg-build-better-exception-msg
  - 53f2be5 pkg build modules throw better exception message if keyid wasn't found
- **PR** #38743: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3 @ *2017-01-17T01:46:01Z*
  - **ISSUE** #20: (*thatch45*) Sort sys.doc output
  - **ISSUE** #19: (*thatch45*) Sending a faulty command kills all the minions!
  - **PR** #38731: (*rallytime*) Various follow up fixes
  - **PR** #38602: (*terminalmage*) Fix failing unit.states.boto_vpc_test.BotoVpcRouteTableTestCase.test_present_with_routes
  - 8466b34 Merge pull request #38743 from rallytime/merge-2016.3
  - d24776f Merge branch `2015.8' into `2016.3'
  - 6869621 Merge pull request #38731 from rallytime/merge-2015.8
    * 9eb191b Pylint fix
    * b910499 Various follow up fixes
    * e8309a6 Add release notes for 2015.8.13
    * f881f36 Merge pull request #20 from rallytime/2015.8.12_follow_up-batch-tests
      · 3428232 Clean up tests and docs for batch execution
    * c80b20b Merge pull request #19 from whiteinge/batchclient
      · 3d8f3d1 Remove batch execution from NetapiClient and Saltnado
    * 97b0f64 Lintfix
    * d151666 Add explanation comment
    * 62f2c87 Add docstring

        * 9b0a786 Explain what it is about and how to configure that
        * 5ea3579 Pick up a specified roster file from the configured locations
        * 3a8614c Disable custom rosters in API
        * c0e5a11 Add roster disable flag
    - e9c59e9 Merge pull request #38602 from terminalmage/fix-boto-test
        * 3424a10 Fix failing unit.states.boto_vpc_test.BotoVpcRouteTableTestCase.test_present_with_routes
- **PR** #38723: (*rallytime*) Remove ``event_publisher_pub_hwm'' and ``salt_event_pub_hwm'' from config/__init__.py @ *2017-01-15T18:36:14Z*
    - **ISSUE** #38674: (*jackywu*) There is no code to use parameter `event_publisher_pub_hwm' in saltstack-2016.3 | refs: #38723
    - **PR** #29294: (*skizunov*) ZeroMQ no longer required when transport is TCP | refs: #38723 #38723
    - a642cde Merge pull request #38723 from rallytime/fix-38674
    - 706c885 Remove ``event_publisher_pub_hwm'' and ``salt_event_pub_hwm'' from config/__init__.py
- **PR** #38669: (*rallytime*) Update bootstrap script verstion to latest release @ *2017-01-15T18:03:27Z*
    - fc545af Merge pull request #38669 from rallytime/update-bootstrap-script
    - 78ba76e Update bootstrap script verstion to latest release
- **PR** #38693: (*twangboy*) Update jinja2 to 2.9.4 @ *2017-01-15T14:40:46Z*
    - 50d417f Merge pull request #38693 from twangboy/update_jinja
    - e0c7e55 Update jinja2 to 2.9.4
- **PR** #38739: (*vutny*) DOCS: correct examples of running test suite @ *2017-01-15T14:35:47Z*
    - f4233bb Merge pull request #38739 from vutny/fix-runtests-doc
    - b872bb6 DOCS: correct examples of running test suite
- 51d4707 DOCS: add links to File State Backups page where necessary (#38735)
    - **PR** #38735: (*vutny*) DOCS: add links to File State Backups page where necessary
- 6d3717b Proofread jinja_to_execution_module tutorial (#38720)
    - **PR** #38720: (*dereckson*) Proofread jinja_to_execution_module tutorial
- **PR** #38647: (*gtmanfred*) Allow novaclient to use keystoneauth1 sessions for authentication @ *2017-01-10T17:48:26Z*
    - **ISSUE** #36548: (*abonillasuse*) openstack auth with nova driver | refs: #38647
    - 7b850d4 Merge pull request #38647 from gtmanfred/nova
    - 5be9b60 add documentation about using keystoneauth for v3
    - 7b657ca add the ability to use keystone v2 and v3
    - 5646ae1 add ability to use keystoneauth to authenitcate in nova driver
- **PR** #38650: (*rallytime*) Remove the installation instructions for out-of-date community ppa @ *2017-01-10T17:47:45Z*
    - **ISSUE** #38648: (*ericuldall*) No release file error from PPA on Ubuntu | refs: #38650
    - **ISSUE** #38572: (*COLABORATI*) ppa:saltstack/salt failure | refs: #38650

  - **ISSUE** #34504: (*AvinashDeluxeVR*) Installation documentation for Ubuntu server and Windows minion leads the user to use different salt versions. | refs: #38650
  - 383768d Merge pull request #38650 from rallytime/remove-ubuntu-ppa-docs
  - 30429b2 Remove the installation instructions for out-of-date community ppa
- **PR** #38657: (*DmitryKuzmenko*) Publish the `data' field content for Syndic evets @ *2017-01-10T16:59:33Z*
  - **ISSUE** #38087: (*UtahDave*) The `data' field in the return from a minion below a syndic is wrapped in an extra `data' field. | refs: #38657
  - 7d9f56e Merge pull request #38657 from DSRCorporation/bugs/38087_syndic_event_format_fix
  - 594c33f Publish the `data' field content for Syndic evets
- **PR** #38649: (*Ch3LL*) fix unit.modules.file_test @ *2017-01-10T16:44:45Z*
  - 8398751 Merge pull request #38649 from Ch3LL/test_apply_template
  - 47f8b68 fix unit.modules.file_test
- **PR** #38626: (*cachedout*) Revert ``Fix/workaround for issue #37355'' @ *2017-01-06T21:28:09Z*
  - **ISSUE** #37355: (*Firewire2002*) salt-ssh - ImportError: No module named backports.ssl_match_hostname | refs: #37358
  - **ISSUE** #34600: (*davidpsv17*) Error trying a salt-ssh test.ping | refs: #37358
  - **ISSUE** #27355: (*jerob*) salt ssh error with debian 7 on target | refs: #37358
  - **PR** #37358: (*Firewire2002*) Fix/workaround for issue #37355 | refs: #38626
  - 74ddc71 Merge pull request #38626 from saltstack/revert-37358-2016.3.3_issue37355
  - e912ac9 Revert ``Fix/workaround for issue #37355``
- **PR** #37358: (*Firewire2002*) Fix/workaround for issue #37355 | refs: #38626 @ *2017-01-06T18:58:47Z*
  - **ISSUE** #37355: (*Firewire2002*) salt-ssh - ImportError: No module named backports.ssl_match_hostname | refs: #37358

  - **ISSUE** #27355: (*jerob*) salt ssh error with debian 7 on target | refs: #37358
  - 5e58b32 Merge pull request #37358 from Firewire2002/2016.3.3_issue37355
  - 910da18 fixed typo
  - 4fbc5dd fixed wrong renamed variable and spaces
  - 92366e6 issue #37355
  - 7dc87ab issue #37355
  - 2878180 issue #37355
- **PR** #35390: (*alexandr-orlov*) Returns back missed proper grains dictionary for file module @ *2017-01-06T18:02:13Z*
  - 6c2fe61 Merge pull request #35390 from alexandr-orlov/2016.3
  - cd5ae17 fxd missed proper grains dictionary
- **PR** #38618: (*rallytime*) Back-port #38579 to 2016.3 @ *2017-01-06T17:37:56Z*
  - **ISSUE** #38558: (*multani*) pillar.get("...", default=var, merge=true) updates default value | refs: #38579 #38579

  - **PR** #38579: (*zwo-bot*) Fix #38558 - pillar.get with default= ...,merge=true influence subsequent calls of pillar.get | refs: #38618
  - 2579cfa Merge pull request #38618 from rallytime/bp-38579
  - 2052ece Add copy import
  - 2c8845a add test for pillar.get() + default value
  - c2f98d2 ticket 38558: add unit test, deepcopy() only if necessary
  - 30ae0a1 added deepcopy of default if merge=True
- **PR** #38601: (*terminalmage*) pillar.get: Raise exception when merge=True and default is not a dict @ *2017-01-05T23:15:51Z*
  - da676ce Merge pull request #38601 from terminalmage/pillar-get
  - 8613d72 pillar.get: Raise exception when merge=True and default is not a dict
- **PR** #38600: (*terminalmage*) Avoid errors when sudo_user is set (2016.3 branch) @ *2017-01-05T20:57:09Z*
  - **PR** #38598: (*terminalmage*) Avoid errors when sudo_user is set | refs: #38600
  - 224fc77 Merge pull request #38600 from terminalmage/issue38459-2016.3
  - 8a45b13 Avoid errors when sudo_user is set
- **PR** #38589: (*tobithiel*) State Gem: fix incorrect warning about missing rvm/rbenv @ *2017-01-05T20:12:15Z*
  - a376970 Merge pull request #38589 from tobithiel/fix_rvm_rbenv_warning
  - 9ec470b State Gem: fix incorrect warning about missing rvm/rbenv
- **PR** #38567: (*pass-by-value*) Create queue if one doesn't exist @ *2017-01-05T18:46:11Z*
  - 02e6a78 Merge pull request #38567 from pass-by-value/pgjsonb_queue_changes_2016.3
  - 67879eb Create queue if one doesn't exist
- **PR** #38587: (*rallytime*) Change daemontools __virtualname__ from service to daemontools @ *2017-01-05T18:06:01Z*
  - **ISSUE** #37498: (*githubcdr*) service.restart salt-minion fails on Ubuntu 14.04.5 LTS | refs: #37748 #38587
  - 0889cbd Merge pull request #38587 from rallytime/fix-37498
  - 2a58809 Change daemontools __virtualname__ from service to daemontools
- **PR** #38562: (*rallytime*) Update arch installation docs with correct package name @ *2017-01-04T20:04:28Z*
  - 7b74436 Merge pull request #38562 from rallytime/arch-install-docs
  - 8b1897a Update arch installation docs with correct package name
- **PR** #38560: (*Ch3LL*) fix api logfile | refs: #38585 @ *2017-01-04T19:03:17Z*
  - 0186070 Merge pull request #38560 from Ch3LL/fix_api_log
  - 1b45e96 fix api logfile
- **PR** #38531: (*rallytime*) Back-port #33601 to 2016.3 @ *2017-01-04T16:56:53Z*
  - **PR** #33601: (*mchugh19*) Fix slack engine to run on python2.6 | refs: #38531
  - 0056620 Merge pull request #38531 from rallytime/bp-33601
  - c36cb39 remove the unnecessary double trigger
  - 3841449 fix spacing lint error

  - 8c1defc Remove uncessary type from alias commands. Deduplicate alias handling to autodetect function selection. Add error reporting to slack connectivty problems. Cleanup slack's unicode conversion
  - c2f23bc Fix slack engine to run on python2.6
- **PR** #38541: (*techhat*) Strip user:pass from cached URLs @ *2017-01-04T15:39:57Z*
  - **ISSUE** #38187: (*curiositycasualty*) username/password saved as cleartext when using URIs with user:pass@ format | refs: #38541
  - 50242c7 Merge pull request #38541 from techhat/issue38187
  - eae3a43 Strip user:pass from cached URLs
- **PR** #38554: (*multani*) Fix YAML deserialization of unicode @ *2017-01-04T15:31:16Z*
  - **ISSUE** #30454: (*favoretti*) Using yaml serializer inside jinja template results in unicode being prepended by `!!python/unicode' | refs: #38554 #38554 #30481
  - **PR** #30481: (*basepi*) Add yaml_safe jinja filter | refs: #38554
  - 325dc56 Merge pull request #38554 from multani/fix/30454
  - 2e7f743 yaml: support unicode serialization/deserialization
  - df76113 jinja: test the ``yaml'' filter with ordered dicts
  - f7712d4 Revert ``Add yaml_safe filter''
- 4ddbc2e add note about pyVmomi locale workaround (#38536)
  - **PR** #38536: (*UtahDave*) add note about pyVmomi locale workaround
- 1c951d1 fix gce image bug (#38542)
  - **ISSUE** #38353: (*Ch3LL*) salt-cloud gce specifying | refs: #38542 #38542
  - **PR** #38542: (*Ch3LL*) fix gce image bug
- **PR** #38487: (*gtmanfred*) Fix crontab issues with spaces @ *2017-01-01T20:33:29Z*
  - **ISSUE** #38449: (*swalladge*) Parsing issues in *list_tab* (salt/modules/cron.py) | refs: #38487
  - ec60f9c Merge pull request #38487 from gtmanfred/2016.3
  - 048b9f6 add test
  - c480c11 allow spaces in cron env
  - c529ec8 allow crons to have multiple spaces
- **PR** #38491: (*gtmanfred*) Use UTC for timing in case timezone changes @ *2017-01-01T20:30:57Z*
  - **ISSUE** #37684: (*thusoy*) State execution duration is timezone-dependent | refs: #38491
  - c5ba11b Merge pull request #38491 from gtmanfred/timing
  - 79368c7 Use UTC for timing in case timezone changes
- **PR** #38503: (*jinm*) Hash type fallback for file management @ *2017-01-01T17:36:51Z*
  - **ISSUE** #38472: (*jinm*) file.managed Unable to manage file: `hash_type' (2016.3.4) | refs: #38503
  - 86f0aa0 Merge pull request #38503 from jinm/issue_38472_jinm
  - 0cd9df2 Hash type fallback for file management
- **PR** #38457: (*bshelton229*) Stops git.latest checking for local changes in a bare repo @ *2016-12-30T14:28:47Z*
  - ed2ba4b Merge pull request #38457 from bshelton229/git-latest-head-bug

  - 558e7a7 Stops git.latest checking for local changes in a bare repo
- **PR** #38385: (*dragon788*) Use unambigous long names with double dashes @ *2016-12-29T17:10:48Z*
  - 36e21b2 Merge pull request #38385 from dragon788/2016.3-double-dash
  - 86c4b56 Newline for lint compat
  - 9d9b686 Address review comments, consistency of quotes
  - df9bd5e Use unambigous long names with double dashes
- **PR** #38474: (*cachedout*) Allow an existing ioloop to be passed to salt-key @ *2016-12-29T16:28:51Z*
  - **ISSUE** #38209: (*limited*) Accepting a minion causes tornado to exit | refs: #38474
  - 59f2560 Merge pull request #38474 from cachedout/key_loop
  - de50453 Allow an existing ioloop to be passed to salt-key
- **PR** #38467: (*gtmanfred*) file.line fail with mode=delete @ *2016-12-28T20:00:33Z*
  - **ISSUE** #38438: (*jf*) file.line with mode=delete breaks on empty file | refs: #38467
  - 3d0c752 Merge pull request #38467 from gtmanfred/2016.3
  - 7b7c6b3 file.line fail with mode=delete
- **PR** #38434: (*slinn0*) Make sysctl.persist fail when failing to set a value into the running kernel @ *2016-12-27T15:37:53Z*
  - 940025d Merge pull request #38434 from slinn0/issue_38433_fixes
  - 22af87a Fixes for https://github.com/saltstack/salt/issues/38433
- e5eb512 Update deprecation notices to the correct version (#38421)
  - **PR** #38421: (*rallytime*) Update deprecation notices to the correct version
  - **PR** #38420: (*rallytime*) Removed various deprecation notices from salt/modules/* files | refs: #38421
- 9ce5331 file.managed: Fix failure when filename contains unicode chars (#38415)
  - **ISSUE** #38282: (*sash-kan*) file.managed fails when file (which contains utf-characters in the name) exists | refs: #38415
  - **PR** #38415: (*terminalmage*) file.managed: Fix failure when filename contains unicode chars
- **PR** #38419: (*Ch3LL*) fix scsci docs example @ *2016-12-22T18:57:51Z*
  - 2cdb59d Merge pull request #38419 from Ch3LL/fix_doc_scsi
  - 234043b fix scsci docs example
- 2725352 Improve pillar documentation (#38407)
  - **PR** #38407: (*terminalmage*) Improve pillar documentation
- **PR** #38398: (*terminalmage*) Fix call to file.get_managed in cron.file state @ *2016-12-22T16:46:14Z*
  - **ISSUE** #38372: (*fanirama*) Issue with cron.file. Source: salt://path/to/crontab_file not found | refs: #38398
  - 423b1fd Merge pull request #38398 from terminalmage/issue38372
  - c80dbaa Fix call to file.get_managed in cron.file state
- 5a33d1e Fix http.query when result has no text (#38382)
  - **PR** #38382: (*heewa*) Fix http.query when result has no text
- **PR** #38390: (*meaksh*) Add ``try-restart'' to fix autorestarting on SUSE systems @ *2016-12-21T16:06:24Z*

  - b74b5c7 Merge pull request #38390 from meaksh/2016.3-fix-try-restart-for-autorestarting-on-SUSE-systems
  - de6ec05 add try-restart to fix autorestarting on SUSE systems
- **PR** #38221: (*UtahDave*) Fix default returner @ *2016-12-20T20:34:36Z*
  - 2c3a397 Merge pull request #38221 from UtahDave/fix_default_returner
  - 3856407 remove a blank line to satisfy linter
  - 9c248aa validate return opt, remove default.
  - 8bb37f9 specify allowed types and default for ``returner''
  - 11863a4 add examples of default minion returners
  - e7c6012 add support for default returners using *return*
- **PR** #38288: (*terminalmage*) archive.extracted: don't try to cache local sources (2016.3 branch) @ *2016-12-18T13:07:11Z*
  - 09d9cff Merge pull request #38288 from terminalmage/archive-extracted-local-source-2016.3
  - 845e3d0 Update tests to reflect change in cache behavior
  - 5a08d7c archive.extracted: don't try to cache local sources (2016.3 branch)
- **PR** #38312: (*cro*) Backport feature allowing proxy config to live in pillar OR /etc/salt/proxy @ *2016-12-18T12:39:01Z*
  - bf37667 Merge pull request #38312 from cro/proxy_config_in_cfg
  - 2006c40 Typo
  - 689d95b Backport feature allowing proxy config to live in pillar OR /etc/salt/proxy.
- **PR** #38320: (*rallytime*) Cleanup doc internal markup references @ *2016-12-18T12:31:28Z*
  - **ISSUE** #12788: (*whiteinge*) Comb through docs to replace :doc: roles with :ref: | refs: #38320
  - c83db5a Merge pull request #38320 from rallytime/cleanup-doc-refs
  - 62978cb Don't check the doc/conf.py file for doc markup refs
  - 770e732 Add a unit test to search for new doc markup refs
  - 5c42a36 Remove ":doc:" references from all doc/topics/installation/* files
  - 23bce1c Remove ":doc:" references from all doc/topics/releases/* files
  - 4aafa41 Remove ":doc:" references from a bunch of doc/* files
  - 02bfe79 Remove more ":doc:" references from doc/* files
  - 6e32267 Remove ":doc:" references in salt/* files
- 6367ca7 Add nick to args for create_multi (#38281)
  - **PR** #38281: (*mikejford*) Add nick to args for create_multi
- **PR** #38313: (*dragon788*) 2016.3 chocolatey fix @ *2016-12-16T17:20:39Z*
  - **ISSUE** #38290: (*dragon788*) Need to use machine automation friendly output | refs: #38313
  - 235682b Merge pull request #38313 from dragon788/2016.3-chocolatey-fix
  - 1f5fc17 Use machine readable output for list
  - cdbd2fb Added limit-output to eliminate false packages

- **PR** #38279: (*rallytime*) Add docs for syndic_wait setting @ *2016-12-15T18:30:31Z*
  - **ISSUE** #38174: (*NickDubelman*) [syndic] Why can't a syndic node signal when all of it's minions have returned? | refs: #38279
  - **ISSUE** #32400: (*rallytime*) Document Default Config Values | refs: #38279
  - 9e78ddc Merge pull request #38279 from rallytime/fix-38174
  - 4a62d01 Add docs for syndic_wait setting
- **PR** #38248: (*meaksh*) Successfully exit of salt-api child processes when SIGTERM is received @ *2016-12-15T09:16:27Z*
  - fc9e1df Merge pull request #38248 from meaksh/salt-api-successfully-close-child-processes
  - ee6eae9 Successfully exit of salt-api child processes when SIGTERM.
- **PR** #38254: (*terminalmage*) Also check if pillarenv is in opts @ *2016-12-15T09:10:24Z*
  - 3c718ed Merge pull request #38254 from terminalmage/check-pillarenv
  - fa9ad31 Also check if pillarenv is in opts
- 6b9060c [2016.3] Bump latest release version to 2016.11.1 (#38256)
  - **PR** #38256: (*rallytime*) [2016.3] Bump latest release version to 2016.11.1
- **PR** #38198: (*vutny*) Add missing requirements for running unit tests: libcloud and boto3 @ *2016-12-13T14:12:20Z*
  - 004e46a Merge pull request #38198 from vutny/unit-tests-require-libcloud-boto3
  - a6098ba Remove note about SaltTesting installation, now it is in the requirements
  - 004bff1 Add missing requirements for running unit tests: libcloud and boto3
- **PR** #38213: (*rallytime*) Skip test_cert_info tls unit test on pyOpenSSL upstream errors @ *2016-12-13T12:05:01Z*
  - 9d497bc Merge pull request #38213 from rallytime/skip-tls-test
  - bdb807f Skip test_cert_info tls unit test on pyOpenSSL upstream errors
- **PR** #38224: (*whiteinge*) Allow CORS OPTIONS requests to be unauthenticated @ *2016-12-13T12:02:30Z*
  - 203109d Merge pull request #38224 from whiteinge/cors-options-unauthed
  - de4d322 Allow CORS OPTIONS requests to be unauthenticated
- **PR** #38223: (*whiteinge*) Add root_dir to salt-api file paths @ *2016-12-13T07:44:19Z*
  - **PR** #37272: (*vutny*) Get default logging level and log file from default opts dict | refs: #38223
  - 721a5fe Merge pull request #38223 from whiteinge/salt-api-root_dirs
  - bfbf390 Add root_dir to salt-api file paths
- **PR** #38191: (*terminalmage*) Clarify the fact that git_pillar.update does not fast-forward @ *2016-12-12T09:45:48Z*
  - **ISSUE** #38162: (*747project*) git_pillar does not detect changes to remote repository when told to update | refs: #38191
  - 70f7d22 Merge pull request #38191 from terminalmage/issue38162
  - 1ae543a Clarify the fact that git_pillar.update does not fast-forward
- **PR** #38194: (*vutny*) Document the requirements for running ZeroMQ-based integration tests @ *2016-12-12T09:42:11Z*
  - 28171cb Merge pull request #38194 from vutny/integration-test-requirements-doc

  - e9f419f Document the requirements for running ZeroMQ-based integration tests
- **PR** #38185: (*rallytime*) Back-port #38181 to 2016.3 @ *2016-12-09T22:27:44Z*
  - **PR** #38181: (*rallytime*) Reset socket default timeout to None (fixes daemons_tests failures) | refs: #38185
  - a4ef037 Merge pull request #38185 from rallytime/bp-38181
  - 609f814 Reset socket default timeout to None (fixes daemons_tests failures)
- **PR** #38163: (*Ch3LL*) enabled ec2 cloud tests @ *2016-12-09T18:01:57Z*
  - 65b2ad7 Merge pull request #38163 from Ch3LL/enabled_ec2_cloud
  - be74c45 enabled ec2 cloud tests
- **PR** #38177: (*vutny*) Correct *cp.get_file_str* docstring and add integration tests @ *2016-12-09T16:55:35Z*
  - b63f74e Merge pull request #38177 from vutny/fix-cp-get-file-str
  - a449980 Correct *cp.get_file_str* docstring and add integration tests
- **PR** #38153: (*vutny*) Master config includes may contain errors and be safely skipped @ *2016-12-08T17:43:34Z*
  - 7596313 Merge pull request #38153 from vutny/master-includes-error-tolerance
  - cd0154e Master config includes may contain errors and be safely skipped
- 86091db Skip daemon unit tests when running on Python 2.6 (#38134)
  - **PR** #38134: (*rallytime*) Skip daemon unit tests when running on Python 2.6
- **PR** #38102: (*rallytime*) Add False + msg tuple return if requests is missing for zenoss module @ *2016-12-07T13:24:37Z*
  - **ISSUE** #38091: (*tjyang*) [WARNING] salt.loaded.int.module.zenoss.__virtual__() is wrongly returning *None*. | refs: #38102
  - d3d98fd4 Merge pull request #38102 from rallytime/fix-38091
  - 4f79d5a Add False + msg tuple return if requests is missing for zenoss module
- **PR** #38104: (*rallytime*) Back-port #36794 to 2016.3 @ *2016-12-07T13:23:48Z*
  - **ISSUE** #36707: (*do3meli*) slow FreeBSD sysctl module with test=true | refs: #36794
  - **PR** #36794: (*do3meli*) FreeBSD sysctl module now handels config_file parameter in show method | refs: #38104
  - 8c8cbc2 Merge pull request #38104 from rallytime/bp-36794
  - c906c8a Pylint fixes
  - da3ebf8 FreeBSD sysctl module now handels config_file parameter in show method
- **PR** #38083: (*twangboy*) Only delete .sls files from winrepo-ng [DO NOT MERGE FORWARD] @ *2016-12-06T14:13:35Z*
  - **ISSUE** #35342: (*morganwillcock*) win_pkg: refresh_db doesn't remove cached items which have been renamed or removed | refs: #38083
  - fbc8776 Merge pull request #38083 from twangboy/fix_refresh_db
  - 978af6d Remove only .sls files from the cached winrepo-ng
- **PR** #38059: (*rallytime*) Call exec_test for the Syndic daemon in tests.unit.daemons_test.py @ *2016-12-04T04:18:41Z*
  - **PR** #38057: (*rallytime*) [2016.11] Merge forward from 2016.3 to 2016.11 | refs: #38059

  - **PR** #38034: (*cachedout*) Modify daemons test to use multiprocessing | refs: #38059
  - 9dcfdee Merge pull request #38059 from rallytime/daemons-test-fix
  - eb372b2 Add missing ``not'' statement: The last syndic test should assertFalse()
  - 4e10f8e Call exec_test for the Syndic daemon in tests.unit.daemons_test.py
- **PR** #38039: (*rallytime*) Check to see if a line is already commented before moving on @ *2016-12-02T20:08:35Z*
  - **ISSUE** #37939: (*Talkless*) file.comment always report changes in test=True mode | refs: #38039
  - 9cd42b9 Merge pull request #38039 from rallytime/fix-37939
  - 1da7aac Update unit tests to account for additional file.search call
  - 8a685b1 Check to see if a line is already commented before moving on
  - f2c0455 Write an integration test demonstrating the issue
- **PR** #38045: (*terminalmage*) yumpkg.py: don't include non-upgrade versions found by ``yum list available'' @ *2016-12-02T20:07:38Z*
  - **ISSUE** #38037: (*dmurphy18*) pkg.latest and yumpkg.latest_version return incorrect package versions 2016.3 and 2016.11 | refs: #38045
  - a34a763 Merge pull request #38045 from terminalmage/issue38037
  - 6528950 Simplify logic for matching desired pkg arch with actual pkg arch
  - 3babbcd yumpkg.py: don't include non-upgrade versions found by ``yum list available''
- 6724fe4 Modify daemons test to use multiprocessing (#38034)
  - **PR** #38034: (*cachedout*) Modify daemons test to use multiprocessing | refs: #38059
- **PR** #37995: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3 @ *2016-11-30T20:12:55Z*
  - **PR** #37978: (*terminalmage*) Add clarifying language to ext_pillar_first docs
  - 6942d5d Merge pull request #37995 from rallytime/merge-2016.3
  - b44e179 Merge branch `2015.8' into `2016.3'
    - 7a7e367 Merge pull request #37978 from terminalmage/ext_pillar_first-docs
      - 61ed9a8 Add clarifying language to ext_pillar_first docs
- cd66c17 fix broken yaml code block (#38002)
  - **PR** #38002: (*laleocen*) fix broken yaml code block
- **PR** #37912: (*attiasr*) fix encoding problem aws responses @ *2016-11-30T18:10:30Z*
  - **ISSUE** #35088: (*Modulus*) salt/cloud/ec2.py encoding problems. | refs: #37912
  - 3dd45fb Merge pull request #37912 from attiasr/fix_aws_response_encoding
  - ba4ec4e use Requests result encoding to encode the text
  - abe4eb3 fix encoding problem aws responses
- **PR** #37950: (*vutny*) Set default Salt Master address for a Syndic (like for a Minion) @ *2016-11-30T18:09:04Z*
  - 69a74a4 Merge pull request #37950 from vutny/fix-starting-up-syndic
  - 7d9bc9a syndic_master: correct default value, documentation and example config
  - 92a7c7e Set default Salt Master address for a Syndic (like for a Minion)
- 7f269bc Add clarification on expr_form usage and future deprecation (#37964)

  - **PR** #37964: (*terminalmage*) Add clarification on expr_form usage and future deprecation
- 1001987 Catch possible exception from lsb_release (#37962)
  - **ISSUE** #37867: (*tobiasBora*) Bug into lsb_release that crash salt | refs: #37962
  - **PR** #37962: (*cachedout*) Catch possible exception from lsb_release
- 330021c Handle empty tokens safely (#37961)
  - **ISSUE** #37945: (*gstachowiak*) Missing exception handling in salt.master.Maintenance. Process never completes. | refs: #37961
  - **PR** #37961: (*cachedout*) Handle empty tokens safely
- **PR** #37272: (*vutny*) Get default logging level and log file from default opts dict | refs: #38223 @ *2016-11-28T23:04:20Z*
  - ea46639 Merge pull request #37272 from vutny/fix-getting-default-logging-opts
  - e5ce523 Fix description in the Salt Syndic usage info
  - 518a3dd Add unit tests for Salt parsers processing logging options
  - 83d6a44 Add *ssh_log_file* option to master config and documentation
  - c8a0915 Fix configuration example and documentation for *syndic_log_file* option
  - e64dd3e Correct default attributes for various parser classes
  - 82a2e21 Fix default usage string for Salt command line programs
  - 45dffa2 Fix readding and updating logfile and pidfile config options for Salt API
  - f47253c Fix reading and applying Salt Cloud default configuration
  - fad5bec Work with a copy of default opts dictionaries
  - b7c2481 Fix *log_level_logfile* config value type
  - 1bd76a1 Fix setting temporary log level if CLI option omitted
  - 121848c Fix obtaining *log_granular_levels* config setting
  - 44cf07f Make CLI options take precedence for setting up logfile_logger
  - 61afaf1 Fix setting option attributes when processing *log_level* and *log_file*
  - 3c60e23 Fix processing of *log_level_logfile* config setting
  - 55a0af5 Use attribute functions for getting/setting options and config values
  - c25f2d0 Fix getting Salt API default logfile option
  - f242237 Remove processing of unused and undocumented *cli_*_log_** config options
  - 2065e83 Get default logging level and file from default opts dict
- **PR** #37925: (*kontrolld*) Fix missing ipv6 options centos network @ *2016-11-28T22:38:43Z*
  - f2f957d Merge pull request #37925 from kontrolld/add-ipv6-centos-network
  - ac2b477 Adding IPv6 functionality for CentOS /etc/sysconfig/network
- **PR** #37899: (*DmitryKuzmenko*) Clear functions context in schedule tasks for ZeroMQ. @ *2016-11-28T22:23:45Z*
  - **ISSUE** #37059: (*basepi*) Beacon fileserver operations cause scheduled jobs with fileserver operations to hang | refs: #37899
  - c07ad11 Merge pull request #37899 from DSRCorporation/bugs/37059_schedule_task_hang

  - 9497748 Clear functions context in schedule tasks for ZeroMQ.
- **PR** #37928: (*techhat*) Don't modify self.opts directly @ *2016-11-28T21:07:40Z*
  - **ISSUE** #37737: (*b-harper*) python client api CloudClient multiple calls needed | refs: #37928
  - a55519d Merge pull request #37928 from techhat/issue37737
  - a09a60e Don't modify self.opts directly
- **PR** #37929: (*gtmanfred*) add list_nodes_min to nova driver @ *2016-11-28T21:05:40Z*
  - 9d17f1c Merge pull request #37929 from gtmanfred/2016.3
  - c7d2c73 add list_nodes_min to nova driver
- **PR** #37926: (*kontrolld*) Fixes no IPv6 functionality in /etc/sysconfig/network @ *2016-11-28T20:40:00Z*
  - 3bb743b Merge pull request #37926 from kontrolld/fix-ipv6-centos-network
  - 3ed42e5 updated
  - 3b3bc4f Fixes no IPv6 functionality in /etc/sysconfig/network
- **PR** #37921: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3 @ *2016-11-28T19:54:40Z*
  - **PR** #37918: (*rallytime*) [2015.8] Update version numbers in doc config for 2016.11.0 release
  - **PR** #37914: (*terminalmage*) Update earlier release channels' docs with Carbon release notes
  - 271170a Merge pull request #37921 from rallytime/merge-2016.3
  - 523a67c Merge branch `2015.8' into `2016.3'
    * 4cdc6cf Update earlier release channels' docs with Carbon release notes (#37914)
    * d31491a [2015.8] Update version numbers in doc config for 2016.11.0 release (#37918)
- **PR** #37924: (*cachedout*) Update test for new gem ver @ *2016-11-28T18:17:53Z*
  - 6cd6429 Merge pull request #37924 from cachedout/fix_gem_states
  - 894cca3 Update test for new gem ver
- **PR** #37916: (*rallytime*) [2016.3] Update version numbers in doc config for 2016.11.0 release @ *2016-11-28T17:09:08Z*
  - c35ba1f Merge pull request #37916 from rallytime/doc-update-2016.3
  - bd40592 [2016.3] Update version numbers in doc config for 2016.11.0 release
- **PR** #37785: (*AaronM-Cloudtek*) respect trailing dot in ddns name parameter @ *2016-11-28T14:02:10Z*
  - **ISSUE** #37287: (*AaronM-Cloudtek*) salt.states.ddns.present: `NS' record type always returns as changed | refs: #37785
  - e13a248 Merge pull request #37785 from Cloudtek/ddns-respect-trailing-dot
  - 262e3b3 respect trailing dot in ddns name parameter
- **PR** #37895: (*fj40crawler*) Change return value for salt/states/augeas.py to be True instead of N... @ *2016-11-28T13:49:27Z*
  - **ISSUE** #37870: (*fj40crawler*) salt.states.augeas.change returns None when test=True | refs: #37895
  - c03b389 Merge pull request #37895 from fj40crawler/fix-augeas-return-for-test
  - ddc238d Fixed augeas_test.py to match True v.s. None for test_change_in_test_mode
  - ef75c45 Merge branch `2016.3' of github.com:saltstack/salt into fix-augeas-return-for-test

  - b0fe0cd Change return value for salt/states/augeas.py to be True instead of None for cases where salt is run with test=True. Fixes #37870

- **PR** #37907: (*Talkless*) Fix server trust in test run of svn.latest @ *2016-11-28T13:47:39Z*
  - fdbc31e Merge pull request #37907 from Talkless/patch-2
  - 072a319 Fix server trust in test run of svn.latest
- **PR** #37896: (*toanju*) rh networking: add missing values @ *2016-11-27T10:30:35Z*
  - f39fdf4 Merge pull request #37896 from toanju/2016.3
  - c953041 rh networking: add missing values
- **PR** #37886: (*bdrung*) Fix various spelling mistakes @ *2016-11-25T02:59:36Z*
  - ea935c5 Merge pull request #37886 from bdrung/fix-typos
  - 9a51ba5 Fix various spelling mistakes
- **PR** #37736: (*dhaines*) handle semodule version >=2.4 (#37732) and fix typo @ *2016-11-24T01:44:20Z*
  - **ISSUE** #37732: (*dhaines*) list_semod() (from modules/selinux.py) incompatible with policycoreutils-2.5 (RHEL 7.3) | refs: #37736
  - 371b0a8 Merge pull request #37736 from dhaines/issue-37732
  - 7ef590a Update selinux.py
  - 516a67e fix indexing error
  - 4e49c1e fix typo
  - b16f2d8 handle semodule version >=2.4 (#37732) and fix typo
- **PR** #37797: (*clan*) check count of columns after split @ *2016-11-24T01:28:59Z*
  - 87aeb66 Merge pull request #37797 from clan/extfs
  - acf0f96 check count of columns after split
- **PR** #37762: (*twangboy*) Add pre_versions to chocolatey.installed @ *2016-11-24T01:27:29Z*
  - f7c7109 Merge pull request #37762 from twangboy/fix_chocolatey_state
  - 9696b6d Use keyword args instead of relying on ordering
  - 398eaa0 Add pre_versions to the available arguments
- **PR** #37866: (*meaksh*) Backport #37149 #36938 and #36784 to 2016.3 @ *2016-11-23T21:54:17Z*
  - **PR** #37857: (*meaksh*) Backport #37149 and #36938 to 2015.8 | refs: #37866
  - **PR** #37856: (*meaksh*) Backport #36784 to 2015.8 | refs: #37866
  - **PR** #37149: (*dincamihai*) Fix pkg.latest_version when latest already installed | refs: #37866 #37857
  - **PR** #36938: (*wanparo*) acl.delfacl: fix position of -X option to setfacl | refs: #37866 #37857
  - **PR** #36784: (*moio*) OS grains for SLES Expanded Support | refs: #37866 #37856
  - 56baa92 Merge pull request #37866 from meaksh/2016.3-bp-37149-36938-36784
  - 9d8d578 Fix pkg.latest_version when latest already installed
  - ffca0d4 - acl.delfacl: fix position of -X option to setfacl
  - 3dfed6b Adjust linux_acl unit test argument ordering
  - f185ecd core.py: quote style fixed

  - 8404d13 Setting up OS grains for SLES Expanded Support (SUSE's Red Hat compatible platform)
- **PR** #37863: (*rallytime*) Back-port #36893 to 2016.3 @ *2016-11-23T17:09:09Z*
  - **ISSUE** #32829: (*tyhunt99*) Dockerng appears to not be using docker registries pillar data | refs: #36893 #36893
  - **PR** #36893: (*tyhunt99*) add option to force a reauth for a docker registry | refs: #37863
  - d0cc7f0 Merge pull request #37863 from rallytime/bp-36893
  - 4c70534 Add versionadded to reauth option in dockerng module
  - 5ca2c38 added documentation for the new reuth option in docker registry configuration
  - 5b0c11a add option to force a reauth for a docker registry
- b17a118 add multiline encryption documentation to nacl (#37847)
  - **PR** #37847: (*laleocen*) add multiline encryption documentation to nacl
- aa37487 add missing chloginclass (#37827)
  - **ISSUE** #37787: (*elyulka*) user.present state fails to change loginclass on FreeBSD | refs: #37827
  - **PR** #37827: (*silenius*) add missing chloginclass
- 0e74bad Update branch refs to more relevant branch (#37826)
  - **PR** #37826: (*rallytime*) Update branch refs to more relevant branch
  - **PR** #37822: (*laleocen*) add documentation for multiline encryption using nacl | refs: #37826
- 6a9b49c Add ``names'' option to file state docs: point users to highstate doc examples (#37823)
  - **ISSUE** #19269: (*markuskramerIgitt*) Undocumented feature *names:* of *file.directory* | refs: #37823
  - **PR** #37823: (*rallytime*) Add ``names'' option to file state docs: point users to highstate doc examples
- aaf587d Clarify keystone.user_present password state docs with default behavior (#37821)
  - **ISSUE** #15697: (*arthurlogilab*) keystone.user_present should not re-set the password when user exists | refs: #37821
  - **PR** #37821: (*rallytime*) Clarify keystone.user_present password state docs with default behavior
- c300863 Add some dependency documentation to libvirt docs (#37820)
  - **ISSUE** #5999: (*pille*) libvirt.keys does not work | refs: #37820
  - **PR** #37820: (*rallytime*) Add some dependency documentation to libvirt docs
- **PR** #37772: (*bdrung*) Support initializing OpenSSL 1.1 @ *2016-11-21T20:28:51Z*
  - 485270f Merge pull request #37772 from bdrung/openssl1.1
  - 819c965 Support initializing OpenSSL 1.1
- 4910912 Update orchestrate runner file.copy doc example (#37817)
  - **ISSUE** #37383: (*edwardsdanielj*) Orchestration arguments (kwarg) not being interperted / How I learned to stop worrying about documentation and love experimenting | refs: #37817
  - **PR** #37817: (*rallytime*) Update orchestrate runner file.copy doc example
- **PR** #37816: (*rallytime*) Back-port #32157 to 2016.3 @ *2016-11-21T20:22:27Z*
  - **ISSUE** #37653: (*gravyboat*) Salt.cron docs don't wrap @hourly and @daily correctly in quotes for the examples | refs: #37816

  - **ISSUE** #31953: (*sjorge*) Documentation for salt.states.cron is incorrect | refs: #32157
  - **PR** #32157: (*cachedout*) Add quotes to cron doc | refs: #37816
  - c5d3d8b Merge pull request #37816 from rallytime/bp-32157
  - d9c2971 Add quotes to cron doc
- **PR** #37812: (*rallytime*) Back-port #37790 to 2016.3 @ *2016-11-21T18:46:40Z*
  - **PR** #37790: (*sofixa*) Update cloud/proxmox.rst with more options and LXC | refs: #37812
  - 97e6b6a Merge pull request #37812 from rallytime/bp-37790
  - ca3b6e7 Update proxmox.rst with more options and LXC
- **PR** #37811: (*rallytime*) Back-port #37789 to 2016.3 @ *2016-11-21T18:46:21Z*
  - **ISSUE** #37751: (*freach*) Documentation salt.states.dockerng.running: ``privileged'' property undocumented | refs: #37789
  - **PR** #37789: (*fedusia*) issue: 37751 | refs: #37811
  - 27703c5 Merge pull request #37811 from rallytime/bp-37789
  - ba3fef4 fix comment
  - a021f76 issue: 37751 Add documentation for option privileged
- **PR** #37810: (*rallytime*) Back-port #37775 to 2016.3 @ *2016-11-21T18:45:53Z*
  - **PR** #37775: (*calve*) Document *python* argument in *salt.states.virtualenv_mod* | refs: #37810
  - adac9d7 Merge pull request #37810 from rallytime/bp-37775
  - 2bed914 Document *python* argument in *salt.states.virtualenv_mod*
- 7de7844 Add nodegroup check to ckminions (#37763)
  - **ISSUE** #37742: (*blaketmiller*) Cannot match on nodegroup when checking minions | refs: #37763
  - **PR** #37763: (*cachedout*) Add nodegroup check to ckminions
- d674369 Fix ip/port issue with salt-call (#37766)
  - **ISSUE** #37725: (*secumod*) salt-call incorrectly parses master hostname:port from minion config | refs: #37766
  - **PR** #37766: (*cachedout*) Fix ip/port issue with salt-call
- c62ff6b Add thorium path to syspaths (#37767)
  - **ISSUE** #33709: (*msummers42*) Any/All Salt-SSH invocations in 2016.3.0 Fails with AttributeError: `module' object has no attribute `BASE_THORIUM_ROOTS_DIR' | refs: #37767
  - **PR** #37767: (*cachedout*) Add thorium path to syspaths
- **PR** #37760: (*hu-dabao*) Fix couchbase returner and add couple of more features @ *2016-11-18T00:28:23Z*
  - bff949f Merge pull request #37760 from hu-dabao/fix_cb_returner
  - de372f2 1. returner no need to check whether the jid exists for external job cache setup 2. add full_ret to return doc so that the document will be informative 3. make ttl as a config attribute because salt-minion does not have keep_jobs attribute 4. add password into config attribute 5. update the documents accordingly
- **PR** #37738: (*terminalmage*) Allow pillar.get to retrieve fresh pillar data when saltenv passed @ *2016-11-17T23:13:04Z*

  - **ISSUE** #36629: (*yhekma*) The pillar run module does not honor saltenv | refs: #37738
  - 1f976ac Merge pull request #37738 from terminalmage/issue36629
  - da46678 Allow pillar.get to retrieve fresh pillar data when saltenv passed
- 7aee7fc Switch default filter tag for ONE resources from user only to all resources (#37745)
  - **PR** #37745: (*cro*) Switch default filter tag for ONE resources from user only to all resources
- 6ba8d4e check for SERVICE_DIR in __virtual__ in salt.modules.daemontools (#37748)
  - **ISSUE** #37498: (*githubcdr*) service.restart salt-minion fails on Ubuntu 14.04.5 LTS | refs: #37748 #38587
  - **PR** #37748: (*silenius*) check for SERVICE_DIR in __virtual__ in salt.modules.daemontools
- **PR** #37735: (*Ch3LL*) change size and image of joyent profile @ *2016-11-16T21:07:52Z*
  - **ISSUE** #37734: (*Ch3LL*) Joyent Cloud Size Issue | refs: #37735
  - fa78831 Merge pull request #37735 from Ch3LL/fix_joyent_profile
  - 9ef41dc change size and image of joyent profile
- **PR** #37731: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3 @ *2016-11-16T17:13:02Z*
  - **PR** #37718: (*terminalmage*) Fix incorrectly-formatted RST
  - 98e25c6 Merge pull request #37731 from rallytime/merge-2016.3
  - ec13897 Merge branch `2015.8' into `2016.3'
    - f417dbb Merge pull request #37718 from terminalmage/docs
      - 23b8b2a Fix incorrectly-formatted RST
- 3be9ab4 Warn on AES test for systems with > 1 core (#37724)
  - **PR** #37724: (*cachedout*) Warn on AES test for systems with > 1 core
- **PR** #37721: (*terminalmage*) Fix for pillar setting `environment' key in __gen_opts() @ *2016-11-16T16:04:53Z*
  - 35655d5 Merge pull request #37721 from terminalmage/zd909
  - acdd551 Update git_pillar docs to reflect info from bugfix
  - 433737d Fix for pillar setting `environment' key in __gen_opts()
- **PR** #37719: (*terminalmage*) Fix incorrectly-formatted RST (2016.3 branch) @ *2016-11-16T08:20:53Z*
  - 99cda7c Merge pull request #37719 from terminalmage/docs-2016.3
  - f163b4c Fix incorrectly-formatted RST
- **PR** #37694: (*cachedout*) Catch differences in git URLs in npm state @ *2016-11-16T01:56:18Z*
  - 8dea695 Merge pull request #37694 from cachedout/npm_git
  - 0e3bc23 Catch differences in git URLs in npm state
- **PR** #37705: (*rallytime*) Don't overwrite the ``key'' variable passed in to _listeners_present func @ *2016-11-15T21:26:37Z*
  - **ISSUE** #37665: (*kluoto*) boto_elb state fails as key is overwritten by the code | refs: #37705
  - 329448c Merge pull request #37705 from rallytime/fix-37665
  - 3b7e9c5 Don't overwrite the ``key'' variable passed in to _listeners_present func
- **PR** #37707: (*Ch3LL*) add timeout increase on azure tests @ *2016-11-15T21:24:25Z*

  - **PR** #37239: (*Ch3LL*) Fix cloud tests timeout | refs: #37707
  - ac9a316 Merge pull request #37707 from Ch3LL/fix_timeout_azure
  - 363122c add timeout increase on azure tests
- **PR** #37704: (*twangboy*) Fix test disabled 2016.3 [DO NOT MERGE FORWARD] @ *2016-11-15T16:48:52Z*
  - 1ece265 Merge pull request #37704 from twangboy/fix_test_disabled_2016.3
  - a0429cf Use nfsd instead of apsd for test_disabled
- **PR** #37690: (*twangboy*) Update pyzmq to 15.3.0 for 2016.3 [DO NOT MERGE FORWARD] @ *2016-11-15T03:10:36Z*
  - 44f05ac Merge pull request #37690 from twangboy/update_pyzmq_2016.3
  - cf55342 Update pyzmq to version 15.3.0
- **PR** #37680: (*rallytime*) Back-port #32965 to 2016.3 @ *2016-11-15T02:56:46Z*
  - **PR** #32965: (*kevinquinnyo*) Fix `present' option when used without `key_type' | refs: #37680
  - a743d8b Merge pull request #37680 from rallytime/bp-32965
  - 1865b13 Fix `present' option when used without `key_type'
- **PR** #37681: (*rallytime*) Back-port #35965 to 2016.3 @ *2016-11-14T21:19:22Z*
  - **ISSUE** #35964: (*edgan*) salt-ssh doesn't set the return code to non-zero on highstate rendering error | refs: #35965
  - **PR** #35965: (*edgan*) Set the return code to 1 on salt-ssh highstate errors | refs: #37681
  - 1c2d6ff Merge pull request #37681 from rallytime/bp-35965
  - 700f3fa Set the return code to 1 on salt-ssh highstate errors
- **PR** #37668: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3 @ *2016-11-14T15:43:25Z*
  - **PR** #37641: (*cro*) Add docs for rotate_aes_key
  - 1b456b5 Merge pull request #37668 from rallytime/merge-2016.3
  - ef684c6 Merge branch `2015.8' into `2016.3'
  - a01b665 Add docs for rotate_aes_key (#37641)
- **PR** #37625: (*cachedout*) Return with proper retcodes in batch mode @ *2016-11-12T20:29:09Z*
  - **ISSUE** #37492: (*JensRantil*) Failing *salt -b 1 minion state.highstate* has wrong exit code | refs: #37625
  - 305e51d Merge pull request #37625 from cachedout/issue_37492
  - b603152 Return with proper retcodes in batch mode
- **PR** #37639: (*rallytime*) Back-port #37607 to 2016.3 @ *2016-11-11T20:29:20Z*
  - **ISSUE** #34547: (*sebw*) salt-cloud deployment fails when deploy: True | refs: #37607
  - **PR** #37607: (*techhat*) Try the connection again, in case it's been reset | refs: #37639
  - **PR** #35673: (*cro*) Proxies don't handle reusing the SmartConnect instances very well. D... | refs: #37607
  - **PR** #34059: (*alexbleotu*) Vmware common gh | refs: #37607
  - 7510cd4 Merge pull request #37639 from rallytime/bp-37607
  - 9914c93 Pylint: Remove kwargs that are not in the 2016.3 branch
  - d941e93 Disable pylint warning

  - 940ee49 Lint fix
  - 69893f0 Try the connection again, in case it's been reset
- **PR** #37638: (*rallytime*) Back-port #37349 to 2016.3 @ *2016-11-11T20:29:01Z*
  - **ISSUE** #37118: (*gtmanfred*) group in file.find module unable to be a list | refs: #37349 #37349
  - **PR** #37349: (*haeac*) Pull request for Bug #37118 | refs: #37638
  - 24ca960 Merge pull request #37638 from rallytime/bp-37349
  - ba2105b Fix for Bug #37118, the wrong parameter was being used to convert the group name to group id.
- **PR** #37644: (*Ch3LL*) digital ocean list_keypairs: increase limit for ssh keys parsed @ *2016-11-11T20:28:46Z*
  - **ISSUE** #37643: (*Ch3LL*) digital ocean list_keypairs limits to 20 keys | refs: #37644
  - e1e8b81 Merge pull request #37644 from Ch3LL/fix_37643
  - c02961a list_keypairs: increase limit for ssh keys parsed
- **PR** #37640: (*rallytime*) Add known issue #37541 to 2016.3.4 release notes @ *2016-11-11T20:28:12Z*
  - **ISSUE** #37541: (*yhekma*) salt-minion does not clean up temp files for templates | refs: #37540 #37640
  - a97c2ad Merge pull request #37640 from rallytime/update-release-notes
  - 6d6de12 Grammatical fix
  - 24d7f20 Add known issue #37541 to 2016.3.4 release notes
- **PR** #37642: (*cro*) Forward-port change from 2015.8 adding release note for rotate_aes_key @ *2016-11-11T20:27:07Z*
  - fab3eaa Merge pull request #37642 from cro/rotate_aes_doc
  - 1ca5b95 Forward-port change from 2015.8 adding release note for rotate_aes_key
- **PR** #37629: (*TronPaul*) fix __opts__ and provider being None in salt.utils.aws:get_location @ *2016-11-11T09:49:47Z*
  - **ISSUE** #37628: (*TronPaul*) [git 2016.3] Refreshing of an s3 file server results in an exception | refs: #37629
  - 4c07b35 Merge pull request #37629 from TronPaul/fix-s3fs-opts
  - a452cde fix __opts__ and provider being None issue
- **PR** #37481: (*thatch45*) Raet internal client reference fix @ *2016-11-11T04:39:41Z*
  - 200d9fc Merge pull request #37481 from thatch45/raet_client
  - 50d9111 Attempted fix, needs user verification
- **PR** #37611: (*jeanpralo*) Fix cmd batch raw @ *2016-11-11T02:53:58Z*
  - b14faf1 Merge pull request #37611 from jeanpralo/fix-cmd-batch-raw
  - 4f16840 add integration test for salt.client.LocalClient.cmd_batch
  - ead47e4 update ret dict to avoid hanging
  - 0a2f153 fix dict key for raw support to avoid exception
- **PR** #37614: (*gtmanfred*) remove redundant code @ *2016-11-11T02:49:13Z*
  - 35c8333 Merge pull request #37614 from gtmanfred/2016.3
  - 71c2df8 remove redundent code

- **PR** #37627: (*cachedout*) Exempt pip.iteritems from test_valid_docs test @ *2016-11-11T02:48:37Z*
  - 4fab707 Merge pull request #37627 from cachedout/pr-36706
  - 94df2f8 Exempt pip.iteritems from test_valid_docs test
- **PR** #36706: (*siccrusher*) Add basic sanity checks for env_vars in pip.install function @ *2016-11-11T02:47:16Z*
  - **ISSUE** #36644: (*b1naryth1ef*) env_vars not properly validated/casted to strings w/ virtualenv.manage/pip.install | refs: #36706
  - ee74f31 Merge pull request #36706 from siccrusher/fix_env_var_validation
  - fb27f8b Revert change
  - 79f3e83 Use fully-qualified path for six
  - 0ca1222 Update pip.py
  - b15de37 * Ensure src is python3 compatible
  - 0976a2d * Before passing on the env_vars dictionary ensure all values are strings. Fixes #36644
- **PR** #37626: (*cachedout*) Exit with proper retcode on hard client failures @ *2016-11-11T02:38:47Z*
  - **ISSUE** #37491: (*JensRantil*) ``Failed to authenticate! ...'' error should exit non-zero | refs: #37626
  - 902a975 Merge pull request #37626 from cachedout/issue_37491
  - bab9a72 Exit with proper retcode on hard client failures
- **PR** #37617: (*terminalmage*) Clarify docs for git_pillar dynamic env feature @ *2016-11-11T01:52:52Z*
  - 845f835 Merge pull request #37617 from terminalmage/git_pillar-docs
  - 8cdf5db Clarify docs for git_pillar dynamic env feature
- **PR** #36627: (*sjmh*) Skip rest of loop on failed func match @ *2016-11-10T23:47:12Z*
  - 3079d78 Merge pull request #36627 from sjmh/fix/auth_skip_nomatch
  - b3baaf3 Skip rest of loop on failed func match
- **PR** #37600: (*mcalmer*) change TIMEZONE on SUSE systems (bsc`#1008933`_) @ *2016-11-10T21:54:04Z*
  - **ISSUE** #1008933: (**)
  - a71e7c7 Merge pull request #37600 from mcalmer/fix-timezone-on-SUSE
  - 3530b54 change TIMEZONE on SUSE systems (bsc`#1008933`_)
- **PR** #37602: (*DmitryKuzmenko*) Handle master restart in appropriate places using *salt.event* listener. @ *2016-11-10T21:53:20Z*
  - **ISSUE** #37238: (*cmclaughlin*) Restarting master causes minion to hang | refs: #37438 #37602
  - **ISSUE** #37018: (*tsaridas*) get events from python | refs: #37438 #37602
  - **PR** #37438: (*DmitryKuzmenko*) Fix for #37238 salt hang on master restart | refs: #37602
  - 39b7587 Merge pull request #37602 from DSRCorporation/bugs/37238_salt_hang_on_master_restart
  - d3d987b Handle master restart in appropriate places using *salt.event* listener.
- **PR** #37608: (*gtmanfred*) allow multiline returns from docker for mac @ *2016-11-10T21:48:59Z*
  - 019e1a7 Merge pull request #37608 from gtmanfred/2016.3
  - 74aee1e allow multiline returns from docker for mac
- 71032f8 Documentation improvements and corrections (#37604)

  - **ISSUE** #37592: (*craigafinch*) State git.latest does not work with SSH | refs: #37604
  - **ISSUE** #37551: (*viict*) git.latest ``Not a valid commit name'' | refs: #37571 #37604
  - **PR** #37604: (*terminalmage*) Documentation improvements and corrections
- a7e09f9 Use existing VM's VDD size if not specified in the cloud profile (#37579)
  - **PR** #37579: (*pass-by-value*) Use existing VM's VDD size if not specified in the cloud profile
- **PR** #37540: (*yhekma*) Added prefix to tempfile for template @ *2016-11-10T00:37:18Z*
  - **ISSUE** #37541: (*yhekma*) salt-minion does not clean up temp files for templates | refs: #37540 #37640
  - fdd13b4 Merge pull request #37540 from yhekma/2016.3
  - 93a59f8 Added prefix to tempfile for template
- 5e80acc Update for m2crypto changes removing lhash (#37578)
  - **ISSUE** #37084: (*AaronM-Cloudtek*) x509.certificate_managed does not work with m2crypto >=0.25 | refs: #37578
  - **PR** #37578: (*clinta*) Update for m2crypto changes removing lhash
- 928462d fix example of function argument limiting (#37584)
  - **PR** #37584: (*clinta*) Fix eauth example for limiting args
- 2810b85 Add a test to ensure we don't check for fast-forward before fetching (#37571)
  - **ISSUE** #37551: (*viict*) git.latest ``Not a valid commit name'' | refs: #37571 #37604
  - **PR** #37571: (*terminalmage*) Add a test to ensure we don't check for fast-forward before fetching
- **PR** #37553: (*rallytime*) Back-port #37521 to 2016.3 @ *2016-11-08T23:11:07Z*
  - **ISSUE** #33645: (*ketzacoatl*) saltutil.sync_all does not sync custom pillar modules to masterless minions | refs: #33833
  - **ISSUE** #25297: (*Akilesh1597*) perform `refresh_pillar' as a part of `sync_all' | refs: #37521 #25361
  - **PR** #37521: (*genuss*) refresh_pillar() should be called always with refresh=True during saltutil.sync_all | refs: #37553
  - **PR** #33833: (*terminalmage*) Support syncing pillar modules to masterless minions | refs: #37521
  - **PR** #25361: (*tedski*) perform *refresh_pillar* as part of *sync_all* when *refresh=True* | refs: #37521
  - b01c247 Merge pull request #37553 from rallytime/bp-37521
  - 30f92b0 refresh_pillar() should be called always
- **PR** #37565: (*rallytime*) Back-port #37549 to 2016.3 @ *2016-11-08T23:10:25Z*
  - **PR** #37549: (*Mrten*) sqlite is not found in 2015.8 | refs: #37565
  - 694df30 Merge pull request #37565 from rallytime/bp-37549
  - c92a90b Update sqlite3.py
  - fb76557 sqlite is not found in 2015.8
- 2fc0b22 Fix regression in service.dead state (#37562)
  - **ISSUE** #37511: (*jdelic*) service.dead now only operates if the service file exists | refs: #37562
  - **PR** #37562: (*terminalmage*) Fix regression in service.dead state
- ac754db Skip config type checking for sdb values (#37560)

  - **ISSUE** #37554: (*sjmh*) salt-api doesn't dynamically re-read nodegroups configuration | refs: #37560
  - **PR** #37560: (*whiteinge*) Skip config type checking for sdb values
- 453319b Don't pass the vpc id to boto.vpc.create_internet_gateway func (#37556)
  - **PR** #37556: (*rallytime*) Don't pass the vpc id to boto.vpc.create_internet_gateway func
- 89b9417 Documentation rendering fixes (#37543)
  - **PR** #37543: (*multani*) Documentation rendering fixes
- **PR** #37457: (*rallytime*) Fixup file.line docs to be more clear and consistent @ *2016-11-08T00:29:20Z*
  - **ISSUE** #31081: (*JensRantil*) salt.modules.file.line documentation unclarities | refs: #37457
  - 96b8b9a Merge pull request #37457 from rallytime/fix-31081
  - 25821bb Clarify which modes use ``before'', ``after'', and ``indent'' options
  - 8b2d2b9 Clarify file.line state docs as well
  - b261589 Move note about using mode=insert with location options to mode section
  - db0b0ce Fixup file.line docs to be more clear and consistent
- **PR** #37526: (*twangboy*) Remove loop from dsc.apply_config @ *2016-11-08T00:23:11Z*
  - **ISSUE** #35799: (*davegiles*) dsc.apply_config hangs (no error) on empty directory on target | refs: #37526
  - 7de790f Merge pull request #37526 from twangboy/fix_35799
  - fc42609 Remove unnecessary format
  - c934a2b Remove the loop from apply_config
- **PR** #37534: (*rallytime*) Back-port fix needed from #37515 @ *2016-11-08T00:14:46Z*
  - **PR** #37515: (*rallytime*) [carbon] Merge forward from 2016.3 to carbon | refs: #37534 #37534
  - 94811df Merge pull request #37534 from rallytime/bp-merge-foward-fix
  - d1b2af1 Add missing source_hash_name args to a couple funcs
- **PR** #37533: (*whiteinge*) Return a 504 response instead of 500 for Salt timeouts @ *2016-11-08T00:14:15Z*
  - 17adbb0 Merge pull request #37533 from whiteinge/salt-api-504-timeouts
  - 63226ae Return a 504 response instead of 500 for Salt timeouts
- **PR** #37529: (*lorengordon*) Backport: PR 36736 to 2016.3 @ *2016-11-08T00:04:10Z*
  - **ISSUE** #36679: (*lorengordon*) Command `Import-Module ServerManager' failed with return code: 1 | refs: #36736
  - **PR** #36736: (*m03*) Fix issue 36679 win_servermanager error | refs: #37529
  - a9f03ee Merge pull request #37529 from lorengordon/bp-36736
  - 21c2664 Fix issue 36679 win_servermanager failure
- **PR** #37519: (*rallytime*) Update returner __virtual__() return messages for loader @ *2016-11-07T23:06:23Z*
  - **ISSUE** #37444: (*Tanoti*) Returning False from __virtual__ in a returner does not return expected error | refs: #37502 #37519
  - **PR** #37502: (*cachedout*) Log proper message on returners that cannot be loaded | refs: #37519
  - 19475aa Merge pull request #37519 from rallytime/returner-load-errors
  - fb261a3 Update returner __virtual__() return messages for loader

- **PR** #37527: (*rallytime*) Add syndic_id=None kwarg to save_minions funcs in returners @ *2016-11-07T23:04:03Z*
  - **ISSUE** #35016: (*pingangit*) TypeError: save_minions() got an unexpected keyword argument `syndic_id' | refs: #37527
  - fefdfab Merge pull request #37527 from rallytime/fix-35016
  - 2944b24 Add syndic_id=None kwarg to save_minions funcs in returners
- b77b6ba fix Lithium to 2015.5.0 (#37530)
  - **PR** #37530: (*gtmanfred*) fix Lithium to 2015.5.0
- **PR** #37514: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3 @ *2016-11-07T16:51:06Z*
  - **PR** #37482: (*rallytime*) [2015.8] Doc version updated to 2016.3.4
  - 7431648 Merge pull request #37514 from rallytime/merge-2016.3
  - 41166ae Merge branch `2015.8' into `2016.3'
  - c505a05 [2015.8] Doc version updated to 2016.3.4 (#37482)
- **PR** #37503: (*cachedout*) Catch loader error on returners without save_load @ *2016-11-07T09:33:57Z*
  - **ISSUE** #36713: (*Tanoti*) ExtraData: unpack(b) received extra data after upgrading to 2016.3.3 | refs: #37503
  - 2d924d0 Merge pull request #37503 from cachedout/issue_36713
  - 5f7f971 Catch loader error on returners without save_load
- **PR** #37499: (*cachedout*) Clarify docs on salt-key events @ *2016-11-07T09:33:20Z*
  - **ISSUE** #37448: (*alisson276*) In `salt/key' events there are acts that never happen | refs: #37499
  - d95bf59 Merge pull request #37499 from cachedout/key_docs_clarify
  - 2758e74 Clarify docs on salt-key events
- **PR** #37500: (*cachedout*) Remove unused flag @ *2016-11-07T09:33:04Z*
  - 1dd1408 Merge pull request #37500 from cachedout/remove_include_errors
  - 6c705b1 Remove unused flag
- **PR** #37502: (*cachedout*) Log proper message on returners that cannot be loaded | refs: #37519 @ *2016-11-07T09:32:45Z*
  - **ISSUE** #37444: (*Tanoti*) Returning False from __virtual__ in a returner does not return expected error | refs: #37502 #37519
  - 4b6f1ab Merge pull request #37502 from cachedout/issue_37444
  - 4c5ab05 Remove debugging
  - 17d01e4 Log proper message on returners that cannot be loaded
- **PR** #37494: (*sjorge*) Forgot to update os_family map in #37472 @ *2016-11-06T22:18:54Z*
  - **ISSUE** #37389: (*d101nelson*) Some core grains are inaccurate or incomplete for Solaris | refs: #37472
  - **PR** #37472: (*sjorge*) 2016.3 solaris grains improvements | refs: #37494 #37494
  - 2422daf Merge pull request #37494 from sjorge/2016.3-osfam_map
  - 96ba545 Forgot to update os_family map in #37472
- **PR** #37496: (*mcalmer*) fix status handling in sysv init scripts @ *2016-11-06T22:18:00Z*
  - 41bd8e3 Merge pull request #37496 from mcalmer/fix-status-handling-in-sysv-init-scripts

  - 1fb2c4d fix status handling in sysv init scripts
- **PR** #37497: (*terminalmage*) Update 2016.3.5 release notes with source_hash_name explanation @ *2016-11-06T22:17:40Z*
  - e741a77 Merge pull request #37497 from terminalmage/release_notes
  - c08038d Update 2016.3.5 release notes with source_hash_name explanation
- **PR** #37486: (*twangboy*) Add requirement for PowerShell 3 on Windows @ *2016-11-06T06:01:07Z*
  - f4426c2 Merge pull request #37486 from twangboy/fix_win_docs
  - 9e0631a Add docs denoting the requirement for at least PowerShell 3
- **PR** #37493: (*cachedout*) Add sdb support to minion and master configs @ *2016-11-06T06:00:18Z*
  - a1f355a Merge pull request #37493 from cachedout/minion_master_sdb
  - 9761a46 Add sdb support to minion and master configs
- **PR** #37452: (*rallytime*) file.line with mode=replace on an empty file should return False, not stacktrace @ *2016-11-06T01:55:11Z*
  - **ISSUE** #31135: (*jeffreyctang*) file.line mode=replace breaks on empty file. | refs: #37452
  - be93710 Merge pull request #37452 from rallytime/fix-31135
  - c792f76 Bump log level from debug to warning on empty file
  - 5f181cf file.line with mode=replace on an empty file should return False
  - 94a00c6 Write a unit test demonstrating stack trace in #31135
- **PR** #37469: (*terminalmage*) Rewrite file.extract_hash to improve its matching ability @ *2016-11-06T01:50:01Z*
  - **ISSUE** #37001: (*phil123456*) URGENT : archive.extracted does not work anymore | refs: #37081
  - **ISSUE** #29010: (*The-Loeki*) file.managed download failing checksum testing for Ubuntu initrd w/source_hash | refs: #37469
  - **PR** #37081: (*terminalmage*) Fix archive.extracted remote source_hash verification | refs: #37469 #37469
  - 129b038 Merge pull request #37469 from terminalmage/issue29010
  - a3f38e5 Update file.extract_hash unit tests
  - b26b528 Add the source_hash_name param to file.managed states
  - 52fe72d Rewrite file.extract_hash
- **PR** #37472: (*sjorge*) 2016.3 solaris grains improvements | refs: #37494 #37494 @ *2016-11-06T01:46:10Z*
  - **ISSUE** #37389: (*d101nelson*) Some core grains are inaccurate or incomplete for Solaris | refs: #37472
  - 9426b9d Merge pull request #37472 from sjorge/2016.3-solaris-grains
  - 2958f5c detect and properly handle OmniOS
  - 37c3a7f handle Oracle Solaris better
  - 69706d3 parse minorrelease if it has a / in it
  - d1cf4a0 improve regex for parsing /etc/release using files from Solaris 8 SPARC and Solaris 10
  - 88eddef some more cleanup for smartos
  - d3ff39f improve smartos os version grains
- **PR** #37478: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3 @ *2016-11-04T20:30:08Z*

  - **ISSUE** #37388: (*tyhunt99*) [2016.3.4] Refreshing of an s3 file server results in an exception. | refs: #37428
  - **ISSUE** #37286: (*terminalmage*) GitFS: mountpoints with trailing slashes cause all file paths in that repo to fail to be matched | refs: #37408
  - **ISSUE** #36849: (*skulikov*) file.managed and archive.extracted don't properly work for tgz remote files | refs: #37418
  - **PR** #37441: (*rallytime*) Back-port #37428 to 2015.8
  - **PR** #37428: (*cachedout*) Fix incorrect reference of __utils__ in salt.utils | refs: #37441
  - **PR** #37418: (*terminalmage*) Do not use compression in tornado httpclient requests
  - **PR** #37408: (*terminalmage*) Strip slashes from gitfs mountpoints
  - 4ba63ab Merge pull request #37478 from rallytime/merge-2016.3
  - 3483a44 Merge branch `2015.8' into `2016.3'
    * 35888c2 Merge pull request #37408 from terminalmage/issue37286
      · 4e4a057 Strip slashes from gitfs mountpoints
    * b6c57c6 Merge pull request #37418 from terminalmage/issue36849
      · 740bc54 Do not use compression in tornado httpclient requests
    * 7fba8aa Merge pull request #37441 from rallytime/bp-37428
      · 6fe3ef4 Fix incorrect reference of __utils__ in salt.utils
- 8aa101a Get release notes started for 2016.3.5 (#37485)
  - **PR** #37485: (*rallytime*) Get release notes started for 2016.3.5
- dfd9495 [2016.3] Doc version updated to 2016.3.4 (#37483)
  - **PR** #37483: (*rallytime*) [2016.3] Doc version updated to 2016.3.4
- **PR** #37121: (*nevins-b*) allow the file.recurse state to support saltenv @ *2016-11-04T05:59:28Z*
  - **ISSUE** #37123: (*nevins-b*) file.recurse state doesn't support pulling from other environments | refs: #37121
  - 580eca7 Merge pull request #37121 from nevins-b/2016.3
  - 99d2c36 making messaging in tests match new return
  - bc4b0e7 adding test for saltenv in file.recurse source url
  - 3315b67 fixing saltenv if not set in url
  - a9683cb allow the file.recurse state to support saltenv (salt://example/dir?saltenv=dev)
- **PR** #37426: (*jfindlay*) Wait for macOS to change system settings @ *2016-11-04T04:35:52Z*
  - **PR** #37351: (*jfindlay*) modules.mac_power: give macOS time to change setting | refs: #37426
  - 766b143 Merge pull request #37426 from jfindlay/mac_sleep
  - 43a8e19 modules.mac_power: wait for system to make change
  - feabca6 modules.mac_system: wait for system to make change
  - 0213eb9 utils.mac_utils: add confirm_updated
- **PR** #37438: (*DmitryKuzmenko*) Fix for #37238 salt hang on master restart | refs: #37602 @ *2016-11-04T04:10:51Z*
  - **ISSUE** #37238: (*cmclaughlin*) Restarting master causes minion to hang | refs: #37438 #37602
  - **ISSUE** #37018: (*tsaridas*) get events from python | refs: #37438 #37602

  - 9eab5c8 Merge pull request #37438 from DSRCorporation/bugs/37238_salt_hang_on_master_restart
  - f253d3c Auto reconnect *salt* to master if the connection was lost.
- **PR** #37440: (*rallytime*) Back-port #31207 to 2016.3 @ *2016-11-04T04:09:33Z*
  - **PR** #31207: (*thusoy*) Remove error logging of missing boto libraries | refs: #37440
  - 9aa7073 Merge pull request #37440 from rallytime/bp-31207
  - c71ae61 Remove error logging of missing boto libraries
- **PR** #37442: (*twangboy*) Create paths.d directory @ *2016-11-04T04:07:19Z*
  - edbfadc Merge pull request #37442 from twangboy/fix_osx_postinstall
  - 8091a30 Create paths.d directory
- **PR** #37445: (*twangboy*) Check for Server os before checking [DO NOT MERGE FORWARD] @ *2016-11-04T04:04:49Z*
  - afb1b3c Merge pull request #37445 from twangboy/fix_import_error_2016.3
  - c0d5ebd Check for Server os before checking
- **PR** #37446: (*twangboy*) Detect VC++ for Python on Win32 @ *2016-11-04T04:04:02Z*
  - 7a9f95a Merge pull request #37446 from twangboy/fix_build_32
  - 2de69f4 Detect VC for Python correctly on 32bit Windows
- **PR** #37447: (*rallytime*) Cast ip_protocol rule as a str() in boto_secgroup.present @ *2016-11-04T04:03:45Z*
  - **ISSUE** #36961: (*nullify005*) boto_secgroup assumes a string when checking ip_protocol validity when not `tcp|udp|all|-1` | refs: #37447
  - 651e0f7 Merge pull request #37447 from rallytime/fix-36961
  - 6b930ac Cast ip_protocol rule as a str() in boto_secgroup.present
- **PR** #37455: (*techhat*) Make api opts respect correct root_dir @ *2016-11-04T03:25:40Z*
  - **ISSUE** #36446: (*whiteinge*) Custom salt-api config problem | refs: #37455
  - **PR** #36386: (*xiaoanyunfei*) fix salt-api's default opts were covered by salt-master #35734 | refs: #37455
  - a51d944 Merge pull request #37455 from techhat/issue36446
  - 7eff90d Make api opts respect correct root_dir
- **PR** #37459: (*twangboy*) Fix error message when ConvertTo-Json not supported [DO NOT MERGE FORWARD] @ *2016-11-04T03:22:31Z*
  - 3591bf0 Merge pull request #37459 from twangboy/fix_dsc_json_msg_2016.3
  - 949b709 Use cmd.run_all instead of cmd.shell
- **PR** #37430: (*meaksh*) Including resolution parameters in the Zypper debug-solver call during a dry-run dist-upgrade (2016.3) @ *2016-11-03T14:35:46Z*
  - **ISSUE** #2016: (*seanchannel*) status.custom failing on any arguments
  - **PR** #37353: (*meaksh*) Including resolution parameters in the Zypper debug-solver call during a dry-run dist-upgrade | refs: #37430
  - 80a99c4 Merge pull request #37430 from meaksh/zypper-dist-upgrade-debug-solver-fix-2016.3
  - ffc596f Including resolver params for Zypper debug-solver
- 67cc7a7 Fix incorrect reference of __utils__ in salt.utils (#37428)

  - **ISSUE** #37388: (*tyhunt99*) [2016.3.4] Refreshing of an s3 file server results in an exception. | refs: #37428
  - **PR** #37428: (*cachedout*) Fix incorrect reference of __utils__ in salt.utils | refs: #37441
- **PR** #37419: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3 @ *2016-11-02T21:40:04Z*
  - **ISSUE** #33187: (*usbportnoy*) Deploy to jboss TypeError at boss7.py:469 | refs: #33190
  - **PR** #37392: (*rallytime*) Back-port #33190 to 2015.8
  - **PR** #33190: (*usbportnoy*) Fixes Type error in jboss state module when concatenating comments | refs: #37392
  - 7864f9b Merge pull request #37419 from rallytime/merge-2016.3
  - bce47c9 Merge branch `2015.8' into `2016.3'
    * 7b1d3b5 Merge pull request #37392 from rallytime/bp-33190
    * 4063bae catch None cases for comments in jboss7 state module
- d749567 Fix regression in output for Ctrl-c'ed CLI jobs (#37416)
  - **PR** #37416: (*terminalmage*) Fix regression in output for Ctrl-c'ed CLI jobs
- e9b4620 Add unit tests for cloning from snapshot (#37414)
  - **PR** #37414: (*pass-by-value*) Add unit tests for cloning from snapshot
  - **PR** #37350: (*pass-by-value*) Add handling for full and linked clone | refs: #37414
- **PR** #37404: (*cachedout*) Revert ``Bootstrap delay option for salt-cloud'' @ *2016-11-02T09:48:53Z*
  - **PR** #37401: (*cachedout*) Bootstrap delay option for salt-cloud | refs: #37404
  - ecd794a Merge pull request #37404 from saltstack/revert-37401-bootstrap_delay
  - e864de8 Revert ``Bootstrap delay option for salt-cloud''
- **PR** #37401: (*cachedout*) Bootstrap delay option for salt-cloud | refs: #37404 @ *2016-11-02T09:02:13Z*
  - 2eb44fb Merge pull request #37401 from cachedout/bootstrap_delay
  - 6e42b0e Bootstrap delay option for salt-cloud
- **PR** #37350: (*pass-by-value*) Add handling for full and linked clone | refs: #37414 @ *2016-11-02T08:02:29Z*
  - 9446e48 Merge pull request #37350 from pass-by-value/full_and_linked_clone_v1
  - d8b1c9c Add handling for full and linked clone and commit disk mode additions
- **PR** #37386: (*rallytime*) Fix win_useradd.chgroups return when cmd.run_all retcode != 0 @ *2016-11-02T06:34:12Z*
  - **ISSUE** #34841: (*Ch3LL*) Wrong return when using *user.chgroups* on windows | refs: #37386
  - c7f4d7f Merge pull request #37386 from rallytime/fix-34841
  - c70492a Fix win_useradd.chgroups return when cmd.run_all retcode != 0
- **PR** #37390: (*rallytime*) Don't insert __pub* keys into dnsmasq config file with set_config function @ *2016-11-02T06:31:53Z*
  - **ISSUE** #34263: (*vernondcole*) Use of dnsmasq.set_config injects unintentional text into the configuration file. | refs: #37390
  - 34b6c64 Merge pull request #37390 from rallytime/fix-34263
  - e082ff5 Fix failing test now that we're raising a CommandExecutionError

  - c6a3476 Filter out the __pub keys passed via **kwargs for dnsmasq.set_config
  - fd380c7 Add test case to reproduce dnsmasq.set_config failure in #34263
- **PR** #37391: (*rallytime*) Back-port #35287 to 2016.3 @ *2016-11-02T06:18:26Z*
  - **ISSUE** #35163: (*SolarisYan*) salt file.mkdir | refs: #35287 #35189
  - **PR** #35287: (*dere*) 2016.3 | refs: #37391
  - **PR** #35189: (*dere*) return value for file.mkdir instead of None | refs: #35287
  - 798b2ac Merge pull request #37391 from rallytime/bp-35287
  - 0e1ebea Simplify return value to ``True''.
  - 13022c5 return value for mkdir instead of None
- **PR** #37279: (*gtmanfred*) initialize super class of NamespacedDictWrapper @ *2016-11-01T15:12:49Z*
  - **ISSUE** #37264: (*junster1*) Parsing __grains__ with json.dumps in a module is returning an empty dict in 2016.3.3 | refs: #37279
  - 1a4833b Merge pull request #37279 from gtmanfred/2016.3
  - 597f346 initialize super class of NamespacedDictWrapper
- **PR** #37351: (*jfindlay*) modules.mac_power: give macOS time to change setting | refs: #37426 @ *2016-10-31T19:15:40Z*
  - 3511759 Merge pull request #37351 from jfindlay/mac_set
  - 0c58056 modules.mac_power: give macOS time to change setting
- **PR** #37340: (*cachedout*) SIGILL -> SIGKILL in process test @ *2016-10-31T08:50:10Z*
  - 25c987e Merge pull request #37340 from cachedout/ill_kill_3
  - a6b7417 SIGILL -> SIGKILL in process test
- **PR** #37306: (*DmitryKuzmenko*) Don't use os.wait() on subprocesses managed by *multiprocessing*. @ *2016-10-31T06:55:30Z*
  - **ISSUE** #35480: (*jelenak*) 200 processes of salt-master (2016.3.2) | refs: #37306
  - 7f16548 Merge pull request #37306 from DSRCorporation/bugs/35480_master_shutdown_no_process_error
  - b6937eb Don't use os.wait() on subprocesses managed by *multiprocessing*.
- **PR** #37314: (*rallytime*) Document the existence of placementgroup option in ec2 driver @ *2016-10-31T06:42:33Z*
  - **ISSUE** #34998: (*exowaucka*) placementgroup parameter for salt-cloud is undocumented | refs: #37314
  - bf8ba97 Merge pull request #37314 from rallytime/fix-34998
  - 39459ed Document the existence of placementgroup option in ec2 driver
- **PR** #37219: (*alex-zel*) Fix freeipa ldap groups @ *2016-10-28T04:33:37Z*
  - **ISSUE** #36148: (*alex-zel*) Eauth error with openLDAP groups | refs: #37219
  - e0baf4b Merge pull request #37219 from alex-zel/fix-freeipa-ldap-groups
  - b5b2e7e Remove trailing whitespaces
  - 32f906b Add support for FreeIPA

20.2.17 Salt 2016.3.6 Release Notes

Version 2016.3.6 is a bugfix release for *2016.3.0*.

Changes for v2016.3.5..v2016.3.6

Extended changelog courtesy of Todd Stansell (https://github.com/tjstansell/salt-changelogs):

Generated at: 2017-03-22T20:18:54Z

Statistics:

- Total Merges: **118**
- Total Issue references: **53**
- Total PR references: **168**

Changes:

- **PR** #39855: (*Foxlik*) Use regular expression instead of split when replacing authorized_keys @ *2017-03-22T18:28:32Z*
  - **ISSUE** #39854: (*Foxlik*) quoted space in authorized_keys confuses ssh.py | refs: #39855
  - c59ae9a Merge pull request #39855 from Foxlik/use_regex_to_compare_authorized_keys
  - d46845a Add newline at end of file
  - d4a3c8a Use regular expression instead of split when replacing authorized_keys
- **PR** #40221: (*rallytime*) Back-port #39179 to 2016.3 @ *2017-03-22T17:40:34Z*
  - **PR** #39179: (*mcalmer*) fix error parsing | refs: #40221
  - fd10430 Merge pull request #40221 from rallytime/bp-39179
  - 07dc2de fix error parsing
- **PR** #40206: (*cro*) Leave sign_pub_messages off by default. @ *2017-03-22T16:43:03Z*
  - **ISSUE** #40203: (*frogunder*) 2016.3.6. Minion don't connect to older master. | refs: #40206
  - a27a2cc Merge pull request #40206 from cro/sign_pub_take2
  - 01048de leave sign_pub_messages off on minion by default.
  - a82b005 Leave sign_pub_messages off by default.
- **PR** #40193: (*rallytime*) Back-port #40117 to 2016.3 @ *2017-03-22T16:42:21Z*
  - **PR** #40117: (*narendraingale2*) Fix force remove | refs: #40193
  - d1abb4c Merge pull request #40193 from rallytime/bp-40117
  - cf18579 More optimization.
  - 5a08266 Removed debug statemnt
  - f557f7c Added fix for issue 39393
  - bb62278 Reverting changes.
  - a9107cd Added if condition for broken link.
- **PR** #40196: (*twangboy*) Update dependencies for PyOpenSSL @ *2017-03-22T16:40:46Z*
  - 0f1ff4d Merge pull request #40196 from twangboy/win_fix_deps

  - 6761527 Update dependencies for PyOpenSSL
- **PR** #40184: (*terminalmage*) Link to minion start reactor example from FAQ. @ *2017-03-21T17:33:09Z*
  - b050151 Merge pull request #40184 from terminalmage/link-reactor-example
  - a42be82 Link to minion start reactor example from FAQ.
- **PR** #40182: (*terminalmage*) Add support for ``stopped'' state to dockerng's mod_watch @ *2017-03-21T15:40:29Z*
  - d4e6c58 Merge pull request #40182 from terminalmage/dockerng-mod_watch-stopped
  - 4629a26 Add support for ``stopped'' state to dockerng's mod_watch
- **PR** #40171: (*Ch3LL*) additional PRs/issues for 2016.3.6 release notes @ *2017-03-20T22:14:17Z*
  - a0b4082 Merge pull request #40171 from Ch3LL/2016.3.6_release
  - 9c6d8d8 additional PRs/issues for 2016.3.6 release notes
- **PR** #40120: (*sergeizv*) gce: Exclude GCENodeDriver objects from _expand_node result @ *2017-03-20T21:44:42Z*
  - 33ba782 Merge pull request #40120 from sergeizv/gce-expand-node-fix
  - 9d0fbe7 gce: Exclude GCENodeDriver objects from _expand_node result
- **PR** #40122: (*meaksh*) Adding ``pkg.install downloadonly=True'' support to yum/dnf execution module @ *2017-03-20T21:44:15Z*
  - 4884397 Merge pull request #40122 from meaksh/2016.3-yum-downloadonly-support
  - 067f3f7 Adding downloadonly support to yum/dnf module
- **PR** #40159: (*cro*) Turn on sign_pub_messages by default. @ *2017-03-20T21:00:49Z*
  - 60e1d4e Merge pull request #40159 from cro/sign_pub
  - e663b76 Fix small syntax error
  - 0a0f46f Turn on sign_pub_messages by default. Make sure messages with no `sig' are dropped with error when sign_pub_messages is True.
- **PR** #40123: (*twangboy*) Adds support for inet_pton in Windows to network util @ *2017-03-20T16:25:47Z*
  - 28e4fc1 Merge pull request #40123 from twangboy/win_fix_network
  - 06dfd55 Adds support for inet_pton in Windows to network util
- **PR** #40141: (*bobrik*) Use the first address if cannot connect to any @ *2017-03-20T15:06:57Z*
  - **ISSUE** #39995: (*frogunder*) Head of Develop - Multimaster error | refs: #40141
  - **ISSUE** #39118: (*bobrik*) Minion ipv6 option is not documented | refs: #39289
  - **PR** #39289: (*bobrik*) Autodetect IPv6 connectivity from minion to master | refs: #39766 #40141
  - 35ddb79 Merge pull request #40141 from bobrik/fallback-resolve
  - af1545d Use the first address if cannot connect to any
- **PR** #40059: (*terminalmage*) Fix traceback when virtualenv.managed is invoked with nonexistent user @ *2017-03-16T20:46:43Z*
  - 116201f Merge pull request #40059 from terminalmage/fix-virtualenv-traceback
  - e3cfd29 Fix traceback when virtualenv.managed is invoked with nonexistent user
- **PR** #40090: (*rallytime*) Back-port #40056 to 2016.3 @ *2017-03-16T19:42:58Z*
  - **PR** #40056: (*thatch45*) update mention bot blacklist | refs: #40090

  - a01b52b Merge pull request #40090 from rallytime/bp-40056
  - ae012db update mention bot blacklist
- **PR** #40057: (*cachedout*) More mentionbot blacklists @ *2017-03-16T18:10:11Z*
  - d1570bb Merge pull request #40057 from cachedout/ollie_blacklist
  - 0ac2e83 Merge branch `2016.3' into ollie_blacklist
- **PR** #40070: (*Ch3LL*) update 2016.3.6 release notes with additional PR's @ *2017-03-16T15:43:22Z*
  - d36bdb1 Merge pull request #40070 from Ch3LL/2016.3.6_release
  - a1f8b49 update 2016.3.6 release notes with additional PR's
- **PR** #40018: (*meaksh*) Allow overriding `timeout' and `gather_job_timeout' to `manage.up' runner call @ *2017-03-15T19:43:01Z*
  - 8dcffc7 Merge pull request #40018 from meaksh/2016.3-handling-timeouts-for-manage.up-runner
  - 9f5c3b7 Allow setting custom timeouts for `manage.up' and `manage.status'
  - 2102d9c Allow setting `timeout' and `gather_job_timeout' via kwargs
- **PR** #40038: (*velom*) correctly parse ``pkg_name===version'' from pip freeze @ *2017-03-15T19:30:03Z*
  - 22fc529 Merge pull request #40038 from velom/fix-pip-freeze-parsing
  - 3fae91d correctly parse ``pkg_name===version'' from pip freeze
- **PR** #40053: (*gtmanfred*) Update rh_ip.py @ *2017-03-15T18:57:32Z*
  - **ISSUE** #40036: (*oogali*) UnboundLocalError: local variable `ifcfg' referenced before assignment | refs: #40053
  - 3584f93 Merge pull request #40053 from saltstack/rh_ip_patch
  - 219947a Update rh_ip.py
- **PR** #40041: (*terminalmage*) Fix transposed lines in salt.utils.process @ *2017-03-15T17:58:24Z*
  - **ISSUE** #40011: (*tsaridas*) salt-minion does not shutdown properly 2016.11.3 rh6 | refs: #40041
  - 837432d Merge pull request #40041 from terminalmage/issue40011
  - 5b5d1b3 Fix transposed lines in salt.utils.process
- **PR** #40021: (*Ch3LL*) 2016.3.6 release notes with change log @ *2017-03-14T21:06:18Z*
  - ee7f3b1 Merge pull request #40021 from Ch3LL/2016.3.6_release
  - f3e7e4f Add 2016.3.6 Release Notes
- **PR** #40016: (*terminalmage*) Attempt to fix failing grains tests in 2016.3 @ *2017-03-14T18:34:32Z*
  - 26895b7 Merge pull request #40016 from terminalmage/fix-grains-test
  - 0ec81a4 Fixup a syntax error
  - 5d84b40 Attempt to fix failing grains tests in 2016.3
- **PR** #39980: (*vutny*) [2016.3] Allow using *bg* kwarg for *cmd.run* state function @ *2017-03-14T17:16:14Z*
  - 0c61d06 Merge pull request #39980 from vutny/cmd-run-state-bg
  - a81dc9d [2016.3] Allow using *bg* kwarg for *cmd.run* state function
- **PR** #39994: (*rallytime*) Add a versionadded tag for dockerng ulimits addition @ *2017-03-13T20:58:02Z*
  - **ISSUE** #39942: (*Foxlik*) Web Documentation not in sync with release 2016.11.3 | refs: #39994

  - b042484 Merge pull request #39994 from rallytime/ulimits-dockerng-version
  - 37bd800 Add a versionadded tag for dockerng ulimits addition
- **PR** #39988: (*terminalmage*) Add comment explaining change from #39973 @ *2017-03-13T18:37:29Z*
  - **PR** #39973: (*terminalmage*) Don't use docker.Client instance from context if missing attributes
  - e125c94 Merge pull request #39988 from terminalmage/dockerng-timeout
  - bd2519e Add comment explaining change from #39973
- **PR** #39973: (*terminalmage*) Don't use docker.Client instance from context if missing attributes @ *2017-03-11T14:57:50Z*
  - cd0336e Merge pull request #39973 from terminalmage/dockerng-timeout
  - 869416e Don't use docker.Client instance from context if missing attributes
- **PR** #39962: (*cachedout*) Disable mention bot delay on 2016.3 @ *2017-03-10T20:24:08Z*
  - 282c607 Merge pull request #39962 from cachedout/disable_mentionbot_delay_3
  - 7a638f2 Disable mention bot delay on 2016.3
    - 5592c68 More mentionbot blacklists
- **PR** #39937: (*cachedout*) Fix --non-gpg-checks in zypper module @ *2017-03-10T18:02:51Z*
  - 1e0c88a Merge pull request #39937 from cachedout/gpg_zypper
  - 13ed0d1 Fix --non-gpg-checks in zypper module
- **PR** #39929: (*terminalmage*) Scrap event-based approach for refreshing grains (2016.3 branch) @ *2017-03-09T22:03:16Z*
  - 4526fc6 Merge pull request #39929 from terminalmage/pr-39770-2016.3
  - cf0100d Scrap event-based approach for refreshing grains
- **PR** #39919: (*The-Loeki*) CIDR matching supports IPv6, update docs @ *2017-03-09T16:03:00Z*
  - **ISSUE** #22080: (*The-Loeki*) CIDR matching for IPv6 / improve IPv6 support in utils.network | refs: #39919
  - 111110c Merge pull request #39919 from The-Loeki/patch-1
  - 170cbad CIDR matching supports IPv6, update docs
- **PR** #39899: (*techhat*) Update cleanup function for azure @ *2017-03-08T23:28:33Z*
  - caf10e9 Merge pull request #39899 from techhat/cleanupdisks
  - baf4579 Update cleanup function for azure
- **PR** #39871: (*terminalmage*) Squelch warning for pygit2 import @ *2017-03-07T20:40:18Z*
  - fcf95f3 Merge pull request #39871 from terminalmage/squelch-import-warning
  - 2b2ec69 Squelch warning for pygit2 import
- **PR** #39794: (*cachedout*) Clean up errors which might be thrown when the monitor socket shuts down @ *2017-03-04T16:12:37Z*
  - f223fa8 Merge pull request #39794 from cachedout/clean_monitor_socket_shutdown
  - 2e683e7 Clean up errors which might be thrown when the monitor socket shuts down
- **PR** #39819: (*terminalmage*) Improve the Top File matching docs @ *2017-03-04T16:06:40Z*
  - 4002dc1 Merge pull request #39819 from terminalmage/top-file-matching-docs

  - 7178e77 Improve the Top File matching docs
- **PR** #39820: (*ni3mm4nd*) Add missing apostrophe in Beacons topic documentation @ *2017-03-04T16:05:29Z*
  - c08aaeb Merge pull request #39820 from ni3mm4nd/beacons_topic_doc_typo
  - 804b120 Add missing apostrophe
- **PR** #39826: (*cachedout*) Add group func to yubikey auth @ *2017-03-04T16:02:14Z*
  - cbd2a4e Merge pull request #39826 from cachedout/yubikey_fix
  - 6125eff Add group func to yubikey auth
- **PR** #39624: (*drawsmcgraw*) Address issue 39622 @ *2017-03-03T15:59:04Z*
  - **ISSUE** #39622: (*drawsmcgraw*) boto_vpc.create_subnet does not properly assign tags | refs: #39624
  - f575ef4 Merge pull request #39624 from drawsmcgraw/39622
  - 13da50b Fix indention lint errors
  - 5450263 Address issue 39622
- **PR** #39796: (*cachedout*) Stop the process manager when it no longer has processes to manage @ *2017-03-02T23:03:13Z*
  - **ISSUE** #39119: (*frogunder*) Head of 2016.3 - Salt-Master uses 90 seconds to restart | refs: #39796
  - 1f3619c Merge pull request #39796 from cachedout/master_shutdown
  - e31d46c Stop the process manager when it no longer has processes to manage
- **PR** #39791: (*gtmanfred*) load runners if role is master @ *2017-03-02T19:43:41Z*
  - **ISSUE** #39333: (*jagguli*) Not Available error - Scheduling custom runner functions | refs: #39791
  - **ISSUE** #38514: (*githubcdr*) Unable to schedule runners | refs: #39791
  - 53341cf Merge pull request #39791 from gtmanfred/2016.3
  - 3ab4f84 load runners if role is master
- **PR** #39784: (*sergeizv*) Fix 39782 @ *2017-03-02T16:08:51Z*
  - **ISSUE** #39782: (*sergeizv*) salt-cloud show_instance action fails on EC2 instances | refs: #39784
  - **ISSUE** #33162: (*jfindlay*) Key error with salt.utils.cloud.cache_node and EC2 | refs: #33164 #39784
  - **PR** #33164: (*jfindlay*) cloud.clouds.ec2: cache each named node | refs: #39784 #39784
  - c234c25 Merge pull request #39784 from sergeizv/fix-39782
  - b71c3fe Revert ``cloud.clouds.ec2: cache each named node (#33164)''
- **PR** #39766: (*rallytime*) Restore ipv6 connectivity and ``master: <ip>:<port>'' support @ *2017-03-02T02:55:55Z*
  - **ISSUE** #39336: (*GevatterGaul*) salt-minion fails with IPv6 | refs: #39766
  - **ISSUE** #39118: (*bobrik*) Minion ipv6 option is not documented | refs: #39289
  - **PR** #39289: (*bobrik*) Autodetect IPv6 connectivity from minion to master | refs: #39766 #40141
  - **PR** #25021: (*GideonRed*) Introduce ip:port minion config | refs: #39766
  - 4ee59be Merge pull request #39766 from rallytime/fix-ipv6-connection
  - 65b2396 Restore ipv6 connectivity and ``master: <ip>:<port>'' support
- **PR** #39761: (*cachedout*) Properly display error in jboss7 state @ *2017-03-01T18:43:23Z*

  - **ISSUE** #33187: (*usbportnoy*) Deploy to jboss TypeError at boss7.py:469 | refs: #39170 #39761
  - a24da31 Merge pull request #39761 from cachedout/issue_33187
  - c2df29e Properly display error in jboss7 state
- **PR** #39728: (*rallytime*) [2016.3] Bump latest release version to 2016.11.3 @ *2017-02-28T18:07:44Z*
  - 0888bc3 Merge pull request #39728 from rallytime/update-release-ver-2016.3
  - c9bc8af [2016.3] Bump latest release version to 2016.11.3
- **PR** #39619: (*terminalmage*) Add a function to simply refresh the grains @ *2017-02-28T00:20:27Z*
  - b52dbee Merge pull request #39619 from terminalmage/zd1207
  - c7dfb49 Fix mocking for grains refresh
  - 7e0ced3 Properly hand proxy minions
  - 692c456 Add a function to simply refresh the grains
- **PR** #39487: (*bobrik*) Document default permission modes for file module @ *2017-02-24T23:49:00Z*
  - **ISSUE** #39482: (*bobrik*) file.managed and file mode don't mention default mode | refs: #39487
  - 3f8b5e6 Merge pull request #39487 from bobrik/mode-docs
  - 41ef69b Document default permission modes for file module
- **PR** #39641: (*smarsching*) Return runner return code in a way compatible with check_state_result @ *2017-02-24T23:07:11Z*
  - **ISSUE** #39169: (*blueyed*) Using batch-mode with *salt.state* in orchestration runner considers all minions to have failed | refs: #39641 #39641
  - f7389bf Merge pull request #39641 from smarsching/issue-39169-2016.3
  - 88c2d9a Fix return data structure for runner (issue #39169).
- **PR** #39633: (*terminalmage*) Fix misspelled argument in salt.modules.systemd.disable() @ *2017-02-24T18:21:36Z*
  - fc970b6 Merge pull request #39633 from terminalmage/fix-systemd-typo
  - ca54541 Add missing unit test for disable func
  - 17109e1 Fix misspelled argument in salt.modules.systemd.disable()
- **PR** #39613: (*terminalmage*) Fix inaccurate documentation @ *2017-02-24T06:07:35Z*
  - 53e78d6 Merge pull request #39613 from terminalmage/fix-docs
  - 9342eda Fix inaccurate documentation
- **PR** #39600: (*vutny*) state.file: drop non-relevant examples for *source_hash* parameter @ *2017-02-23T16:55:27Z*
  - 4e2b852 Merge pull request #39600 from vutny/state-file-docs
  - 9b0427c state.file: drop non-relevant examples for *source_hash* parameter
- **PR** #39584: (*cachedout*) A note in the docs about mentionbot @ *2017-02-23T15:12:13Z*
  - ed83420 Merge pull request #39584 from cachedout/mentionbot_docs
  - 652044b A note in the docs about mentionbot
- **PR** #39583: (*cachedout*) Add empty blacklist to mention bot @ *2017-02-23T02:22:57Z*
  - d3e50b4 Merge pull request #39583 from cachedout/mentionbot_blacklist
  - 62491c9 Add empty blacklist to mention bot

- **PR** #39579: (*rallytime*) [2016.3] Pylint: Remove unused import @ *2017-02-22T23:46:33Z*
  - 8352e6b Merge pull request #39579 from rallytime/fix-lint
  - 65889e1 [2016.3] Pylint: Remove unused import
- **PR** #39578: (*cachedout*) Add mention-bot configuration @ *2017-02-22T23:39:24Z*
  - 43dba32 Merge pull request #39578 from cachedout/2016.3
  - 344499e Add mention-bot configuration
- **PR** #39542: (*twangboy*) Gate ssh_known_hosts state against Windows @ *2017-02-22T20:16:41Z*
  - 8f7a0f9 Merge pull request #39542 from twangboy/gate_ssh_known_hosts
  - c90a52e Remove expensive check
  - 6d645ca Add __virtual__ function
- **PR** #39289: (*bobrik*) Autodetect IPv6 connectivity from minion to master | refs: #39766 #40141 @ *2017-02-22T19:05:32Z*
  - **ISSUE** #39118: (*bobrik*) Minion ipv6 option is not documented | refs: #39289
  - c109658 Merge pull request #39289 from bobrik/autodetect-ipv6
  - 2761a1b Move new kwargs to the end of argument list
  - 0df6b92 Narrow down connection exception to socket.error
  - e8a2cc0 Do no try to connect to salt master in syndic config test
  - af95786 Properly log address that failed to resolve or pass connection check
  - 9a34fbe Actually connect to master instead of checking route availability
  - c494839 Avoid bare exceptions in dns_check
  - 29f3766 Rewrite dns_check to try to connect to address
  - 55965ce Autodetect IPv6 connectivity from minion to master
- **PR** #39569: (*s0undt3ch*) Don't use our own six dictionary fixes in this branch @ *2017-02-22T18:59:49Z*
  - 3fb928b Merge pull request #39569 from s0undt3ch/2016.3
  - 49da135 Don't use our own six dictionary fixes in this branch
- **PR** #39508: (*dincamihai*) Openscap @ *2017-02-22T18:36:36Z*
  - 91e3319 Merge pull request #39508 from dincamihai/openscap
  - 9fedb84 Always return oscap's stderr
  - 0ecde2c Include oscap returncode in response
- **PR** #39562: (*terminalmage*) Add ulimits to dockerng state/exec module @ *2017-02-22T16:31:49Z*
  - **ISSUE** #30802: (*kjelle*) Missing ulimits on docker.running / dockerng.running | refs: #39562
  - fbe2194 Merge pull request #39562 from terminalmage/issue30802
  - c503740 Add ulimits to dockerng state/exec module
  - da42040 Try the docker-py 2.0 client name first
- 01d4a84 dockerng.get_client_args: Fix path for endpoint config for some versions of docker-py (#39544)
  - **PR** #39544: (*terminalmage*) dockerng.get_client_args: Fix path for endpoint config for some versions of docker-py

- **PR** #39498: (*terminalmage*) Resubmit PR #39483 against 2016.3 branch @ *2017-02-20T19:35:33Z*
  - dff35b5 Merge pull request #39498 from terminalmage/pr-39483
  - 20b097a dockerng: compare sets instead of lists of security_opt
- **PR** #39497: (*terminalmage*) Two dockerng compatibility fixes @ *2017-02-19T17:43:36Z*
  - 6418e72 Merge pull request #39497 from terminalmage/docker-compat-fixes
  - cbd0270 docker: make docker-exec the default execution driver
  - a6a17d5 Handle docker-py 2.0's new host_config path
- **PR** #39423: (*dincamihai*) Openscap module @ *2017-02-17T18:31:04Z*
  - 9c4292f Merge pull request #39423 from dincamihai/openscap
  - 9d13422 OpenSCAP module
- **PR** #39464: (*gtmanfred*) skip false values from preferred_ip @ *2017-02-16T22:48:32Z*
  - **ISSUE** #39444: (*clem-compilatio*) salt-cloud - IPv6 and IPv4 private_ips - preferred_ip sends False to is_public_ip | refs: #39464
  - 7dd2502 Merge pull request #39464 from gtmanfred/2016.3
  - f829d6f skip false values from preferred_ip
- **PR** #39460: (*cachedout*) Fix mocks in win_disim tests @ *2017-02-16T19:27:48Z*
  - db359ff Merge pull request #39460 from cachedout/win_dism_test_fix
  - e652a45 Fix mocks in win_disim tests
- **PR** #39426: (*morganwillcock*) win_dism: Return failure when package path does not exist @ *2017-02-16T00:09:22Z*
  - 9dbfba9 Merge pull request #39426 from morganwillcock/dism
  - a7d5118 Return failure when package path does not exist
- **PR** #39431: (*UtahDave*) Fix grains.setval performance @ *2017-02-15T23:56:30Z*
  - 5616270 Merge pull request #39431 from UtahDave/fix_grains.setval_performance
  - 391bbec add docs
  - 709c197 allow sync_grains to be disabled on grains.setval
- **PR** #39405: (*rallytime*) Update :depends: docs for boto states and modules @ *2017-02-15T17:32:08Z*
  - **ISSUE** #39304: (*Auha*) boto_s3_bucket documentation dependency clarification | refs: #39405
  - 239e16e Merge pull request #39405 from rallytime/fix-39304
  - bd1fe03 Update :depends: docs for boto states and modules
- **PR** #39411: (*rallytime*) Update external_cache docs with other configuration options @ *2017-02-15T17:30:40Z*
  - **ISSUE** #38762: (*oz123*) Configuration information for custom returners | refs: #39411
  - 415102f Merge pull request #39411 from rallytime/fix-38762
  - e13febe Update external_cache docs with other configuration options
- 7e1803b Update docs on upstream EPEL7 pygit2/libgit2 issues (#39421)
  - **PR** #39421: (*terminalmage*) Update docs on upstream EPEL7 pygit2/libgit2 issues
- 4ff13ac salt.fileserver.roots: Fix regression in symlink_list (#39409)

  - **PR** #39409: (*terminalmage*) salt.fileserver.roots: Fix regression in symlink_list
  - **PR** #39337: (*terminalmage*) Don't re-walk the roots fileserver in symlink_list() | refs: #39409
- **PR** #39362: (*dincamihai*) Add cp.push test @ *2017-02-14T18:42:11Z*
  - 8b8ab8e Merge pull request #39362 from dincamihai/cp-push-test-2016.3
  - 91383c5 Add cp.push test
- **PR** #39380: (*joe-niland*) Quote numeric user names so pwd.getpwnam handles them properly @ *2017-02-14T18:33:33Z*
  - 4b726f9 Merge pull request #39380 from joe-niland/quote-numeric-usernames
  - c2edfdd Quote numeric user names so pwd.getpwnam handles them properly
- **PR** #39400: (*meaksh*) Prevents `OSError' exception in case certain job cache path doesn't exist @ *2017-02-14T18:27:04Z*
  - 1116d32 Merge pull request #39400 from meaksh/2016.3-fix-local-cache-issue
  - e7e559e Prevents `OSError' exception in case path doesn't exist
- **PR** #39300: (*terminalmage*) Replace more usage of str.format in the loader @ *2017-02-13T19:01:19Z*
  - **PR** #39227: (*terminalmage*) Loader optimzation | refs: #39300
  - 6c854da Merge pull request #39300 from terminalmage/loader-optimization
  - d3e5d15 Replace more usage of str.format in the loader
- **PR** #39337: (*terminalmage*) Don't re-walk the roots fileserver in symlink_list() | refs: #39409 @ *2017-02-13T18:41:17Z*
  - 5286b5f Merge pull request #39337 from terminalmage/issue34428
  - a7d2135 Don't re-walk the roots fileserver in symlink_list()
- **PR** #39339: (*cro*) Add link to external pillar documentation for clarification. @ *2017-02-13T18:40:13Z*
  - ce781de Merge pull request #39339 from cro/pillar_filetree_doc
  - 410810c Clarification on external pillar usage.
- fa30143 Document the upstream RedHat bug with their pygit2 package (#39316)
  - **PR** #39316: (*terminalmage*) Document the upstream RedHat bug with their pygit2 package
- **PR** #39313: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3 @ *2017-02-10T16:23:23Z*
  - **PR** #39296: (*sergeizv*) Whitespace fix in docs Makefile
  - **PR** #39295: (*sergeizv*) Fix typo
  - **PR** #39294: (*sergeizv*) Fix link in proxyminion guide
  - **PR** #39293: (*sergeizv*) Grammar fix
  - 9de559f Merge pull request #39313 from rallytime/merge-2016.3
  - 0b8dddf Merge branch `2015.8' into `2016.3'
  - fc551bc Merge pull request #39293 from sergeizv/grammar-fix
    * 70f2b58 Rewrap paragraph
    * e6ab517 Grammar fix
  - 8a1b456 Merge pull request #39295 from sergeizv/typo-fix

        * 5d9f36d Fix typo
    - cfaafec Merge pull request #39296 from sergeizv/whitespace-fix

        * 04bde6e Fix link in proxyminion guide
- dd3ca0e Fix #38595 - Unexpected error log from redis retuner in master's log (#39299)
    - **ISSUE** #38595: (*yue9944882*) Redis ext job cache occurred error | refs: #38610 #38610
    - **PR** #39299: (*rallytime*) Back-port #38610 to 2016.3
    - **PR** #38610: (*yue9944882*) Fix #38595 - Unexpected error log from redis retuner in master's log | refs: #39299
- **PR** #39297: (*cro*) Add doc to recommend pgjsonb for master job caches @ *2017-02-09T22:49:59Z*
    - f16027d Merge pull request #39297 from cro/pg_returner_docs
    - 28bac64 Typo
    - 19fedcd Add doc to recommend pgjsonb for master job caches
- **PR** #39286: (*terminalmage*) Allow minion/CLI saltenv/pillarenv to override master when compiling pillar @ *2017-02-09T21:22:46Z*
    - 77e50ed Merge pull request #39286 from terminalmage/fix-pillarenv-precedence
    - 3cb9833 Allow minion/CLI saltenv/pillarenv to override master when compiling pillar
- **PR** #39221: (*lvg01*) Fix bug 39220 @ *2017-02-09T18:12:29Z*
    - **ISSUE** #39220: (*lvg01*) state file.line skips leading spaces in content with mode:ensure and indent:False | refs: #39221 #39221 #39221 #39221
    - 5244041 Merge pull request #39221 from lvg01/fix-bug-39220
    - e8a41d6 Removes to early content stripping (stripping is already done when needed with ident:true), fixes #39220
    - a4b169e Fixed wrong logic, fixes #39220
- 5a27207 Add warning for Dulwich removal (#39280)
    - **ISSUE** #36913: (*terminalmage*) Support custom refspecs in GitFS | refs: #39210
    - **PR** #39280: (*terminalmage*) Add warning for Dulwich removal
    - **PR** #39210: (*terminalmage*) salt.utils.gitfs: remove dulwich support, make refspecs configurable | refs: #39280
- 1b9217d Update jsonschema tests to reflect change in jsonschema 2.6.0 (#39260)
    - **PR** #39260: (*terminalmage*) Update jsonschema tests to reflect change in jsonschema 2.6.0
- c1d16cc Better handling of enabled/disabled arguments in pkgrepo.managed (#39251)
    - **ISSUE** #33536: (*murzick*) pkgrepo.managed does not disable a yum repo with ``disabled: True'' | refs: #35055
    - **PR** #39251: (*terminalmage*) Better handling of enabled/disabled arguments in pkgrepo.managed
    - **PR** #35055: (*galet*) #33536 pkgrepo.managed does not disable a yum repo with ``disabled: True'' | refs: #39251

- **PR** #39227: (*terminalmage*) Loader optimzation | refs: #39300 @ *2017-02-08T19:38:21Z*
  - 8e88f71 Merge pull request #39227 from terminalmage/loader-optimization
  - c750662 Loader optimzation
- **PR** #39228: (*gtmanfred*) default to utf8 encoding if not specified @ *2017-02-08T19:36:57Z*
  - **ISSUE** #38856: (*fhaynes*) salt-cloud throws an exception when ec2 does not return encoding | refs: #39228
  - bc89b29 Merge pull request #39228 from gtmanfred/2016.3
  - afee047 default to utf8 encoding if not specified
- **PR** #39231: (*terminalmage*) Add clarification for jenkins execution module @ *2017-02-08T19:34:45Z*
  - d9b0671 Merge pull request #39231 from terminalmage/clarify-jenkins-depends
  - ad1b125 Add clarification for jenkins execution module
- **PR** #39232: (*terminalmage*) Avoid recursion in s3/svn ext_pillars @ *2017-02-08T19:33:28Z*
  - ddcff89 Merge pull request #39232 from terminalmage/issue21342
  - c88896c Avoid recursion in s3/svn ext_pillars
- ef4e437 Fix the win_ip_test failures (#39230)
  - **ISSUE** #38697: (*fboismenu*) On Windows, ip.get_all_interfaces returns at most 2 DNS/WINS Servers | refs: #38793
  - **PR** #39230: (*rallytime*) Fix the win_ip_test failures
  - **PR** #38793: (*fboismenu*) Fix for #38697 | refs: #39197 #39230
- **PR** #39199: (*rallytime*) Back-port #39170 to 2016.3 @ *2017-02-07T16:19:32Z*
  - **ISSUE** #33187: (*usbportnoy*) Deploy to jboss TypeError at boss7.py:469 | refs: #39170 #39761
  - **PR** #39170: (*grep4linux*) Added missing source_hash_name argument in get_managed function | refs: #39199
  - df5f934 Merge pull request #39199 from rallytime/bp-39170
  - c129905 Added missing source_hash_name argument in get_managed function Additional fix to #33187 Customer was still seeing errors, this should now work. Tested with 2015.8.13 and 2016.11.2
- **PR** #39206: (*cachedout*) Ignore empty dicts in highstate outputter @ *2017-02-07T16:11:36Z*
  - **ISSUE** #37174: (*mikeadamz*) The State execution failed to record the order in which all states were executed spam while running pkg.upgrade from orchestration runner | refs: #39206
  - 2621c11 Merge pull request #39206 from cachedout/issue_issue_37174
  - be31e05 Ignore empty dicts in highstate outputter
- **PR** #39209: (*terminalmage*) Sort the return list from the fileserver.envs runner @ *2017-02-07T16:07:08Z*
  - dd44045 Merge pull request #39209 from terminalmage/sorted-envs
  - e6dda4a Sort the return list from the fileserver.envs runner
- 7bed687 [2016.3] Pylint fix (#39202)
  - **PR** #39202: (*rallytime*) [2016.3] Pylint fix
- **PR** #39197: (*cachedout*) Pr 38793 @ *2017-02-06T19:23:12Z*
  - **ISSUE** #38697: (*fboismenu*) On Windows, ip.get_all_interfaces returns at most 2 DNS/WINS Servers | refs: #38793

  - **PR** #38793: (*fboismenu*) Fix for #38697 | refs: #39197 #39230
  - ab76054 Merge pull request #39197 from cachedout/pr-38793
  - f3d35fb Lint fixes
  - 624f25b Fix for #38697
- **PR** #39166: (*Ch3LL*) fix boto ec2 module create_image doc @ *2017-02-06T18:27:17Z*
  - fa45cbc Merge pull request #39166 from Ch3LL/fix_boto_ec2_docs
  - 90af696 fix boto ec2 module create_image doc
- **PR** #39173: (*rallytime*) Restore ``Salt Community'' doc section @ *2017-02-06T18:19:11Z*
  - **PR** #30770: (*jacobhammons*) Doc restructuring, organization, and cleanup | refs: #39173
  - **PR** #10792: (*cachedout*) Documentation overhaul | refs: #39173
  - a40cb46 Merge pull request #39173 from rallytime/restore-community-docs
  - 5aeddf4 Restore ``Salt Community'' doc section
- 9de08af Apply fix from #38705 to 2016.3 branch (#39077)
  - **ISSUE** #38704: (*nasenbaer13*) Archive extracted fails when another state run is queued | refs: #38705
  - **PR** #39077: (*terminalmage*) Apply fix from #38705 to 2016.3 branch
  - **PR** #38705: (*nasenbaer13*) Fix for #38704 archive extracted and dockerio states
- da3053e update vmware getting started doc (#39146)
  - **PR** #39146: (*gtmanfred*) update vmware getting started doc
- e78ca0f Fixing a weird edge case when using salt syndics and targetting via pillar. Without this fix the master of masters ends up in an infinite loop since the data returned from the minions is differently structured than if a sync was not in use. (#39145)
  - **PR** #39145: (*garethgreenaway*) [2016.3] Fix when targeting via pillar with Salt syndic
- **PR** #38804: (*alexbleotu*) Second attempt to fix prepending of root_dir to paths @ *2017-02-02T16:10:37Z*
  - **ISSUE** #2016: (*seanchannel*) status.custom failing on any arguments
  - **ISSUE** #3: (*thatch45*) libvirt module
  - **ISSUE** #1: (*thatch45*) Enable regex on the salt cli
  - cd8077a Merge pull request #38804 from alexbleotu/root_dir_`fix-2016`_.3-gh
  - b3bdd3b Add missing whiteline
  - c7715ac Merge pull request #3 from cro/ab_rootdirfix
    * e8cbafa When running testsuite, salt.syspaths.ROOT_DIR is often empty.
  - b12dd44 Merge pull request #1 from cro/ab_rootdirfix
    * bffc537 Remove extra if statements (rstrip will check for the presence anyway).
  - 97521b3 Second attempt to fix prepending of root_dir to paths
- 6ffeda3 Clarify ipv6 option for minion and interface for master, closes #39118 (#39131)
  - **ISSUE** #39118: (*bobrik*) Minion ipv6 option is not documented | refs: #39289
  - **PR** #39131: (*bobrik*) Clarify ipv6 option for minion and interface for master, closes #39118
- 646b9ea Don't abort pillar.get with merge=True if default is None (#39116)

  - **PR** #39116: (*terminalmage*) Don't abort pillar.get with merge=True if default is None
- **PR** #39091: (*terminalmage*) Run test_valid_docs in batches @ *2017-02-01T19:09:05Z*
  - cc9b69b Merge pull request #39091 from terminalmage/update-test-valid-docs
  - d76f038 add debug logging for batch vars
  - b4afea2 Don't fail test if data is empty
  - b3a5d54 Account for trimmed value in `salt -d' output
  - 909916c Run test_valid_docs in batches
- bcee3d1 Move fileclient tests to tests/integration/fileserver/fileclient_test.py (#39081)
  - **PR** #39081: (*terminalmage*) Move fileclient tests to tests/integration/fileserver/fileclient_test.py
- 122422b Bump openstack deprecation notice to Oxygen (#39067)
  - **PR** #39067: (*rallytime*) Bump openstack deprecation notice to Oxygen
- **PR** #39047: (*rallytime*) [2016.3] Merge forward from 2015.8 to 2016.3 @ *2017-01-30T23:48:14Z*
  - **PR** #39046: (*rallytime*) Add 2015.8.14 release notes file
  - **PR** #39037: (*rallytime*) Update 2015.8.13 release notes
  - a24af5a Merge pull request #39047 from rallytime/merge-2016.3
  - b732a1f Merge branch `2015.8' into `2016.3'
  - 56ccae6 Add 2015.8.14 release notes file (#39046)
  - 5943fe6 Update 2015.8.13 release notes (#39037)
- fef1b11 Add 2016.3.6 release notes file (#39045)
  - **PR** #39045: (*rallytime*) Add 2016.3.6 release notes file

  - 0146562 Call correct function for resetting a VM
- **PR** #38883: (*techhat*) Don't require text_out path to exist @ *2017-01-23T18:20:42Z*
  - **PR** #38867: (*mchugh19*) Touch deploy.sh before use | refs: #38883
  - **PR** #32026: (*techhat*) Don't require the decode_out file to already exist | refs: #38883
  - c3fbfcd Merge pull request #38883 from techhat/dontrequire
  - 67bc4d6 Don't require text_out path to exist
- **PR** #38851: (*terminalmage*) Support docker-py 2.0 in dockerng @ *2017-01-23T16:48:12Z*
  - 6430a45 Merge pull request #38851 from terminalmage/docker-py-2.0
  - 3c061b2 Support docker-py 2.0 in dockerng
- **PR** #38844: (*cachedout*) Fix memory leak in HTTP client @ *2017-01-20T20:59:14Z*
  - ac8008d Merge pull request #38844 from cachedout/http_memory_leak
  - c46bf85 Fix memory leak in HTTP client
- **PR** #38823: (*gtmanfred*) pass pillar to compound matcher in match module @ *2017-01-20T19:19:09Z*
  - **ISSUE** #38798: (*ripta*) *match.compound* fails to match when pillar data is used | refs: #38823
  - dfe6dfe Merge pull request #38823 from gtmanfred/2016.3
  - f0a71e8 pass pillar to compound matcher in match module

20.2.18 Salt 2016.3.7 Release Notes

Version 2016.3.7 is a bugfix release for *2016.3.0*.

Changes for v2016.3.6..v2016.3.7

Security Fix

CVE-2017-12791 Maliciously crafted minion IDs can cause unwanted directory traversals on the Salt-master

Correct a flaw in minion id validation which could allow certain minions to authenticate to a master despite not having the correct credentials. To exploit the vulnerability, an attacker must create a salt-minion with an ID containing characters that will cause a directory traversal. Credit for discovering the security flaw goes to: Vernhk@qq.com

20.2.19 Salt 2016.3.8 Release Notes

Version 2016.3.8 is a bugfix release for *2016.3.0*.

Changes for v2016.3.7..v2016.3.8

Security Fix

CVE-2017-14695 Directory traversal vulnerability in minion id validation in SaltStack. Allows remote minions with incorrect credentials to authenticate to a master via a crafted minion ID. Credit for discovering the security flaw goes to: Julian Brost (julian@0x4a42.net)

CVE-2017-14696 Remote Denial of Service with a specially crafted authentication request. Credit for discovering the security flaw goes to: Julian Brost (julian@0x4a42.net)

20.2.20 Salt 2016.3.9 Release Notes

Version 2016.3.9 is a bugfix release for *2016.3.0*.

Changes for v2016.3.7..v2016.3.9

New master configuration option *allow_minion_key_revoke*, defaults to True. This option controls whether a minion can request that the master revoke its key. When True, a minion can request a key revocation and the master will comply. If it is False, the key will not be revoked by the msater.

New master configuration option *require_minion_sign_messages* This requires that minions cryptographically sign the messages they publish to the master. If minions are not signing, then log this information at loglevel `INFO' and drop the message without acting on it.

New master configuration option *drop_messages_signature_fail* Drop messages from minions when their signatures do not validate. Note that when this option is False but *require_minion_sign_messages* is True minions MUST sign their messages but the validity of their signatures is ignored.

New minion configuration option *minion_sign_messages* Causes the minion to cryptographically sign the payload of messages it places on the event bus for the master. The payloads are signed with the minion's private key so the master can verify the signature with its public key.

20.2.21 Salt 2015.8.0 Release Notes - Codename Beryllium

2015.8.0 Detailed Change List

Extended changelog courtesy of Todd Stansell (https://github.com/tjstansell/salt-changelogs)

Generated at: 2015-09-09T18:15:43Z

This list includes all pull requests merged into the 2015.8 branch between the forking of the branch from develop and the release of 2015.8.0.

Statistics:

- Total Merges: **682**
- Total Issue references: **342**
- Total PR references: **866**

Pull Requests:

- #26993: (*whiteinge*) Backport #26975
- #26970: (*cachedout*) Revert ``better path query parsing in fileserver''

- #26980: (*terminalmage*) Use human-readable cachedirs for gitfs-backed winrepo
- #26969: (*TheBigBear*) URL of salt windows downloads has changed
- #26968: (*TheBigBear*) URL of salt windows downloads has changed
- #26958: (*s0undt3ch*) Bradthurber bootstrap command line help doc update
- #26949: (*rallytime*) Back-port #25148 to 2015.8
- #26914: (*cro*) Add salt-proxy script and manpage to setup.py so they will get installed.
- #26909: (*terminalmage*) Don't try to git clone from /tmp on Windows
- #26910: (*s0undt3ch*) Sometimes the event system is just too fast
- #26905: (*s0undt3ch*) Exit the loop if run_once is true
- #26897: (*msteed*) spm file hash part deux
- #26900: (*s0undt3ch*) If no tag is passed, don't actually subscribe to anything.
- #26880: (*s0undt3ch*) Restore backwards compatibility to *salt.utils.event*
- #26896: (*msteed*) spm remove: use pkgfiles to calculate file hashes
- #26891: (*jtand*) Fixed an unboundlocalerror
- #26892: (*cachedout*) Make the testing ioloop the current one
- #26886: (*jtand*) Gets the azure version correctly on python-azure 1.0.0
- #26870: (*rallytime*) Back-port #26834 to 2015.8
- #26865: (*dmurphy18*) Fix apt preferences for apts, repos for pbuilder building for Debian
- #26873: (*terminalmage*) Properly handle getting local config values in older git versions
- #26869: (*rallytime*) Fix provider --> driver change for salt-cloud lxc
- #26858: (*terminalmage*) Fix a couple version checks for git state and execution module
- #26853: (*UtahDave*) Fix salt-cloud on windows
- #26852: (*basepi*) [2015.8] Only reference msgpack if it imported successfully
- #26835: (*terminalmage*) Backport #26572 to 2015.8
- #26836: (*jacobhammons*) Added rst source for salt-proxy man page, added build and copy lines ...
- #26818: (*terminalmage*) Support empty repositories in git.latest
- #26819: (*rallytime*) Make sure we're calling _validate_name in the correct place in 2015.8 Linode driver
- #26841: (*l2ol33rt*) Fix reference before assignment in sqs engine
- #26822: (*terminalmage*) Add some missing imports for masterless winrepo
- #26831: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- #26826: (*techhat*) Pass a package name to unregister_file()
- #26757: (*cachedout*) Fix various filehandle leaks
- #26816: (*gtmanfred*) rev defaults to HEAD
- #26801: (*jacobhammons*) Added doc for dockerng minion configuration options
- #26808: (*anlutro*) Fix git init argument formatting
- #26807: (*terminalmage*) Move salt.utils.itersplit() to salt.utils.itertools.split()

- #26796: (*jacobhammons*) Add doc for __states__
- #26764: (*sjorge*) salt.utils.is_proxy() is no longer always true on SunOS/Illumos/SmartOS
- #26772: (*sjorge*) pull in smartos `virt' module from develop
- #26726: (*terminalmage*) Redact HTTPS Basic Auth in states/funcs which deal with git remotes
- #26769: (*terminalmage*) Use --track to set tracking branch on older git versions
- #26765: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- #26761: (*sjorge*) fix SPM paths on smartos/illumos esky
- #26751: (*terminalmage*) Fixes for masterless winrepo
- #26745: (*rallytime*) Make sure pyrax configs are in place before checking for deps
- #26746: (*rallytime*) Make sure nova configs are set before checking for dependencies
- #26750: (*basepi*) [2015.8] Add __utils__ to state modules
- #26752: (*cro*) Fix typo in some diagram labels
- #26747: (*basepi*) [2015.8] Add __states__ to state modules, for cross-calling states
- #26744: (*basepi*) [2015.8] Fix issue from #26717
- #26737: (*dmurphy18*) Fix to allow for package naming other than just salt
- #26742: (*rallytime*) Only warn about vsphere deprecation if vsphere is configured
- #26733: (*sjorge*) Refactor of smartos_vmadm module
- #26735: (*s0undt3ch*) Add *.hg* and *.cvs* to spm_build_exclude
- #26720: (*UtahDave*) Updates for winrepo in 2015.8 to support jinja, while maintaining backwards compat
- #26719: (*jodv*) Backport 26532 to 2015.8
- #26721: (*rallytime*) Linode Driver Cleanup
- #26707: (*techhat*) Add top_level_dir to FORMULAs
- #26723: (*s0undt3ch*) Handle SPM paths in the setup script
- #26717: (*basepi*) [2015.8] Revert loader changes from #26645
- #26712: (*techhat*) Move SPM paths around
- #26680: (*TheBigBear*) add more python libs info in `--versions-report'
- #26716: (*terminalmage*) Allow git identity to be a list
- #26691: (*garethgreenaway*) Fixes to ipset module for 2015.8
- #26701: (*kev009*) Ignore the first element of kern.disks split, which is the sysctl name (new disks grain)
- #26678: (*terminalmage*) Restructure git.latest rewrite to work better when following HEAD
- #26679: (*rallytime*) Back-port #26661 to 2015.8
- #26684: (*techhat*) Add reactor formulas to spm
- #26682: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- #26671: (*rallytime*) Warn users if cloud driver dependencies are missing.
- #26674: (*rallytime*) Back-port #26583 to 2015.8
- #26670: (*techhat*) Set up SPM to install -conf packages

- #26657: (*jfindlay*) top file compilation fixes
- #26659: (*TheBigBear*) minor doc edits - spelling
- #26654: (*jfindlay*) merge **`#26650`_**
- #26567: (*jtand*) Added git version check to git module
- #26649: (*twangboy*) Fixed Lint for real in win_repo.py
- #26608: (*jacobhammons*) 2015.8.0 release notes and doc/conf.py updates
- #26646: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- #26645: (*rallytime*) Back-port #26390 to 2015.8
- #26642: (*twangboy*) Added function to render winrepo Jinja
- #26625: (*twangboy*) Correctly detect packages with no version, docs
- #26575: (*msteed*) Update spm for integration into raas
- #26635: (*cro*) Don't report windows as a proxy.
- #26622: (*rallytime*) [2015.8] Also add -Z to script args for cloud tests
- #26619: (*rallytime*) Apply cloud test fixes from 2015.5 to 2015.8
- #26603: (*terminalmage*) Fixes for git.latest, git module integration tests, etc.
- #26577: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- #26534: (*cachedout*) Bump required Tornado version to 4.2.1
- #26566: (*cachedout*) Don't stacktrace trying to publish without a master
- #26541: (*terminalmage*) Make winrepo execution module use the same code as the runner
- #26530: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- #26570: (*cachedout*) Fix haproxy docs to be valid
- #26562: (*cachedout*) Fix suprious error message with systemd-detect
- #26557: (*jfindlay*) add docs to #26550
- #26544: (*nmadhok*) Do not raise KeyError when calling avail_images if VM/template is in disconnected state
- #26501: (*terminalmage*) Update git_pillar docs, add git.list_worktrees function
- #26521: (*terminalmage*) Work around upstream git bug when cloning repo as root
- #26518: (*krak3n*) Fix for **`#25492`_**
- #26514: (*evverx*) Unmask a runtime masked services too
- #26529: (*mnalt*) bugfix: fix service.enable for missing rc.conf
- #26516: (*techhat*) Move more path operations into SPM loader
- #26533: (*cachedout*) Fix too aggressive even init check
- #26522: (*cro*) Do not load package provider if its not a proxy
- #26531: (*cachedout*) Fix failing event tests and modify event init
- #26433: (*cro*) Add support for default proxy config options, change default location of proxy config and log to /etc/salt/proxy and /var/log/proxy
- #26504: (*nmadhok*) [Backport] Adding ability to specify the virtual hardware version when creating VM

- #26517: (*cachedout*) Better fix for opensuse tornado httpclient
- #26479: (*rallytime*) Don't allow VMs with duplicate names to be created in EC2/AWS
- #26488: (*cachedout*) Don't pass unsupported kwarg to tornado
- #26451: (*terminalmage*) Use `rpm -qa' instead of repoquery to list installed packages
- #26491: (*jacobhammons*) doc site css fix for tiny fonts that appeared in code or pre tags in ...
- #26442: (*rallytime*) Hide API Key from debug logs for Linode Driver
- #26441: (*rallytime*) Refactor a few linode functions to be useful with salt-cloud command
- #26485: (*s0undt3ch*) One more missed typo
- #26495: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- #26492: (*cachedout*) Fix schedule test error on py26
- #26489: (*cachedout*) Fixing more tarfile tests on py2.6
- #26475: (*cachedout*) Better object checking on asyncreq cleanup
- #26477: (*cachedout*) Fix integration.modules.git.GitModuleTest.test_archive on py26
- #26469: (*jtand*) --annotate and --message aren't valid options in older versions of git.
- #26439: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- #26464: (*rallytime*) Back-port #26456 to 2015.8
- #26463: (*rallytime*) Back-port #26455 to 2015.8
- #26449: (*s0undt3ch*) The CLI options are not meant to include underscores.
- #26270: (*sjorge*) salt.modules.network now supports SmartOS and SunOS < Solaris 11
- #26436: (*TheBigBear*) minor edits
- #26410: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- #26427: (*anlutro*) git.latest with no rev: fix concatenation error (NoneType and str)
- #26307: (*cachedout*) Fix bug in top file ordering
- #26428: (*cro*) Update docs to reflect new pillar structure
- #26429: (*cachedout*) Add release note regarding tcp transport on freebsd
- #26418: (*driskell*) Fix forward-merged caching from 2015.5 into 2015.8 to be compatible with the new match_func
- #26252: (*DmitryKuzmenko*) Issues/24048 http client 2015.8
- #26413: (*evverx*) Fix service.{start,restart,reload,force-reload} for masked services
- #26393: (*dmurphy18*) Added option parameters to make_repo to allow for configuration settings
- #26422: (*TheBigBear*) no dots in SLS filename __AND__ any directories (incl git repos)
- #26323: (*0xf10e*) Fix Credentials used in *glance* Exec Module
- #26341: (*terminalmage*) Rewrite git state and execution modules
- #26419: (*terminalmage*) Only use pygit2.errors if it exists
- #26423: (*eliasp*) doc - Correct function name for peer configuration
- #26401: (*cachedout*) Adapt proxy minion to tornado (w/lint)

- #26400: (*rallytime*) Back-port #26318 to 2015.8
- #26397: (*s0undt3ch*) A single *isinstance()* check for all types is enough
- #26385: (*gtmanfred*) don't require volume endpoint in nova driver
- #26287: (*techhat*) Break out SPM components into loaders
- #26384: (*TheBigBear*) Fix shell quoting for cmd.run
- #26391: (*rallytime*) Back-port #26367 to 2015.8
- #26383: (*rallytime*) Allow the creation of a VM without a profile
- #26375: (*s0undt3ch*) [2015.8] Schema DictItem required attribute fixes
- #26363: (*garethgreenaway*) Fixes to mount state 2015.8
- #26347: (*0xf10e*) Load `pkgng' as `pkg' on FreeBSD 9 when *providers:pkg* == `pkgng'
- #26361: (*TronPaul*) sign security token
- #26346: (*TronPaul*) Fix s3 using IAM credentials
- #26331: (*mnalt*) fix bug in sysrc to allow for empty rc variables
- #26334: (*rallytime*) Call salt.utils.cloud.bootstrap in GCE Driver provisioning
- #26308: (*dmurphy18*) Support for environment overrides building packages
- #26279: (*TheScriptSage*) Merge changes for pull`#26083`_ and pull`#25632`_ into 2015.8
- #26224: (*cachedout*) Cleanup of a few cases to move to salt.utils.fopen
- #26260: (*nmadhok*) Correct spelling of integration in docs
- #26226: (*rallytime*) Fix **`#25463`_**
- #26248: (*nmadhok*) Initial commit of unit tests for vmware cloud driver
- #26228: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- #26244: (*nmadhok*) Backport additions to VMware cloud driver from develop to 2015.8 branch
- #26235: (*sjorge*) salt.utils.is_smartos_zone, inverse of is_smartos_globalzone
- #26221: (*sjorge*) SmartOS grain fixes
- #26218: (*terminalmage*) Add warning about file.recurse unicode errors with vim swap files.
- #26214: (*rallytime*) Back-port #24878 to 2015.8
- #26211: (*techhat*) Move SPM to its own directory
- #26197: (*TronPaul*) Fix GitFS when whitelisting base
- #26200: (*anlutro*) Make it possible to run salt-cloud as current user
- #26201: (*kev009*) Avoid VBOX storage emulation bugs in FreeBSD disks grain
- #26188: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- #26194: (*basepi*) Allow virtual grains to be generated even if virt-what is not available
- #26176: (*rallytime*) Back-port #26165 to 2015.8
- #26169: (*terminalmage*) Fix attribute error in gitfs' find_file functions
- #26170: (*nmadhok*) [Backport] Make sure variable is a dictionary before popping something from it.
- #26143: (*nmadhok*) VMware cloud driver fixes [forward port from 2015.5 into 2015.8]

- #26173: (*jacobhammons*) Updates to cloud docs for the provider > driver change
- #26125: (*evverx*) Use timedatectl set-timezone to tzsetting if available
- #26145: (*sjorge*) smartos_imgadm cleanup
- #26148: (*terminalmage*) Refactor winrepo support
- #26128: (*sjorge*) imgadm.avail should return multiple results
- #26109: (*jfindlay*) fix quote indent
- #26089: (*anlutro*) User state/module: fix coercing of None into string ``None'' in GECOS
- #26081: (*cachedout*) Move invocation routine up
- #26086: (*rallytime*) Back-port #26019 to 2015.8
- #26087: (*rallytime*) Back-port #26059 to 2015.8
- #26052: (*jtand*) Rh_ip fix
- #26078: (*cachedout*) Fix missing key in error return
- #26074: (*basepi*) [2015.8] Re-apply #25358 in 2015.8
- #26069: (*jfindlay*) fix win_firewall.delete_rule
- #26066: (*s0undt3ch*) [2015.8] Update to latest bootstrap stable release v2015.06.08
- #26049: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- #26026: (*anlutro*) Fix httpasswd result false positive in test mode
- #26037: (*rallytime*) Back-port #25489 to 2015.8
- #26004: (*techhat*) Allow updating a single SPM repo at a time
- #26012: (*cachedout*) Merge kwargs into opts for tcp client
- #26007: (*anlutro*) file.managed: wrap os.remove in if isfile, don't remove on success
- #26009: (*terminalmage*) Add winrepo and dockerng information to 2015.8.0 release notes
- #26006: (*basepi*) Revert #25727 in favor of #25645
- #26001: (*cachedout*) Fix failing tests
- #25978: (*anlutro*) Correct service state changes in test mode
- #25982: (*sjorge*) salt.modules.smartos_* limit to global zone only
- #25989: (*rallytime*) Back-port #25832 to 2015.8
- #25988: (*cachedout*) Move #25642 to 2015.8
- #25999: (*s0undt3ch*) Include subschema defaults
- #25997: (*s0undt3ch*) Allow getting a defaults dictionary from schema defaults
- #25979: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- #25902: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- #25956: (*anlutro*) Fix user argument to cron functions
- #25946: (*sjorge*) Fix for salt.utils.decorators under esky
- #25957: (*anlutro*) Remove temporary file after file.managed with checkcmd
- #25874: (*rallytime*) Back-port #25668 to 2015.8

- #25929: (*sjorge*) salt.module.pkgin's __virtual__() should not return None if pkg_info is not present
- #25952: (*garethgreenaway*) Log when event.fire and event.fire_master fail 2015.8
- #25944: (*sjorge*) Smartos libcrypto nonesky fix
- #25906: (*dmurphy18*) Cherry-pick of pkgbuild changes from develop branch
- #25925: (*sjorge*) Create default log location in smartos esky buildscript
- #25928: (*cachedout*) Fix stacktrace for non-existant states
- #25922: (*jacksontj*) Correct max_wait -> max_auth_wait in MultiMinion
- #25907: (*rallytime*) Back-port #25892 to 2015.8
- #25910: (*terminalmage*) Pass osarch to check_32()
- #25849: (*basepi*) Repress template error for GPG renderer (can't seek an OrderedDict)
- #25868: (*rallytime*) Back-port #25404 to 2015.8
- #25896: (*cachedout*) Lint
- #25876: (*jacksontj*) Fixes for 2015.8
- #25867: (*rallytime*) Back-port #25370 to 2015.8
- #25845: (*jacobhammons*) updated versionadded
- #25836: (*jacksontj*) Keep track of SyncWrapper's IOLoop usage
- #25859: (*0xf10e*) warn_until(Carbon,...) instead of Boron
- #25505: (*0xf10e*) Glance state module for 2015.8 ``Beryllium''
- #25843: (*jtand*) Fixed a lint error in parsers.py
- #25835: (*techhat*) spm update_repo doesn't always require arguments
- #25837: (*jacobhammons*) regenerated man pages
- #25830: (*sjorge*) Loading of libcrypto on smartos esky fixed
- #25808: (*jfindlay*) add highstate opts to config/__init__.py, update docs
- #25820: (*sjorge*) Prerequisite to fix the smartos libcrypto loading
- #25781: (*anlutro*) Fix iptables.build_rule
- #25764: (*gtmanfred*) allow use of cloudnetworks in ssh_interface
- #25736: (*jfindlay*) insert explicit formatter number
- #25742: (*rallytime*) Back-port #25731 to 2015.8
- #25741: (*rallytime*) Back-port #25727 to 2015.8
- #25712: (*cachedout*) Fix outputter for state.apply
- #25698: (*rallytime*) Back-port #25659 to 2015.8
- #25690: (*anlutro*) Fix highstate duration alignment (again)
- #25684: (*davidjb*) Fix doc around Include/Exclude for states
- #25549: (*techhat*) Switch Scaleway to salt.utils.cloud.bootstrap()
- #25667: (*jfindlay*) add 2015.8.0rc2 autogenerated changelog
- #25653: (*anlutro*) Properly align highstate duration sum

- #25663: (*rallytime*) Back-port #25638 to 2015.8
- #25639: (*terminalmage*) Don't do pre-flight check on git_pillar if it is not configured
- #25587: (*cachedout*) Fix prereq in salt.state
- #25628: (*anlutro*) Highstate output: show duration in seconds instead of milliseconds when appropriate
- #25631: (*basepi*) Remove trailing whitespace
- #25627: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- #25626: (*basepi*) Fix the highstate outputter if `duration' is not present
- #25601: (*terminalmage*) Fix error message when local bin pkg path is not absolute
- #25595: (*terminalmage*) Bring git_pillar up to feature parity with gitfs
- #25619: (*cachedout*) Lint stateconf changes
- #25578: (*davidjb*) Allow parent relative includes in state files
- #25610: (*s0undt3ch*) [2015.8] Update the bootstrap script to latest release v2015.07.22
- #25599: (*jfindlay*) fix transport settings in #25596
- #25596: (*jfindlay*) Tcp test
- #25591: (*garethgreenaway*) Return data for scheduled jobs in 2015.8 default to True.
- #25588: (*basepi*) Fix some of the retcode work from #23105
- #25583: (*jtand*) Fixed lint error where pprint wasn't imported.
- #25572: (*rallytime*) Back-port #25570 to 2015.8
- #25575: (*rallytime*) Make Sure Scaleway driver works with deprecation paths
- #25564: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- #25566: (*techhat*) Fix download process for SPM repo updates
- #25553: (*techhat*) Switch SoftLayer to salt.utils.cloud.bootstrap()
- #25552: (*techhat*) Update pricing for SoftlayerHW
- #25547: (*techhat*) Switch Parallels to salt.utils.cloud.bootstrap()
- #25548: (*techhat*) Switch Proxmox to salt.utils.cloud.bootstrap()
- #25543: (*techhat*) Switch GCE to salt.utils.cloud.bootstrap()
- #25546: (*techhat*) Switch CloudStack to salt.utils.cloud.bootstrap()
- #25558: (*cachedout*) Lint config_test
- #25515: (*s0undt3ch*) salt.utils.schema fixes
- #25514: (*garethgreenaway*) fixes to schedule.add documentation in 2015.8
- #25508: (*s0undt3ch*) [2015.8] Update bootstrap script to latest stable release, v2015.07.17
- #25501: (*basepi*) Add optional job end time to the local_cache returner
- #25491: (*s0undt3ch*) Let's call it for what it is!
- #25462: (*rallytime*) Wrap is_profile_configrured calls in try/except block
- #25439: (*rallytime*) Reduce digital_ocean API call frequency
- #25451: (*s0undt3ch*) Salt-SSH Scan roster bugfixes (And Py3 support)

- #25449: (*ruzarowski*) Exclude dotfiles and directories from minion key lists (Fixes `#25448`_)
- #25421: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- #25412: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- #25415: (*bechtoldt*) [docs] declare YAML as code block
- #25407: (*rallytime*) Back-port #23236 to 2015.8
- #25409: (*rallytime*) Back-port #24422 to 2015.8
- #25394: (*rallytime*) Back-port #25355 to 2015.8
- #25393: (*rallytime*) Back-port #25289 to 2015.8
- #25387: (*cachedout*) Lint #25319
- #25319: (*ruzarowski*) [cloud:EC2] Move SourceDest logic to _update_enis and add alias for delete_interface_on_terminate
- #25310: (*anlutro*) Add an ``is list'' test to the jinja environment
- #25264: (*ruzarowski*) Fix AttributeError in fileserver update_opts
- #25372: (*rallytime*) Don't stacktrace when provisioning instances with softlayer* drivers
- #25315: (*ruzarowski*) [cloud:EC2] Move handling of AssociatePublicIpAddress to associate_eip/allocate_new_eip logic depending on value type
- #25312: (*ruzarowski*) [cloud:EC2] Introduce eni Name property to set name tag value after its creation
- #25311: (*ruzarowski*) [cloud:EC2] Add ability to attach an existing eni
- #25280: (*rallytime*) Remove deprecation warnings for Beryllium
- #25329: (*twangboy*) Fixed some documentation errors
- #25300: (*s0undt3ch*) Fix ordering issue & Added requirements support
- #25283: (*jfindlay*) ensure ret is always defined
- #25252: (*jfindlay*) make args optional with default values in win_firewall.delete_rule
- #25257: (*notpeter*) Document SourceDestCheck added in #25242.
- #25298: (*twangboy*) Continue if profile not found
- #25296: (*twangboy*) Fixed file.comment for windows
- #25254: (*rallytime*) Change versionadded/changed references from Beryllium to 2015.8.0
- #25285: (*thusoy*) Remove error logging of missing victorops keys
- #25266: (*ruzarowski*) cloud: EC2 eni property SourceDestCheck is a AttributeBooleanValue
- #25216: (*jfindlay*) replace shell code with native python code
- #25278: (*rallytime*) Don't require size for all cloud drivers when checking profile configs
- #25271: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- #25263: (*techhat*) Allow non-standard HTTP requests on tornado
- #25253: (*s0undt3ch*) Remove the deprecation warning. The driver has been renamed.
- #25248: (*techhat*) Do not resize while iterating
- #25244: (*rallytime*) Remove parted deprecations and fix failing tests
- #25242: (*ruzarowski*) Make SourceDestCheck flag available to network interface definition

- #25226: (*nmadhok*) Backporting fix for issue `#25223`_ on 2015.8 branch
- #25234: (*krak3n*) Fix: Bug in boto_asg state argument passing to boto_asg module
- #25222: (*rallytime*) Back-port #25219 to 2015.8
- #25188: (*rallytime*) Use linode status descriptions instead of ints when logging status to CLI
- #25203: (*s0undt3ch*) Added DictConfig with tests & More tests
- #25189: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- #25184: (*rallytime*) Back-port #25126 to 2015.8
- #25172: (*s0undt3ch*) Comment out imports while the YAML and RST rendering is not in-place.
- #25158: (*s0undt3ch*) Comment out not implemented code
- #25145: (*s0undt3ch*) Implement *oneOf*, *anyOf*, *allOf* and *not* with unit tests
- #25140: (*s0undt3ch*) Make the detection code work under Python 3.4
- #25131: (*s0undt3ch*) Array support in salt.utils.config
- #25130: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8

The 2015.8.0 feature release of Salt contains several major new features. As usual the release notes are not exhaustive and primarily include the most notable additions and improvements. Hundreds of bugs have been fixed and many modules have been substantially updated and added.

New SaltStack Installation Repositories

SaltStack now provides installation repositories for several platforms, with more to come. See the following links for instructions:

- *Red Hat / CentOS 5, 6, 7*
- *Debian 8*
- *Windows*
- *FreeBSD*

Send Event on State Completion

A `fire_event` global state keyword argument was added that allows any state to send an event upon completion. Useful for custom progress bars and checking in on long state runs. See *fire_event*.

ZeroMQ socket monitoring

If `zmq_monitor` is enabled, log all ZMQ events for socket monitoring purposes. Verbose, but useful.

SPM (Salt Package Manager)

Allows Salt formulas to be packaged for ease of deployment. See *spm*.

Note: The spm executable was not included in the Debian or Ubuntu packages for the 2015.8.0 or the 2015.8.1 releases. This executable will be included in an upcoming release. As a workaround, copy the SPM script from the salt library installation into `/usr/local/bin` or your local equivalent.

Specify a Single Environment for Top Files

A new `default_top` option was added to load the state top file from a single, specific environment, rather than merging top data across all environments. Additionally, new `top_file_merge_strategy` and `env_order` options were added for more control over top file merging. See *The Top File*.

Tornado TCP Transport

Implemented a pure-TCP transport, in addition to ZeroMQ and RAET. The new transport uses Tornado, which allows Salt to use a standardized set of libraries for asynchronous behavior, which should greatly improve reliability and performance.

Note: Tornado is considered expiremental in this release. The following known issues were being investigated at the time of release:

- TCP tests show performance degredation over time (issue 26051)
- TCP transport stacktrace on windows minion: Future exception was never retrieved (issue 25718)
- [freebsd] TCP transport not working in 2015.8.0rc3 (issue 26364)

Proxy Minion Enhancements

Proxy Minions have undergone a significant overhaul in 2015.8, see Proxy Minion Enhancements.

Engines

Salt engines are long-running, external processes that leverage Salt. See *Salt Engines*.

Core Changes

- Add system version info to `versions_report`, which appears in both `salt --versions-report` and `salt '*' test.versions_report`. Also added is an alias `test.versions` to `test.versions_report`. (issue 21906)
- Add colorized console logging support. This is activated by using `%(colorlevel)s`, `%(colorname)s`, `%(colorprocess)s`, `%(colormsg)s` in `log_fmt_console` in the config file for any of `salt-master`, `salt-minion`, and `salt-cloud`.

Git Pillar

The git external pillar has been rewritten to bring it up to feature parity with `gitfs`. Support for pygit2 has been added, bringing with it the ability to access authenticated repositories.

Using the new features will require updates to the git ext_pillar configuration, further details can be found in the *pillar.git_pillar* docs.

Salt Cloud Improvements

- Pricing data from several cloud providers (GCE, DigitalOcean, SoftLayer_HW, EC2)
- All cloud providers now use standardized bootstrapping code.
- Modified the Linode Salt Cloud driver to use Linode's native API instead of depending on apache-libcloud or linode-python.

Salt Cloud Changes

- Changed the default behavior of `rename_on_destroy` to be set to `True` in the EC2 and AWS drivers.
- Changed the default behavior of the EC2 and AWS drivers to always check for duplicate names of VMs before trying to create a new VM. Will now throw an error similarly to other salt-cloud drivers when trying to create a VM of the same name, even if the VM is in the `terminated` state.
- When querying for VMs in `digital_ocean.py`, the number of VMs to include in a page was changed from 20 (default) to 200 to reduce the number of API calls to Digital Ocean.Ocean.

State and Execution Module Improvements

- New and improved Docker state and execution modules (*`state`* and *`execution module`*).

Git State and Execution Modules Rewritten

The git state and execution modules have gone through an extensive overhaul.

Changes in the `git.latest` State

- The `branch` argument has been added, allowing for a custom branch name to be used in the local checkout maintained by the *`git.latest`* state. This can be helpful in avoiding ambiguous refs in the local checkout when a tag is used as the `rev` argument. If no `branch` is specified, then the state uses the value of `rev` as the branch name.
- The `always_fetch` argument no longer has any effect, and will be removed in a future release. The state now detects whether or not a fetch is needed based on comparisons made between the local and remote repositories.
- The `force_fetch` argument has been added to force a fetch if the fetch is not a fast-forward (for instance, if someone has done a reset and force-pushed to the remote repository).
- The `remote_name` argument has been deprecated and renamed to `remote`.
- The `force` argument has been deprecated and renamed to `force_clone` to reduce ambiguity with the other ``force'' arguments.
- Using SHA1 hashes (full or shortened) in the `rev` argument is now properly supported.
- Non-fast-forward merges are now detected before the repository is updated, and the state will not update the repository if the change is not a fast-forward. Non-fast-forward updates must be overridden with the `force_reset` argument. If `force_reset` is set to `True`, the state will only reset the repository if it

cannot be fast-forwarded. This is in contrast to the earlier behavior, in which a hard-reset would be performed every time the state was run if `force_reset` was set to `True`.

- A `git pull` is no longer performed by this state, dropped in favor of a fetch-and-merge (or fetch-and-reset) workflow.

`git.config_unset` state added

This state allows for configuration values (or entire keys) to be unset. See *here* for more information and example SLS.

git.config State Renamed to `git.config_set`

To reduce confusion after the addition of *git.config_unset*, the git.config state has been renamed to *git.config_set*. The old config.get name will still work for a couple releases, allowing time for SLS files to be updated.

In addition, this state now supports managing multivar git configuration values. See *here* for more information and example SLS.

Initial Support for Git Worktrees in Execution Module

Several functions have been added to the execution module to manage worktrees (a feature new to Git 2.5.0). State support does not exist yet, but will follow soon.

New Functions in Git Execution Module

- `git.config_get_regexp`
- *git.config_unset*
- *git.is_worktree*
- *git.list_branches*
- *git.list_tags*
- *git.list_worktrees*
- *git.merge_base*
- *git.merge_tree*
- *git.rev_parse*
- *git.version*
- *git.worktree_rm*
- *git.worktree_add*
- *git.worktree_prune*

Changes to Functions in Git Execution Module

git.add

- `--verbose` is now implied when running the `git add` command, to provide a list of the files added in the return data.

git.archive

- Now returns `True` when the `git archive` command was successful, and otherwise raises an error.
- The `overwrite` argument has been added to prevent an existing archive from being overwritten by this function.
- The `fmt` argument has been deprecated and renamed to `format`.
- Trailing slash no longer implied in `prefix` argument, must be included if this argument is passed.

git.checkout

- The `rev` argument is now optional when using `-b` or `-B` in `opts`, allowing for a branch to be created (or reset) using `HEAD` as the starting point.

git.clone

- The `name` argument has been added to specify the name of the directory in which to clone the repository. If this option is specified, then the clone will be made within the directory specified by the `cwd`, instead of at that location.
- The `repository` argument has been deprecated and renamed to `url`.

git.config_get

- The `setting_name` argument has been deprecated and renamed to `key`.
- The `global` argument has been added, to query the global git configuration
- The `all` argument has been added to return a list of all values for the specified key, allowing for all values in a multivar to be returned.
- The `cwd` argument is now optional if `global` is set to `True`

git.config_set

- The value(s) of the key being set are now returned
- The `setting_name` argument has been deprecated and renamed to `key`.
- The `setting_value` argument has been deprecated and renamed to `value`.
- The `is_global` argument has been deprecated and renamed to `global`.
- The `multivar` argument has been added to specify a list of values to set for the specified key. The `value` argument is not compatible with `multivar`.

- The `add` argument has been added to add a value to a key (this essentially just adds an `--add` to the `git config` command that is run to set the value).

git.fetch

- The `force` argument has been added to force the fetch when it is not a fast-forward. This could have been achieved in previous Salt versions by including `--force` in the `opts` argument, this argument is just for convenience and to match the usage of other functions with `force` arguments.
- The `refspecs` argument has been added to allow for one or more refspecs to be provided which override the one(s) specified by the **remote.remote_name.fetch** git configuration option.

git.ls_remote

- The `repository` argument has been deprecated and renamed to `remote`.
- The `branch` argument has been deprecated and renamed to `ref`.
- The `opts` argument has been added to allow for additional CLI options to be passed to the `git ls-remote` command.

git.merge

- The `branch` argument has been deprecated and renamed to `rev`.

git.status

- Return data has been changed from a list of lists to a dictionary containing lists of files in the modified, added, deleted, and untracked states.

git.submodule

- Added the `command` argument to allow for operations other than `update` to be run on submodules, and deprecated the `init` argument. To do a submodule update with `init=True` moving forward, use `command=update opts='--init'`.
- OpenStack Glance API V2 execution module
- Amazon VPC state module
- RallyDev execution module
- BambooHR execution module
- Stormpath execution, state modules
- Remove unused argument `timeout` in jboss7.status.
- Deprecate `enabled` argument in `pkgrepo.managed` in favor of `disabled`.
- Archive module changes: In the `archive.tar` and `archive.cmd_unzip` module functions, remove the arbitrary prefixing of the options string with `-`. An options string beginning with a `--long-option`, would have uncharacteristically needed its first `-` removed under the former scheme. Also, tar will parse its options differently if short options are used with or without a preceding `-`, so it is better to not confuse the user into thinking they're using the non- `-` format, when really they are using the with- `-` format.

- Added `__states__` to state modules, for cross-calling states. This enables using existing states when writing custom states. See *cross calling states*.

Windows Improvements

- Enhanced the windows minion silent installation with command line parameters to configure the salt master and minion name. See *Silent Installer Options*.
- Improved user management with additional capabilities in the user module for Windows.
- Improved patch management with a new module for managing windows updates (`win_wua`).
- Turned on multi-processing by default for windows in minion configuration.

Windows Software Repo Changes

A next-generation (ng) windows software repo is available for 2015.8.0 and later minions. When using this new repository, the repo cache is compiled on the Salt Minion, which enables pillar, grains and other things to be available during compilation time.

See the *Windows Software Repository* documentation for more information.

Changes to legacy Windows repository

If you have pre 2015.8 Windows minions connecting to your 2015.8 Salt master, you can continue to use the legacy Windows repository for these Salt minions.

If you were previously using this repository and have customized settings, be aware that several config options have been renamed to make their naming more consistent.

See the *Windows Software Repository* documentation for more information.

Win System Module

The unit of the `timeout` parameter in the `system.halt`, `system.poweroff`, `system.reboot`, and `system.shutdown` functions has been changed from seconds to minutes in order to be consistent with the linux timeout setting. (issue 24411) Optionally, the unit can be reverted to seconds by specifying `in_seconds=True`.

Other Improvements

- Sanitize sensitive fields in http.query
- Allow authorization to be read from Django and eauth
- Add templating to SMTP returner
- New REST module for SDB
- Added rest_timeout config option and timeout argument to jobs api call
- Provide config options for Raet lane and road buffer count. (Useful for BSD kernels)
- Implemented ZeroMQ socket monitor for master and minion
- Add end time to master job cache for jobs (optional, off by default)
- Tornado is now the default backend for http.request

- Support pillarenv selection as it's done for saltenv
- salt was updated to use python-crypto version 2.6.1, which removes the dependency on python-m2crypto.

Deprecations

- The `digital_ocean.py` Salt Cloud driver was removed in favor of the `digital_ocean_v2.py` driver as DigitalOcean has removed support for APIv1. The `digital_ocean_v2.py` was renamed to `digital_ocean.py` and supports DigitalOcean's APIv2.
- The `vsphere.py` Salt Cloud driver has been deprecated in favor of the `vmware.py` driver.
- The `openstack.py` Salt Cloud driver has been deprecated in favor of the `nova.py` driver.
- The use of `provider` in Salt Cloud provider files to define cloud drivers has been deprecated in favor of using `driver`. Both terms will work until the Nitrogen release of Salt. Example provider file:

```
my-ec2-cloud-config:
  id: 'HJGRYCILJLKJYG'
  key: 'kdjgfsgm;woormgl/aserigjksjdhasdfgn'
  private_key: /etc/salt/my_test_key.pem
  keyname: my_test_key
  securitygroup: default
  driver: ec2
```

- The use of `lock` has been deprecated and from `salt.utils.fopen`. `salt.utils.flopen` should be used instead.
- The following args have been deprecated from the `rabbitmq_vhost.present` state: `user`, `owner`, `conf`, `write`, `read`, and `runas`.
- The use of `runas` has been deprecated from the `rabbitmq_vhost.absent` state.
- Support for `output` in `mine.get` was removed. `--out` should be used instead.
- The use of `delim` was removed from the following functions in the `match` execution module: `pillar_pcre`, `pillar`, `grain_pcre`,

Security Fixes

CVE-2015-6918 - Git modules leaking HTTPS auth credentials to debug log

Updated the Git state and execution modules to no longer display HTTPS basic authentication credentials in loglevel debug output on the Salt master. These credentials are now replaced with `REDACTED` in the debug output. Thanks to Andreas Stieger <asteiger@suse.com> for bringing this to our attention.

Major Bug Fixes

- Fixed minion failover to next master on DNS errors (issue 21082)
- Fixed memory consumption in SaltEvents (issue 25557)
- Don't lookup outside system path in which() util (issue 24085)
- Fixed broken jobs rest api call (issue 23408)
- Fixed stale grains data using in modules (issue 24073)
- Added ssh_identities_only config flag for ssh-agent configured environments (issue 24096)

- Fixed ``object has no attribute'' errors for Raet transport (issue 21640)
- Flush event returners before master exit (issue 22814)
- Fix CommandExecutionError in grains generation with lspci missing (issue 23342)
- Fix salt-ssh against CentOS 7 when python-zmq not installed (issue 23503)
- Fix salt-ssh issues related to out-of-date six module (issue 20949)
- Fix salt-ssh thin generation after previous run was interrupted (issue 24376)
- Use proper line endings on Windows with ``file.managed'' w/contents (issue 25675)
- Fixed broken comment/uncomment functions in file.py (issue 24620)
- Fixed problem with unicode when changing computer description (issue 12255)
- Fixed problem with chocolatey module not loading (issue 25717)
- Fixed problem adding users to groups with spaces in the name (issue 25144)
- Fixed problem adding full name to user account (issue 25206)
- Fixed gem module stack trace (issue 21041)
- Fixed problem with file.managed when test=True (issue 20441)
- Fixed problem with powershell hanging while waiting for user input (issue 13943)
- Fixed problem where the salt-minion service would not consistently start (issue 25272)
- Fixed problem where pkg.refresh_db would return True even when winrepo.p was not found (issue 18919)
- Could someone please provide end to end example for Proxy Minion with REST (issue 25500)
- Proxy minions stopped working between 2014.7 and 2015.5 (issue 25053)
- Proxy minion documentation includes outdated code sample (issue 24018)
- Proxy Minion documentation missing grains example (issue 18273)
- Improve process management in proxy minion (issue 12024)
- Proxy minion never comes up with message ` I am XXX and I am not supposed to start any proxies.' (issue 25908)
- Fixed an issue that caused an exception when using Salt mine from pillar. (issue 11509)

20.2.22 Salt 2015.8.1 Release Notes

Version 2015.8.1 is a bugfix release for *2015.8.0*.

Security Fixes

CVE-2015-6941 - `win_useradd` module and `salt-cloud` display passwords in debug log

Updated the `win_useradd` module return data to no longer include the password of the newly created user. The password is now replaced with the string `XXX-REDACTED-XXX`. Updated the Salt Cloud debug output to no longer display `win_password` and `sudo_password` authentication credentials. Also updated the Linode driver to no longer display authentication credentials in debug logs. These credentials are now replaced with `REDACTED` in the debug output.

CVE-2015-6918 - Git modules leaking HTTPS auth credentials to debug log

Updated the Git state and execution modules to no longer display HTTPS basic authentication credentials in loglevel debug output on the Salt master. These credentials are now replaced with `REDACTED` in the debug output. Thanks to Andreas Stieger <asteiger@suse.com> for bringing this to our attention.

Major Bug Fixes

- Add support for `spm.d/*.conf` configuration of SPM (issue 27010)
- Fix `proxy` grains breakage for non-proxy minions (issue 27039)
- Fix global key management for git state
- Fix passing http auth to `util.http` from `state.file` (issue 21917)
- Fix `multiprocessing: True` in windows (on by default`)
- Add `pkg.info` to pkg modules
- Fix name of `serial` grain (this was accidentally renamed in 2015.8.0`)
- Merge config values from `master.d`/`minion.d` conf files (rather than flat update`)
- Clean grains cache on grains sync (issue 19853)
- Remove streamed response for fileclient to avoid HTTP redirection problems (issue 27093)
- Fixed incorrect warning about `osrelease` grain (issue 27065)
- Fix authentication via Salt-API with tokens (issue 27270)
- Fix winrepo downloads from https locations (issue 27081)
- Fix potential error with salt-call as non-root user (issue 26889)
- Fix global minion provider overrides (issue 27209)
- Fix backward compatibility issues for pecl modules
- Fix Windows uninstaller to only remove `./bin`, `salt*`, `nssm.exe`, `uninst.exe` (issue 27383)
- Fix misc issues with mongo returner.
- Add sudo option to cloud config files (issue 27398)
- Fix regression in RunnerClient argument handling (issue 25107)
- Fix `dockerng.running` replacing creation hostconfig with runtime hostconfig (issue 27265)
- Fix dockerng.running replacing creation hostconfig with runtime hostconfig (issue 27265)
- Increased performance on boto asg/elb states due to `__states__` integration
- Windows minion no longer requires powershell to restart (issue 26629)
- Fix x509 module to support recent versions of OpenSSL (issue 27326)
- Some issues with proxy minions were corrected.

Known Issues:

- Proxy minions currently cannot execute a highstate because of the way the proxymodule is being loaded internally. This will be fixed in a future release.

Changes for v2015.8.0..v2015.8.1

Extended changelog courtesy of Todd Stansell (https://github.com/tjstansell/salt-changelogs):

Generated at: 2015-10-01T04:45:02Z

Total Merges: **200**

Changes:

- **PR** #27584: (*jacobhammons*) added changes list to 2015.8.1 release notes
- **PR** #27575: (*rallytime*) Don't report existing instances as running only if they're actually terminated in EC2
- **PR** #27573: (*basepi*) [2015.8] Use the custom yaml serializer for minion_opts for salt-ssh
- **PR** #27514: (*clinta*) Recent Versions of OpenSSL don't allow importing incomplete PEMs
- **PR** #27564: (*jacobhammons*) Man pages
- **PR** #27522: (*twangboy*) Removed dependency on powershell to restart salt-minion
- **PR** #27550: (*rallytime*) [2015.8] Clean up salt-cloud logging and make it more useful
- **PR** #27517: (*jacobhammons*) Updated install docs
- **PR** #27526: (*eliasp*) Add missing newlines before param listing to fix doc rendering
- **PR** #27525: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #27513: (*terminalmage*) Fix integration tests for worktree addition in git >= 2.6
- **PR** #27510: (*rallytime*) Merge #27475 with test fixes
- **PR** #27451: (*ticosax*) [dockerng] Enforce usage of host_config and require docker-py>=1.4.0
- **PR** #27461: (*cachedout*) Only clean context if it exists
- **PR** #27473: (*terminalmage*) salt.utils.gitfs: Don't use close_fds=True on Windows
- **PR** #27496: (*blueyed*) Fix version reporting of gitpython
- **PR** #27502: (*ticosax*) Add test to check we don't call inspect_image on absent images.
- **PR** #27497: (*blueyed*) dockerng: fix image_present for forced, non-existent image
- **PR** #27411: (*terminalmage*) Fix invocation of git.config_get and git.config_set
- **PR** #27477: (*terminalmage*) Don't append role to hash_cachedir
- **PR** #27474: (*whiteinge*) Add fake pymongo version attribute for the docs
- **PR** #27466: (*blueyed*) Fix version reporting of python-gnupg and mysql-python
- **PR** #27465: (*ticosax*) Fix usage of dockerng ``cmd'' was #27459
- **PR** #27417: (*whiteinge*) Backport #25243 into 2015.8
- **PR** #27423: (*dmurphy18*) Changes to support configurable repository for Debian / Ubuntu
- **PR** #27428: (*rallytime*) Back-port #27398 to 2015.8
- **PR** #27429: (*rallytime*) Back-port #27344 to 2015.8
- **PR** #27450: (*ticosax*) [dockerng] Fix typo in docstring
- **PR** #27430: (*jacksontj*) Fix bug introduced in eee0291ff8b65ff1e22f4dc2447a74aa28a3ce7f
- **PR** #27418: (*terminalmage*) Don't always remove dest path in salt.utils.files.rename()
- **PR** #27383: (*twangboy*) Uninstaller only removes specific files and dirs

- **PR** #27416: (*rallytime*) Back-port #27399 to 2015.8
- **PR** #27394: (*jacksontj*) Remove streamed response for fileclient to avoid HTTP redirection problems
- **PR** #27415: (*ryan-lane*) Backwards compat fixes for pecl module
- **PR** #27407: (*meggiebot*) Adding stretch label definition
- **PR** #27388: (*basepi*) [2015.8] Fix global provider overrides
- **PR** #27386: (*rallytime*) Document tty: True usage in salt-ssh roster file
- **PR** #27380: (*jtand*) Skipping Async tests
- **PR** #27382: (*terminalmage*) Revert ``fixes #27217 clear_old_remotes clears wrong directory (gitfs)''
- **PR** #27361: (*cro*) Correct some issues with proxy minions
- **PR** #27364: (*ruzarowski*) SaltCloud[EC2] Fix missing credentials in modify_eni_properties api call
- **PR** #27349: (*jfindlay*) add freebsd install docs to release notes
- **PR** #27343: (*cachedout*) Close io loop before deleting attribute
- **PR** #27337: (*rallytime*) [2015.8] Fixup salt-cloud logging
- **PR** #27332: (*terminalmage*) Adjust dockerng/dockerio docstrings
- **PR** #27353: (*cachedout*) Fix case where var not set in config
- **PR** #27350: (*rallytime*) Allow IP-forwarding in GCE driver
- **PR** #27305: (*cachedout*) Re-init logging system on Windows when using multiprocessing
- **PR** #27331: (*terminalmage*) dockerng: Allow both cmd and command to be used to specify command
- **PR** #27327: (*isbm*) Fix a typo in the RPM output
- **PR** #27312: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #27303: (*jacobhammons*) Updated module doc index using https://github.com/saltstack/salt/pull...
- **PR** #27301: (*twangboy*) Pass ca_bundle for windows (fixes SSL Error)
- **PR** #27300: (*rallytime*) Back-port #27287 to 2015.8
- **PR** #27288: (*rallytime*) Filter on `name', not `id', when listing images
- **PR** #27283: (*jtand*) __grains__['osrelease'] returns a string
- **PR** #27276: (*rallytime*) Back-port #27218 to 2015.8
- **PR** #27275: (*rallytime*) Back-port #27213 to 2015.8
- **PR** #27274: (*rallytime*) Back-port #27272 to 2015.8
- **PR** #27271: (*isbm*) Bugfix: crash on token authentication via API
- **PR** #27251: (*rallytime*) Add support for post_uri in SoftLayer cloud drivers
- **PR** #27260: (*bechtoldt*) add missing module doc references
- **PR** #27254: (*jfindlay*) 2015.2,2015.8,Beryllium -> 2015.8.0
- **PR** #27245: (*rallytime*) If two ssh keynames are found in DigitalOcean, abort and warn the user.
- **PR** #27241: (*jfindlay*) osrelease is only an integer for fedora
- **PR** #27234: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #27240: (*isbm*) Backport of the fix of `pkg.info*' for Beryllium

- **PR** #27223: (*pprkut*) Support firewalld per interface zone config on rh7 systems
- **PR** #27238: (*bechtoldt*) salt.modules.disk.percent() throws KeyError when partition doesn't exist
- **PR** #27232: (*basepi*) [2015.8] Add stub release notes for 2015.8.1
- **PR** #27199: (*rallytime*) Avoid RunTimeError (dictionary changed size during iteration) with keys()
- **PR** #27206: (*rallytime*) Don't repeat GCE setup instructions, and make the use of .json files clearer
- **PR** #27210: (*rallytime*) Refactor some digital ocean functions
- **PR** #27197: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #27195: (*jacobhammons*) Fixed sphinx / latex build warnings and errors
- **PR** #27182: (*bernieke*) fix restart_on_error
- **PR** #27163: (*terminalmage*) Workaround upstream tornado bug affecting redirects
- **PR** #27177: (*rallytime*) Remove note - incorrect info
- **PR** #27173: (*rallytime*) Add the ability to specify multiple disks on the SoftLayer driver
- **PR** #27164: (*rallytime*) Make sure changes from #26824 to digital_ocean_v2.py driver make it to digital_ocean.py in 2015.8
- **PR** #27143: (*cachedout*) Clean grains cache on grains sync
- **PR** #27150: (*cachedout*) Merge config values from master.d/minion.d conf files
- **PR** #27137: (*jfindlay*) revert serial grain regression
- **PR** #27144: (*rallytime*) Don't stacktrace on softlayer_hw.show_all_prices if a code isn't supplied
- **PR** #27139: (*jacobhammons*) Updated key instruction on rhel7
- **PR** #27134: (*isbm*) Backport to 2015.8: ``pkg.info''
- **PR** #27119: (*l2ol33rt*) Boto dynamodb module should be using layer 2 abstractions
- **PR** #27092: (*perfinion*) salt/master: chdir to root not homedir
- **PR** #27131: (*jacobhammons*) Install docs
- **PR** #27124: (*jfindlay*) Backport #27123
- **PR** #27111: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #27122: (*terminalmage*) Fix broken link to git-config(1) docs
- **PR** #27115: (*jacobhammons*) Release docs
- **PR** #27110: (*rallytime*) Make sure -Q output is consistent across salt-cloud drivers
- **PR** #27050: (*twangboy*) Turned multiprocessing on
- **PR** #27086: (*techhat*) Document development of SPM loader modules
- **PR** #26941: (*msteed*) Make elasticsearch work as master job cache
- **PR** #27080: (*bechtoldt*) [Proposal] Add Github SPM label for issues
- **PR** #27064: (*twangboy*) Fixed user docs
- **PR** #27072: (*rallytime*) Back-port #26840 to 2015.8
- **PR** #27060: (*cro*) Fix grains breakage when hosts are not Linux, Windows, or SunOS
- **PR** #27051: (*rallytime*) Back-port #26953 to 2015.8

- **PR** #26864: (*terminalmage*) Only do git_pillar preflight checks on new-style git_pillar configs
- **PR** #26967: (*TheBigBear*) new URL for windows salt downloads
- **PR** #26921: (*terminalmage*) Get rid of error in legacy git pillar when using branch mapping notation
- **PR** #26923: (*rallytime*) Code clean up of cloud drivers and files
- **PR** #27010: (*rallytime*) Back-port #26988 to 2015.8
- **PR** #26985: (*rallytime*) Fix versionadded tag

20.2.23 Salt 2015.8.10 Release Notes

Version 2015.8.10 is a bugfix release for *2015.8.0*.

Final Release of Debian 7 Packages

Regular security support for Debian 7 ended on April 25th 2016. As a result, 2016.3.1 and 2015.8.10 will be the last Salt releases for which Debian 7 packages are created.

Mint Linux: Important Post-Upgrade Instructions

As a result of some upstream changes, the `os` grain on Mint Linux is now being detected as `LinuxMint` (issue 33295). Run the following command **after you upgrade to 2015.8.10** to reset the `os` grain to `Mint` and the `os_family` grain to `Debian`:

```
salt -G 'os:LinuxMint' grains.setvals "{'os': 'Mint', 'os_family': 'Debian'}"
```

Changes for v2015.8.9..v2015.8.10

Salt 2015.8.10 includes fixes for the following known issues in 2015.8.9:

- issue 33376: pip state broken in 2015.8.9 with pip <6.0
- PR 33386: Fix traceback in logging for config validation

Since 2015.8.10 includes only two fixes, the 2015.8.9 changes list is included below for convenience:

Extended changelog courtesy of Todd Stansell (https://github.com/tjstansell/salt-changelogs):

Total Merges: **145**

Changes:

- **PR** #33293: (*twangboy*) Fix minion start retry on Windows (2015.8)
- 22c4331 linux_acl: Allow `-` as a separation character in ACL permissions. Fixes #31270 (#33172) (#33305)
- 7a181f2 Handle more ipv6 error as an exception #33299 (#33300)
- eb47a15 Ignore retcode when checking service's status (#33294)
- **PR** #33274: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- 4f3596a Add comment for test=true w/o changes ret and add changes dict example (#33254)
- 2a30c48 Update Git Policy docs to match Contribution guide (#33252)

- 056c273 Fix #33238 (#33239)
- 1cd34ab Properly report on invalid gitfs/git_pillar/winrepo repos (#33245)
- **PR** #33253: (*rallytime*) Update the release process docs
- 8c2c5b1 update 2015.8.9 release notes (#33251)
- 8ee8ee3 Handle ipv6 error as an exception (#33246)
- 855bed3 Check rendered YAML for invalid keys (#33213)
- 6fb25a8 Make note of files that begin with `_' in master.d or minion.d dirs (#33224)
- a6dc0d2 Gate jnpr imports in salt.proxy.junos.py (#33150)
- 64a89c4 Add docs for the http state (#33222)
- 0a32163 Don't stacktrace when using --out=highstate at CLI during staterun. (#33215)
- 04d714d propagate opts to salt.util.http call (#33219)
- c8236c0 update 2015.8.9 release notes (#33237)
- **PR** #33217: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- 730bec1 [2015.8] Merge forward from 2015.5 to 2015.8 (#33207)
- 379b151 Add a fetch when compiling git_pillar for masterless minions (#33204)
- b3805d8 cloud.clouds.ec2: cache each named node (#33164)
- 86db5df Properly handle failed git commands when redirect_stderr=True (#33203)
- 8a0950d Don't force use of global ssh_config when git identity file is specified (#33152)
- ce07133 update 2015.8.9 release notes (#33198)
- **PR** #33188: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- e9108e0 add 2015.8.9 release notes (#33161)
- 2d9919e [2015.8] Update to latest bootstrap script v2016.05.10 (#33156)
- 033bef2 Hash fileclients by opts (#33142)
- f520fa3 Back-port #31769 to 2015.8 (#33139)
- **PR** #33144: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #33140: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- ad607ef If cache_jobs: True is set, populate the local job cache when running salt-call (#33100)
- 64689a6 Fix broken parsing of usermgmt.conf on OpenBSD (#33135)
- 06a382e Add a check that the cmdline of the found proc matches (#33129)
- 10018e9 salt.utils.gitfs: fix formatting for warning messages (#33064)
- d45b599 Fix 33058 (#33099)
- **PR** #33106: (*abednarik*) Moved _finger_fail method to parent class.
- 20c7e10 clarify docs that map is designed to be run once. is not stateful (#33102)
- 558561d cloud.query needs to define mapper.opts (#33098)
- **PR** #33096: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- 22a327b salt-cloud: fix ipv6-only virtual machines (#32865)

- e788f7e modules.npm: do not log npm --version at info level (#33084)
- **PR** #33081: (*jfindlay*) ssh docs: install py-2.6 for RHEL 5
- **PR** #33088: (*isbm*) Bugfix: Restore boolean values from the repo configuration
- 2c6326f fix tests for file.blockplace to remove newline (#33082)
- **PR** #32892: (*isbm*) Resolve Zypper locks on asynchronous calls
- 3e0bf23 Add fun_args to scheduled return data (part of #24237) (#33039)
- 264c0d4 Don't append a newline when creating new content with blockreplace (#33049)
- 54b783a Pass all data to batch.run() call when using --failhard (#33048)
- 2dbfa55 Display command output when command fails with batch + failhard options (#33050)
- add9199 Allow security_groups kwarg for boto_elb.present to be string or list (#33053)
- 111701c [2015.8] Merge forward from 2015.5 to 2015.8 (#33054)
- 1066063 File and User test fixes for 2015.8 on Fedora23 (#33056)
- f97b5d5 Back-port #33030 to 2015.8 (#33040)
- e90a501 Update the docs for saltutil.find_job to be more clear/accurate (#33017)
- d3d77ce Add saltenv to the cmd.script state function (#33031)
- 3434f44 Fix syndic regression (#33021)
- 4bb3ca5 Compare uid and gid instead of name and group (#32674)
- 9ca5b02 Allow batch mode to use verbose option, as well as show_jid. (#32996)
- 81c0fa4 Fixed glusterfs.peered output (#32955)
- 8c70d7a Clarify some arg docs (#32994)
- 00fbeab Fix boto_secgroup_test (#32986)
- 3362367 fix user cron on solarish operating systems (#32970)
- 07e38bc salt.log.setup: process user args before format (#32796)
- b2d7c81 doc.ref.states.ordering: clarify requisite change (#32934)
- df41d5d mode should default to `text' (#32928)
- f581a82 Remove FileClient class references from docs - it doesn't exist. (#32925)
- 31b96de Update contents_grains option with relevant docs (#32922)
- **PR** #32926: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- 1cd6a45 specify volume tags in profile configuration (#32908)
- 85ca86d Update docs to warn users that -1 isn't valid for iptables insert state (#32906)
- cb68706 Allow profile options to be specified in provider file when using maps (#32900)
- 1a55fcb Clarify service state opening docs - uses `service' virtualname (#32880)
- **PR** #32884: (*terminalmage*) Fix incorrect deprecation notice
- **PR** #32878: (*jacobhammons*) added note about updating the bootstrap script in salt-cloud using th...
- **PR** #32869: (*rallytime*) Use correct config setting in cloud syndic docs
- **PR** #32844: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8

- eb8fb6b Back-port #31139 to 2015.8 (#32868)
- 4bb5545 backport PR #32732 for issue #23714 (#32847)
- 5ea003b Add pyvmomi version warning to Getting Started with VMware docs (#32845)
- 44f08d0 Pass None as memory limit. (#32841)
- feebe69 Back-port #32813 to 2015.8 (#32839)
- 3b81031 various improvements on cloud deploy script docs (#32659)
- bf85987 update bootstrap to 2016.04.18 release (#32668)
- 83dee63 Back-port #29322 to 2015.8 (#32785)
- **PR** #32787: (*rallytime*) Back-port #32722 to 2015.8
- **PR** #32786: (*rallytime*) Back-port #32703 to 2015.8
- a6a42740 Merge branch `pr-32775' into 2015.8
- cda00f4 Improve documentation on pygit2 versions (#32779)
- 1d6d234 Properly handle minion failback failure. (#32749)
- 3751a27 Document pillar cache options (#32643)
- 35c8af3 modules.win_dacl: consistent case of dacl constants (#32720)
- 2cd0817 Update external auth documentation to list supported matcher. (#32733)
- bba089d Check dependencies type before appling str operations (#32693)
- 3aa0605 Handle when beacon not configured and we try to enable/disable them (#32692)
- **PR** #32718: (*garethgreenaway*) Fixes to schedule.list in 2015.8
- **PR** #32684: (*captaininspiration*) Fix routes for redhat < 6
- 7cdd512 Handle a couple of arguments better (Azure) (#32683)
- aaa03bc Fix for issue 32523 (#32672)
- 21081b1 Don't access deprecated Exception.message attribute. (#32556)
- 5d1e9a4 Lower log level for pillar cache (#32655)
- **PR** #32588: (*anlutro*) Fix salt-ssh module function call argument type juggling by JSON encoding them
- 5e7edfc yumpkg: Ignore epoch in version comparison for explicit versions without an epoch (#32563)
- fea6056 Fixing critical bug to remove only the specified Host instead of the entire Host cluster (#32640)
- 0477f66 align OS grains from older SLES with current one (#32649)
- 8d46244 Prevent crash if pygit2 package is requesting re-compilation of the eâ¦ (#32652)
- **PR** #32614: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #32616: (*rallytime*) Back-port #32547 to 2015.8
- 3047471 Fix comments value in salt.states.pkgrepo example (#32604)
- ab9da90 Revert PR #32480 and apply #32314 with fixes / documentation (#32558)
- c84c921 Better log message on minion restart if master couldn't be reached. (#32576)
- 3c81798 Don't return None from eval_master (#32555)
- **PR** #32536: (*rallytime*) Back-port #31898 to 2015.8

- d12a1c2 Fix binary search and replace (#32542)
- **PR** #32539: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #32531: (*ticosax*) [dockerng] Fix support of dockerng.volume_present when no volume is on present.
- 5d73d54 Enhance dockerng.wait() to control success on exit_code and on already stopped containers (#32475)
- 214f01e Bugfix: salt-key crashes if tries to generate keys to the directory w/o write access (#32436)
- 288839f Turn on exc_info when logging failed minion startup (#32515)
- 08a8020 Add ignore_epoch option to pkg.installed/removed/purged states (#32520)
- 492ebfc Isbm zypper list products sles11 crash (#32505)
- ae89882 Clear VCS fsbackend and git_pillar locks on master start (#32480)
- a6482a3 Use win32api to get Total System Memory (#32491)
- **PR** #32487: (*terminalmage*) Add explanation of nonzero epoch requirement to pkg.installed state documentation
- **PR** #32482: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- f5bd6bd Backport 31164 and 31364 (#32474)
- **PR** #32450: (*cachedout*) Pass parser options into batch mode
- b299835 Issue #28706: Fix state user.present behavior. (#32448)
- cef33d5 Argument name in docs should match actual arg name (#32445)
- **PR** #32432: (*ticosax*) [dockerng] Fix Domainname introspection
- **PR** #32427: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #32423: (*jtand*) Update glusterfs_test to be inline with #32312
- **PR** #32425: (*cachedout*) Fix salt-cloud parallel provisioning
- 51fb2ac FreeBSD supports packages in format java/openjdk7 so the prior commit broke that functionality. Check freebsd/pkg #1409 for more info.
- 709410a Improve git_pillar documentation/logging
- c53efc3 Update master config docs
- **PR** #32323: (*mcalmer*) fix sorting by latest version when called with an attribute
- **PR** #32376: (*amontalban*) Fixes saltstack/salt`#28262`_
- 0d9a06b Cleaner deprecation process with decorators
- 6979fda Correcty index glusterfs bricks
- **PR** #32393: (*jfindlay*) modules.win_timezone: don't list all zones in debug log
- **PR** #32372: (*rallytime*) Back-port #32358 to 2015.8
- **PR** #32392: (*multani*) Fix documentation on boto_asg and boto_elb modules and states
- **PR** #32373: (*cachedout*) Resolve memory leak in authentication
- **PR** #32126: (*cro*) Add a couple CLI examples for the highstate outputter.
- **PR** #32353: (*mcalmer*) Prevent metadata download when listing installed products
- **PR** #32321: (*abednarik*) Better message when minion fail to start
- **PR** #32345: (*nmadhok*) [2015.8] Check if profile key exists in `vm_` dict

- **PR** #32343: (*Ferbla*) Fixed win_wua example documentation
- **PR** #32360: (*rallytime*) Make sure hash_type is lowercase in master/minion config files
- **PR** #32361: (*cro*) SDB is no longer experimental
- **PR** #32336: (*rallytime*) Back-port #28639 to 2015.8
- **PR** #32332: (*rallytime*) Don't unsubscribe from open events on the CLI too early on long-running commands
- **PR** #32333: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #32289: (*rallytime*) New salt-cloud instances should not use old hash_type default.
- **PR** #32291: (*twangboy*) Fix bad output for chocolatey.version (fixes #14277)
- **PR** #32295: (*rallytime*) Test the contents of `deploy_scripts_search_path' in salt.config.cloud_config
- **PR** #32315: (*ahus1*) fixing file.managed with requests lib
- **PR** #32316: (*vutny*) Update Salt Bootstrap tutorial
- **PR** #32325: (*bdrung*) Re-add shebang to ssh-id-wrapper shell script
- **PR** #32326: (*bdrung*) Fix typos
- **PR** #32300: (*twangboy*) Add documentation to disable winrepo/winrepo_ng
- **PR** #32288: (*terminalmage*) use dictupdate.merge instead of dict.update to merge CLI pillar overrides
- **PR** #32243: (*isbm*) Ensure latest pkg.info_installed ensure latest
- **PR** #32268: (*ticosax*) [dockerng] Improve detection for older versions of docker-py
- **PR** #32258: (*jacobhammons*) Replaces incorrect reference to *master_alive_check*
- **PR** #32254: (*twangboy*) Fix Display Name with spaces in win_servermanager
- **PR** #32248: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #32230: (*terminalmage*) systemd.py: Support both update-rc.d and chkconfig as managers of sysv services
- **PR** #32249: (*jacobhammons*) Fixes windows download paths to account for patch
- **PR** #32221: (*dmurphy18*) Fix version check, fix extracting Major and Minor versions from __ver...
- **PR** #32227: (*twangboy*) Remove list2cmdline usage from win_service.py
- **PR** #32239: (*anlutro*) Add state file name to warning log line
- **PR** #32215: (*DmitryKuzmenko*) rhel oscodename
- **PR** #32217: (*jacobhammons*) 2015.8.8.2 release notes
- **PR** #32212: (*rallytime*) Back-port #32197 to 2015.8
- **PR** #32211: (*rallytime*) Back-port #32210 to 2015.8
- **PR** #32209: (*rallytime*) Back-port #32208 to 2015.8
- **PR** #32204: (*ticosax*) [dockerng] Consider labels carried by the image when comparing user defined labels.
- **PR** #32186: (*rallytime*) Add some ``best practices'' information to test documentation
- **PR** #32176: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #32163: (*rallytime*) Update nacl.config docs to use key value instead of `None'
- **PR** #32166: (*vutny*) *salt.states.file*: correct examples with multiline YAML string
- **PR** #32168: (*rallytime*) Lint 2015.8

- **PR** #32165: (*terminalmage*) Make __virtual__ for rhservice.py more robust
- **PR** #32160: (*cachedout*) Fix beacon tutorial docs
- **PR** #32145: (*paclat*) fixes 29817
- **PR** #32133: (*basepi*) Pass eauth user/groups through salt-api to destination functions
- **PR** #32127: (*rallytime*) Add runners to __salt__ docs
- **PR** #32143: (*DmitryKuzmenko*) Set auth retry count to 0 if multimaster mode is failover.
- **PR** #32134: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #32091: (*clarkperkins*) Fixed the regression in 410da78
- **PR** #32135: (*rallytime*) [2015.8] Support multiple valid option types when performing type checks
- **PR** #31760: (*sakateka*) SMinion need wait future from eval_master
- **PR** #32106: (*jfindlay*) update suse master service patch
- **PR** #32130: (*jacobhammons*) Added known issues 32004 and 32044 to 2015.8.8 release notes
- **PR** #32105: (*clarkperkins*) Fixed invalid deploy_scripts_search_path
- **PR** #32117: (*tomlaredo*) Fixed validation type for file_ignore_glob
- **PR** #32113: (*sakateka*) Fix log message for AsyncAuth initialization
- **PR** #32116: (*ticosax*) Obtain default value of *memory_swap* from the container.
- **PR** #32098: (*rallytime*) Back-port #32083 to 2015.8
- **PR** #32099: (*jacobhammons*) 2015.8.8 release docs
- **PR** #32088: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #32074: (*Xiami2012*) Fix code for proto args in modules.iptables
- **PR** #32053: (*basepi*) [2015.8] Fix rabbitmq_user.present tag handling
- **PR** #32023: (*sbreidba*) Move constant declaration into member variable to avoid issues when m…
- **PR** #32026: (*techhat*) Don't require the decode_out file to already exist
- **PR** #32019: (*rallytime*) Back-port #32012 to 2015.8
- **PR** #32015: (*ticosax*) [dockerng] Fix ports exposition when protocol is passed.
- **PR** #31999: (*jacobhammons*) Fixes a doc build exception caused by missing mocks for modules.win_dacl
- **PR** #31992: (*notpeter*) salt-cloud: add D2 and G2 EC2 instance types
- **PR** #31981: (*lloydoliver*) include rotational disks in grains under linux
- **PR** #31970: (*twangboy*) Add apply_template_on_contents for windows
- **PR** #31960: (*aletourneau*) fixed ec2 get_console_output
- **PR** #31958: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- 3934c66 Merge branch `2015.5' into `2015.8'
- **PR** #31935: (*twangboy*) Back port nullsoft build script from 2015.8
- **PR** #31912: (*jfindlay*) log.mixins: remove extermporaneous .record

20.2.24 Salt 2015.8.11 Release Notes

Version 2015.8.11 is a bugfix release for *2015.8.0*.

Returner Changes

- Any returner which implements a `save_load` function is now required to accept a `minions` keyword argument. All returners which ship with Salt have been modified to do so.

New Configuration Parameter: `rotate_aes_key`

- `Rotate_aes_key` causes Salt to generate a new AES key whenever a minion key is deleted. This eliminates the chance that a deleted minion could continue to eavesdrop on communications with the master if it continues to run after its key is deleted. See the entry in the documentation for *`rotate_aes_key`*.

Ubuntu 16.04 Packages

SaltStack is now providing official Salt 2015.8 packages for Ubuntu 16.04.

Changes for v2015.8.10..v2015.8.11

Extended changelog courtesy of Todd Stansell (https://github.com/tjstansell/salt-changelogs):

Generated at: 2016-07-14T21:16:18Z

Total Merges: **122**

Changes:

- **PR** #34676: (*cachedout*) Revert ``Modify lodaer global test to use populated dunders''
- **PR** #34601: (*lorengordon*) Clarifies the proper way to reference states
- bc63f25 Lint 34644 (#34651)
- 5036026 Adjust the mine test a little bit to give it a better chance of success (#34647)
- **PR** #34642: (*jtand*) Check that mysqladmin exists before running mysql integration tests
- **PR** #34618: (*jtand*) Network state integration test test=True
- **PR** #34617: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- b90ae40 Add support for edge case when Cmd and Entrypoint can't be blanked (#34593)
- 12b579c When sorting list actual_data, make it a list (#34590)
- 7dd8035 Gate docker unit test to check for docker (#34591)
- ae38c87 Add a bunch of documentation on getting files from other environments (#34560)
- **PR** #34531: (*terminalmage*) Support ignore_epoch argument in version comparisons
- **PR** #34545: (*terminalmage*) Handle cases where Docker Remote API returns an empty ExecutionDriver
- **PR** #34546: (*rallytime*) Rename unit.states.boto_secgroup to unit.states.boto_secgroup_test
- **PR** #34537: (*rallytime*) Rename tests.unit.simple to tests.unit.simple_test
- fbab2f8 [2015.8] Update bootstrap script to latest stable (#34527)

- 6b8c76a Prevent many errors in the test suite in loader tests (#34521)
- c2f296c Fix wrong order of retention_policy_exists (#34507)
- **PR** #34518: (*terminalmage*) Fix pkg.latest integration test for non-LTS ubuntu
- **PR** #34513: (*cachedout*) Lower the log level for modules which cannot be loaded to trace
- **PR** #34498: (*rallytime*) Use -O in the wget example in the bootstrap tutorial for the develop branch
- 3ebba02 Rename some unit test files by adding _test (#34503)
- 8722257 Improve top file merging documentation (#34505)
- 6ce7cb9 Gracefully handle non-XML output in GlusterFS execution module. (#34492)
- 7529945 Use skipTest for network state integration test (#34489)
- 0f3f87f Update dnsmasq.get_config docs to use correct config_file param. (#34488)
- **PR** #34462: (*terminalmage*) Use --always when available to git describe
- **PR** #34467: (*rallytime*) Back-port #34457 to 2015.8
- **PR** #34432: (*twangboy*) Fix file.append
- **PR** #34429: (*terminalmage*) Skip version checking for targeted packages in pkg.latest state
- 0a26459 Forgot reference to inotify (#34455)
- **PR** #34451: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #34401: (*terminalmage*) Use rpmdev-vercmp as a fallback for version comparison on RHEL5
- **PR** #34366: (*steverweber*) Update service.py
- **PR** #34426: (*cro*) Document that inotify is Linux only
- **PR** #34392: (*cro*) Clarify that salt-cloud doesn't get installed by bootstrap
- **PR** #34373: (*jtand*) Network state integration test
- d6af1de Optimize pkg integration tests and add a couple new tests (#34377)
- **PR** #34368: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- 94e0946 Back-port #34324 to 2015.8 (#34344)
- 11dc020 Making salt-ssh pass proper return codes for jinja rendering errors (#34342)
- f6bd1ad Revert py3modernize lint changes (#34339)
- **PR** #34306: (*ghedo*) Fix iptables.flush state: Do not force `filter' table when flushing
- 0c60fea Doc clarifications to file modules, addition of new *profile* log level to docs, fixed example in dnsmasq (#34323)
- b793426 Remove unnecessarily-disabled sanity check (#34325)
- **PR** #34335: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- a6d3cc6 Typo in dockerio doc (#34319)
- **PR** #34312: (*rallytime*) [2015.8] Update to latest bootstrap script v2016.06.27
- **PR** #34307: (*rallytime*) Fix test example in integration testing docs
- **PR** #34233: (*thegoodduke*) ipset: fix the comment containing blank
- **PR** #34257: (*rallytime*) Use `config_dir' setting instead of CONFIG_DIR in gpg renderer

- **PR** #34274: (*clinta*) Don't escape source before calling managed
- **PR** #34258: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #34093: (*terminalmage*) Catch CommandExecutionError in pkg states
- **PR** #34136: (*meaksh*) Fixed behavior for SUSE OS grains in 2015.8
- 56c7267 fix regression from #33681 which causes pulling a list of s3 objects via s3.query to fail (#34208)
- 02eb331 Fix a pair of gitfs bugs (#34218)
- **PR** #34182: (*rallytime*) Handle child PIDs differently depending on the availability of psutils
- 5d3ec31 Clarify pkg.list_repo_pkgs docstring for held packages (#34188)
- 5bca5c4 Change target for dockerng assuming default status to Nitrogen release (#34206)
- **PR** #34184: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #34176: (*rallytime*) Back-port #34103 to 2015.8
- **PR** #34179: (*terminalmage*) Raise the correct exception when gitfs lockfile is empty
- **PR** #34178: (*terminalmage*) Remove unnecesssary comment
- 6387d16 fix salt --summary to count not responding minions correctly (#34165)
- e5949ea doc: add missing dot (#34175)
- 47595d6 Typo fix (#34174)
- **PR** #34077: (*rallytime*) Add some grains targeting tests
- **PR** #34142: (*isbm*) Move log message from INFO to DEBUG.
- 79a719b Update documentation on ``refresh'' behavior in pkg states (#34100)
- 6d0d52f modules.pkg int tests: skip refresh_db upon error (#34072)
- **PR** #34069: (*rallytime*) Add a test to check for disconnected minion messaging
- **PR** #34048: (*terminalmage*) RFC: proposed fix for multiple fileserver updates in masterless runs
- **PR** #34011: (*rallytime*) Back-port #33948 and #34009 to 2015.8
- bca4371 Fixed a bug in the consul.py module that was preventing services (#34051)
- **PR** #34045: (*jacobhammons*) Updated latest release version
- f9bfcde Always make changes to minion config if set (#34020)
- e25dba4 More YAML indentation fixes in state module examples (#34030)
- **PR** #34018: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- 7d940ae states.file: fix indentation in YAML examples (#34003)
- 4c7fac0 Remove loader test for pam module (#34002)
- **PR** #33990: (*jacobhammons*) Adds links to several current Salt-related projects
- **PR** #33983: (*twangboy*) Clarify the *account_exists* parameter
- **PR** #33951: (*jfindlay*) modules.gem int tests: more fixes
- **PR** #33984: (*jfindlay*) Add docs and tests to disk state
- **PR** #33985: (*rallytime*) Write some more simple batch command tests
- 6080846 acl.ClientACL: add unit tests (#33684)

- a74f1b8 ZD 762 (#33942)
- **PR** #33946: (*rallytime*) Back-port #33698 to 2015.8
- **PR** #33952: (*rallytime*) Add base argument to salt-ssh grains wrapper for filter_by func
- 4a80649 Adds a ``Generated on <timestamp>'' line to the footer of each doc html page in the doc (#33962)
- b3ec39d Correct issue with ping on rotate with minion cache (#33765)
- **PR** #33888: (*jfindlay*) random.org checks
- 2dc1914 Add connecting_settings to boto_elb state attributes list (#33936)
- 91a2184 Wait for up to a minute for sync_after_install (#33917)
- **PR** #33877: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #33827: (*cachedout*) Fix broken locate.locate function
- **PR** #33839: (*cachedout*) Fix another unit test stacktrace in pkg_resource
- **PR** #33840: (*cachedout*) Remove matcher tests
- **PR** #33836: (*cachedout*) Fixing more stupid unit tests
- **PR** #33805: (*jfindlay*) states.pkg int tests: skip if pkg mgr unavailable
- **PR** #33808: (*jfindlay*) fix some problems with the gem module integration tests
- **PR** #33770: (*jfindlay*) service state integration tests
- **PR** #33691: (*jtand*) Gem integration test
- **PR** #33777: (*sodium-chloride*) Fix minor docstring issue of arg being missing
- **PR** #33759: (*cachedout*) Catch no minions exception in batch mode
- **PR** #33719: (*cachedout*) Catch oserror for race condition
- **PR** #33712: (*meaksh*) Fix for groupadd execution module failures in SLES11 systems
- **PR** #33718: (*rallytime*) Back-port #33700 to 2015.8
- **PR** #33727: (*terminalmage*) Fix git_pillar edge case for remote repos without a master branch
- **PR** #33728: (*jfindlay*) Make *configurable_test_state* configurable in test mode
- **PR** #33729: (*twangboy*) Add exclude option to win_servermanager
- **PR** #33743: (*vutny*) Debian installation docs: drop section about community-maintained repo
- 56c0a42 Create missing jid dir if it doesn't exist (#33653)
- **PR** #33654: (*twangboy*) Fix win servermanager
- **PR** #33679: (*terminalmage*) Only compile the template contents if they evaluate to True
- **PR** #33685: (*jfindlay*) modules.cp.get_url: add test for https://
- **PR** #33581: (*dincamihai*) Call zypper refresh after adding/modifying a repository
- **PR** #33681: (*rallytime*) Back-port #33599 to 2015.8
- **PR** #33396: (*babilen*) Issue 33393
- **PR** #33652: (*terminalmage*) Lower the log level for failed auths
- **PR** #33615: (*danslimmon*) Fix crash on unconnectable MySQL server (resolves #33582)
- **PR** #33558: (*twangboy*) Fix win servermanager

- **PR** #33555: (*cachedout*) Fix crashing Maintenence process
- **PR** #33501: (*meaksh*) unit tests for rpm.checksum() and zypper.download()
- **PR** #33513: (*rallytime*) Add a section to the jinja docs about escaping jinja
- **PR** #33520: (*jacobhammons*) Updated version numbers in the docs for the 2016.3.0 release
- **PR** #33507: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #33503: (*rallytime*) Add docs about minion config file in standalone minion docs
- **PR** #33474: (*cachedout*) Fix diskusage beacon
- **PR** #33465: (*meaksh*) jobs.exit_success allow one to check if a job has executed and exit successfully
- **PR** #33487: (*jtand*) Add docstring examples to glance.py and nova.py [2015.8]
- **PR** #33481: (*rallytime*) Fix docs about etcd config options and add pillar_opts doc
- **PR** #33490: (*rallytime*) Document the postgres.psql_query function
- **PR** #33480: (*jfindlay*) states.service: minor doc updates
- 4f96cc1 Return full pending computer name (#33483)
- a89be5e Use six.string_types in jobs runner (#33499)
- **PR** #33491: (*BlaineAtAffirm*) fix jobs.list_jobs failing with search_target
- **PR** #33478: (*rallytime*) Back-port #32484 to 2015.8
- **PR** #33457: (*rallytime*) Make doc formatting consistent and use correct versionadded
- 1dfa956 Don't allow a ``repo'' kwarg for pkgrepo.managed (#33477)
- b4071b0 Allow for config entry to be a list in a dict for beacons (#33476)
- **PR** #33469: (*meaksh*) check the RPM signature of zypper pkg.download packages and report errors
- 00f9090 Add docs about PyYAML's 1024 character limitations for simple keys (#33459)
- 3b12f39 Prevent several minion processes on the same machine (#33464)
- c8b4f33 Make --gpg-auto-import-keys a global param when calling zypper (#33432)
- 0c4e38c Fix the saltutil.wheel function and add integration tests (#33414)
- e4f00f9 Make sure the path we're removing is present first - avoid an OSError (#33440)
- 93fd00b Avoid a syntax error by using '' instead of escaped ` (#33443)
- ec60b9c Fix virtual function (#33436)
- **PR** #33438: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- c9d0de4 Documentation update in file.serialize. (#33421)
- f8a90eb Fix LVM parameter devices as a pure list. Comma separated lists are câ¦ (#33398)
- 3989e5b Spelling correction. (#33406)
- 9accb53 Update windows pkg.[install|remove] error logic (#33321)
- 04ac89d Add note about reload_modules functionality for pkg.installed (#33374)
- 637c2af Add note to absolute_imports practice about __future__ import (#33377)
- d35b81d Document how to set the alias file location for alias state (#33380)
- **PR** #33403: (*jacobhammons*) 2015.8.10 release notes

- **PR** #33381: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- 946d27e Fix traceback in logging for config validation (#33386)
- 38fbcf8 Add note about name parameter in git_pillar docs (#33369)
- 4925199 Add win_pkg to list of modules that support ``version'' in pkg.installed (#33362)
- 7a400a9 Add note to docs about api settings for Hipchat API v2 (#33365)
- 37e1930 Add initscripts, SystemD service units and environment files for Debian (#32857)
- **PR** #33370: (*jacobhammons*) Update docs version to 2015.8.9
- **PR** #33366: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- f248003 Remove mentions of windows not supporting pkgs param (#33361)
- 4fdb097 Update job_cache and keep_jobs docs to be more specific to their behavior (#33328)
- 2f06918 Properly detect newer Linux Mint distros (#33359)
- d85096c Fix UnboundLocalError in git.latest (#33340)
- e602446 Describes parameters in register_instances function (#33339)
- 5c29c65 Fix some link errors in the test writing tutorial (#33347)
- e532e58 Fix network.managed for windows (#33312)
- 11a2525 Bp 28467 calm mine (#33327)
- b897f2c import ps from psutil_compat in beacons (#33334)
- 089c1a2 remove redundant, incorrect sudo_runas config documentation (#33318)
- 1f7fda2 Disambiguate non-exact matches when checking if sysv service is enabled (#33324)
- 8c1f19a Allow concurrency mode in state runs if using sudo (#33325)
- ed14ef2 Fix master hanging after a request from minion with removed key. (#33333)
- daafa27 Cleanup comments in smbios.get output (fixes #33266) (#33306)
- bfe12d9 Fix iptables --match-set (#23643) (#33314)
- **PR** #33308: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8

20.2.25 Salt 2015.8.12 Release Notes

Version 2015.8.12 is a bugfix release for *2015.8.0*.

Changes for v2015.8.11..v2015.8.12

Extended changelog courtesy of Todd Stansell (https://github.com/tjstansell/salt-changelogs):

Generated at: 2016-08-19T16:06:27Z

Total Merges: **57**

Changes:

- **PR** #35611: (rallytime*) Everything in the sample master config file should be commented out
- **PR** #35569: (*rallytime) Write test for multiple unless commands where 1st cmd passes and 2nd fails
- **PR** #35600: (*rallytime) Update release notes for 2015.8.12

- **PR** #35599: (*rallytime*) Update release notes for 2015.8.12
- **PR** #35584: (*terminalmage*) Update linux_sysctl tests to reflect new context key
- **PR** #35575: (*terminalmage*) Add warning about AWS flagging of nmap usage
- **PR** #35577: (*terminalmage*) Unit file changes for 2015.8.12, 2016.3.3
- **PR** #35566: (*rallytime*) Back-port #35545 to 2015.8
- **PR** #35545: (*hu-dabao*) fix-35384, fix cmd.run unless
- **PR** #35492: (*terminalmage*) Clarify config.get docstring
- **PR** #35483: (*gtmanfred*) use __utils__ in salt.cloud
- **PR** #35546: (*whiteinge*) Salt api eauth fail gracefully
- **PR** #35525: (*UtahDave*) add missing glob import
- **PR** #35540: (*rallytime*) Whitespace fix for 2015.8
- **PR** #35510: (*terminalmage*) Better systemd integration
- **PR** #35513: (*cachedout*) Might be a good idea to be able to download the software we make
- **PR** #35302: (*Ch3LL*) Add job cache test
- **PR** #35512: (*cachedout*) Fixup 35419
- **PR** #35497: (*deepakhj*) Fixes spacing in requirements files
- **PR** #35508: (*terminalmage*) Add Carbon to versionadded for git.diff
- **PR** #35486: (*rallytime*) Update bootstrap script to latest stable (2016.08.16)
- **PR** #35413: (*cachedout*) Resolve path issues with cp.push
- **PR** #35476: (*cachedout*) Fixup SSH bug where sudo without sudo user would break
- **PR** #35471: (*terminalmage*) win_pkg: Fix traceback when package is not installed
- **PR** #35448: (*isbm*) Add ignore_repo_failure option to suppress zypper's exit code 106 on ...
- **PR** #35451: (*isbm*) Bugfix: zypper mod repo unchanged
- **PR** #35453: (*theothergraham*) fixes #34279 - disk cache ttl expiry
- **PR** #35459: (*thatch45*) Ensure that output for salt-ssh gets back
- **PR** #35460: (*rallytime*) [2015.8] Update bootstrap script to latest stable (2016.08.15)
- **PR** #35442: (*cachedout*) Fix cp.push_dir pushing empty dirs
- **PR** #35436: (*cachedout*) Minor doc fixup
- **PR** #35132: (*sjorge*) fixes , causing lots of mayham (onchange) with 2016.3.2 for me
- **PR** #35394: (*rallytime*) Back-port #34573 to 2015.8
- **PR** #34573: (*cedwards*) Update freebsd.rst
- **PR** #35359: (*terminalmage*) Clean up open filehandles
- **PR** #35339: (*isbm*) Bugfix: Prevent continuous restart, if a dependency wasn't installed
- **PR** #35357: (*twangboy*) Fix file.recurse with clean: True on Windows (2015.8)
- **PR** #35323: (*thatch45*) Fix issue with bad error check in salt-vt
- **PR** #35325: (*kev009*) Fix freebsd netstat route on fbsd 10+

- **PR** #35301: (*bobrik*) Pass port to ssh.check_known_host, closes #35264
- **PR** #35309: (*terminalmage*) file.recurse: Do not convert octal mode string to int
- **PR** #35290: (*terminalmage*) Resolve a couple bugs in orchestration output
- **PR** #35211: (*cachedout*) Alternative sudo users for salt-ssh
- **PR** #35271: (*bobrik*) Default state_output_profile to True everywhere, closes #35166
- **PR** #35233: (*terminalmage*) Do not attempt to get fqdn_ip{4,6} grains when ipv{4,6} grains are empty
- **PR** #35202: (*multani*) doc: fix broken links in the test documentation page
- **PR** #35236: (*rallytime*) Back-port #35119 to 2015.8
- **PR** #35119: (*derekmaciel*) Assume two EVRs are equal if E and V are equal but one R is missing.
- **PR** #35240: (*derekmaciel*) Backport #35225 to 2015.8
- **PR** #35225: (*derekmaciel*) Add missing documentation for pkg.installed
- **PR** #35241: (*terminalmage*) Ensure max recursion in gitfs results in no blob object being returned.
- **PR** #35245: (*rallytime*) Back-port #35039 to 2015.8
- **PR** #35039: (*whiteinge*) Add saltenv support to module.run
- **PR** #35249: (*terminalmage*) Fix regression in git.latest
- **PR** #35174: (*rallytime*) Back-port #35146 to 2015.8
- **PR** #35146: (*cachedout*) Don't discard running beacons config when listing becaons
- **PR** #34827: (*thatch45*) fix beacon list to include all beacons being processed
- **PR** #35173: (*rallytime*) Back-port #35135 to 2015.8
- **PR** #35135: (*rallytime*) Add missing CLI Examples to aws_sqs module funcs
- **PR** #35145: (*jacobhammons*) doc version update to 2015.8.11, updates to release notes
- **PR** #35114: (*terminalmage*) Add clarification docs on a common git_pillar misconfiguration
- **PR** #34768: (*hrumph*) Fixes #34767
- **PR** #35043: (*rallytime*) Start release notes file for 2015.8.12
- **PR** #35050: (*terminalmage*) [orchestration] Properly handle runner/wheel funcs which accept a `saltdev' argument
- **PR** #35066: (*jfindlay*) returners.postgres_local_cache: do not log in __virtual__
- **PR** #35024: (*bobrik*) Cache systemd unit update check per unit, closes #34927
- **PR** #35026: (*cachedout*) Expressly deny a minion if a key cannot be found
- **PR** #35000: (*rallytime*) Back-port #33875 and #34999 to 2015.8
- **PR** #33875: (*jmesquita*) Fix naive fileserver map diff algorithm
- **PR** #34994: (*rallytime*) Back-port #34835 to 2015.8
- **PR** #34835: (*thatch45*) Make the mine and publish combine minion and master opts in salt-ssh
- **PR** #34991: (*cachedout*) SSH timeout
- **PR** #34976: (*cachedout*) Refine errors in client
- **PR** #34831: (*thatch45*) If the thin does not match, then redeploy, don't error

- **PR** #34916: (*cachedout*) Master performance improvement
- **PR** #34911: (*cachedout*) Backport #34906
- **PR** #34906: (*cachedout*) Set timeout for run_salt in test suite
- **PR** #34898: (*hrumph*) Stop multiple refreshes during call to pkg.list_upgrades
- **PR** #34606: (*isbm*) Bugfix: Exit on configuration read (backport)
- **PR** #34862: (*thatch45*) Fix salt-ssh cacheing issue
- **PR** #34869: (*terminalmage*) Fail git.latest states with uncommitted changes when force_reset=False
- **PR** #34859: (*cachedout*) Fix wheel test
- **PR** #34822: (*thatch45*) Fix salt-ssh state.high and state.low
- **PR** #34847: (*cachedout*) Add an option to skip the verification of client_acl users
- **PR** #34827: (*thatch45*) fix beacon list to include all beacons being processed
- **PR** #34833: (*rallytime*) Back-port #28521 to 2015.8
- **PR** #28521: (*gongled*) SPM: packaging doesn't work in Python 2.6. Fixed.
- **PR** #34823: (*rallytime*) Back-port #25276 to 2015.8
- **PR** #25276: (*jacobhammons*) copy spm.1 man page during setup
- **PR** #34828: (*thatch45*) Fix #34648
- **PR** #34818: (*jtand*) Skip mysql state test if mysqladmin is not available
- **PR** #34642: (*jtand*) Check that mysqladmin exists before running mysql integration tests
- **PR** #34803: (*junovitch*) salt/state.py: set **`chunk['order'] = 0' with `order: first'; fixes `#24744`_**
- **PR** #34773: (*randomed*) Bugfix: Startup states on minions are not being written to mysql returner
- **PR** #34751: (*cachedout*) Remove unnedeed config test
- **PR** #34606: (*isbm*) Bugfix: Exit on configuration read (backport)
- **PR** #34754: (*cachedout*) Disable test
- **PR** #34741: (*rallytime*) Back-port #34726 to 2015.8
- **PR** #34726: (*martinhoefling*) Always loop over updated keys in non recursive update
- **PR** #34721: (*rallytime*) Add output_file option to master config docs
- **PR** #34689: (*Azidburn*) fix second run problems with pkg.installed using sources
- **PR** #34695: (*isbm*) Bugfix: Zypper *pkg.list_products* returns False on some empty values (2015.8)

20.2.26 Salt 2015.8.13 Release Notes

Version 2015.8.13 is a bugfix release for *2015.8.0*.

Security Fixes

CVE-2017-5192: local_batch client external authentication not respected

The `LocalClient.cmd_batch()` method client does not accept `external_auth` credentials and so access to it from salt-api has been removed for now. This vulnerability allows code execution for already-authenticated users and is only in effect when running salt-api as the `root` user.

CVE-2017-5200: Salt-api allows arbitrary command execution on a salt-master via Salt's ssh_client

Users of Salt-API and salt-ssh could execute a command on the salt master via a hole when both systems were enabled.

We recommend everyone on the 2015.8 branch upgrade to a patched release as soon as possible.

Changes for v2015.8.12..v2015.8.13

Generated at: 2017-01-09T21:17:06Z

Statistics:

- Total Merges: **3**
- Total Issue references: **3**
- Total PR references: **5**

Changes:

- 3428232 Clean up tests and docs for batch execution
- 3d8f3d1 Remove batch execution from NetapiClient and Saltnado
- 97b0f64 Lintfix
- d151666 Add explanation comment
- 62f2c87 Add docstring
- 9b0a786 Explain what it is about and how to configure that
- 5ea3579 Pick up a specified roster file from the configured locations
- 3a8614c Disable custom rosters in API
- c0e5a11 Add roster disable flag

20.2.27 Salt 2015.8.14 Release Notes

Version 2015.8.14 is a bugfix release for *2015.8.0*.

20.2.28 Salt 2015.8.2 Release Notes

Note: A significant orchestrate issue #29110 was discovered during the release process of 2015.8.2, so it has not been officially released. Please use 2015.8.3 instead.

Extended changelog courtesy of Todd Stansell (https://github.com/tjstansell/salt-changelogs):

Total Merges: **378**

Changes:

- **PR** #28730: (*garethgreenaway*) Fixes to how return_job is handled in the scheduler for the salt master.
- **PR** #28848: (*cro*) Lint
- **PR** #28842: (*cachedout*) Add transport setting to shell test
- **PR** #28837: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #28827: (*jacksontj*) Cleanup virtual_timer in loader
- **PR** #28836: (*cachedout*) Cast to dict to fix wheel tests in tcp
- **PR** #28834: (*cachedout*) Fix breakage in tcp server
- **PR** #28804: (*cachedout*) TCP test fixes
- **PR** #28826: (*basepi*) [2015.8] Add new tornado deps to salt-ssh thin
- **PR** #28759: (*jfindlay*) simplify stdin use of stdin in at.present state
- **PR** #28824: (*rallytime*) Back-port #28778 and #28820 to 2015.8
- **PR** #28803: (*jfindlay*) decode strings to utf-8
- **PR** #28782: (*rallytime*) Fixes to rabbitmq user state
- **PR** #28789: (*nmadhok*) Provide ability to enable/disable customization for newly create VMs using VMware salt-cloud driver
- **PR** #28768: (*mrosedale*) 2015.8
- **PR** #28772: (*rallytime*) rabbitmq.list_user_permissions returns a dict, not a list. Don't expect a list.
- **PR** #28774: (*rallytime*) Back-port #28725 to 2015.8
- **PR** #28775: (*rallytime*) Back-port #28740 to 2015.8
- **PR** #28755: (*rallytime*) Move most vmware driver list_* functions to use salt.utils.vmware functions
- **PR** #28744: (*jfindlay*) import gate elementtree
- **PR** #28758: (*jfindlay*) remove redundant logic in useradd execution module
- **PR** #28757: (*mbarrien*) Bug fix: pip command to not quote spaces in cmd line args
- **PR** #28764: (*multani*) Various documentation fixes
- **PR** #28752: (*aboe76*) Update openSUSE grain for tumbleweed
- **PR** #28713: (*hexedpackets*) Rename consul.list to consul.list_keys.
- **PR** #28719: (*jacobhammons*) removed dependencies info from docs
- **PR** #28709: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #28710: (*rallytime*) Pass kwargs correctly to _get_group from get_group_id
- **PR** #28698: (*rallytime*) Back-port #28530 to 2015.8
- **PR** #28700: (*rallytime*) Back-port #28679 to 2015.8
- **PR** #28695: (*s0undt3ch*) [2015.8] Update to latest bootstrap script v2015.11.09
- **PR** #28656: (*clarkperkins*) #28526 fixed yumpkg module issue with pkg.installed
- **PR** #28672: (*jfindlay*) add OS grain support for SuSE Leap
- **PR** #28673: (*jfindlay*) add hidden_opts to mount.mounted

- **PR** #28667: (*cro*) saltutil.sync_all should sync proxymodules as well as the rest.
- **PR** #28665: (*jfindlay*) fixes to windows execution and state modules
- **PR** #28660: (*techhat*) Don't sign empty regions
- **PR** #28632: (*terminalmage*) Fixes/improvements to pkgbuild state/modules
- **PR** #28658: (*techhat*) Remove _pkgdb_fun() references
- **PR** #28653: (*rallytime*) Provide possible parameters for boto_rds.present engine values
- **PR** #28649: (*bdrung*) Fix OS related grains on Debian
- **PR** #28646: (*rallytime*) Back-port #28614 to 2015.8
- **PR** #28647: (*rallytime*) Back-port #28624 to 2015.8
- **PR** #28648: (*rallytime*) Merge branch `2015.5' into `2015.8'
- **PR** #28638: (*anlutro*) Salt-SSH: Return more concise error when SSH command fails
- **PR** #28644: (*pass-by-value*) Make sure versionchanged is correct
- **PR** #28615: (*The-Loeki*) Fixes to FreeBSD pkg
- **PR** #28613: (*cachedout*) Add facility to deepcopy bound methods in Py2.6 and apply to grains
- **PR** #28612: (*rallytime*) Remove unsupported storage_type argument for parity with boto_rds module
- **PR** #28611: (*rallytime*) [2015.8] Be explicit about salt.utils.vmware function calls
- **PR** #28610: (*pass-by-value*) Lxc config additions
- **PR** #28602: (*nasenbaer13*) Allow setting of custom dimensions in asg alarm specification
- **PR** #28596: (*rallytime*) Merge branch `2015.5' into `2015.8'
- **PR** #28593: (*blueyed*) doc: fix typo with salt.states.file: s/preseve/preserve/
- **PR** #28578: (*twangboy*) Fixed the script… something got broke…
- **PR** #28579: (*jfindlay*) fix __virtual__ returns: tls,uptime mods
- **PR** #28584: (*rallytime*) If AssociatePublicIpAddress is set to True, don't auto-assign eip.
- **PR** #28576: (*jacksontj*) Only encode the zmq message once
- **PR** #28587: (*cachedout*) Reset yaml rendering hooks to avoid leaks
- **PR** #28581: (*basepi*) Revert b4875e585a165482c4c1ddc8987d76b0a71ef1b0
- **PR** #28573: (*jacksontj*) Add *body* to salt.utils.http.query returns
- **PR** #28564: (*s0undt3ch*) [2015.8] Update to latest bootstrap script v2015.11.04
- **PR** #28561: (*Oro*) Issue #28527 boto_rds.create does not work
- **PR** #28560: (*bdrung*) Fix various typos
- **PR** #28550: (*jfindlay*) check timedatectl errno and return stdout on failure
- **PR** #28545: (*jfindlay*) pass on concurrent create of jid_dir in local_cache
- **PR** #28544: (*rallytime*) Start moving some vmware.py cloud funcs to utils/vmware.py
- **PR** #28543: (*gtmanfred*) clean up changes for pkg.uptodate and supervisord.dead
- **PR** #28538: (*jfindlay*) decode path and url to utf-8 in url.create
- **PR** #28533: (*jfindlay*) decode highstate error messages to utf-8

- **PR** #28547: (*nmadhok*) [Backport] [2015.8] Tasks can be in queued state instead of running
- **PR** #28535: (*techhat*) Fail gracefully if 169.254* isn't available
- **PR** #28536: (*cro*) Default configuration file for proxy minions.
- **PR** #28534: (*rallytime*) Add versionadded directive for vpc_name arg in boto_secgroup.present
- **PR** #28516: (*rallytime*) Back-port #28489 to 2015.8
- **PR** #28506: (*basepi*) [2015.8] Log minion list for all rosters, at debug level
- **PR** #28514: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #28502: (*cachedout*) Lint #28427
- **PR** #28464: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #28486: (*rallytime*) Back-port #26945 to 2015.8
- **PR** #28472: (*gtmanfred*) overwrite more than one value with names
- **PR** #28493: (*rallytime*) Back-port #28492 to 2015.8
- **PR** #28494: (*whiteinge*) Fix filter_by passing incorrect parameters to match functions
- **PR** #28491: (*rallytime*) Back-port #28388 to 2015.8
- **PR** #28465: (*twangboy*) Fix #12363: Password Expiration in Windows
- **PR** #28485: (*nasenbaer13*) Fix invalid usage of _get_conn causing #28484
- **PR** #28454: (*sdm24*) Fixed nodegroup doc formatting to correctly link to pillar_opts in the master config
- **PR** #28487: (*cachedout*) Lint 28456
- **PR** #28457: (*sdm24*) Clarified comments for grains/core.py for ip_interfaces, ip4_interfac...
- **PR** #28473: (*anlutro*) Show check_cmd output on failure
- **PR** #28460: (*jtand*) Skipped wipefs test if wipefs does not exist on OS
- **PR** #28426: (*terminalmage*) pkgbuild.built: make template engine optional
- **PR** #28422: (*cachedout*) Handle windows logging on thread_multi [WIP]
- **PR** #28425: (*twangboy*) Fix #13513 - Reflection
- **PR** #28417: (*rallytime*) Add note about azure sdk version to getting started docs
- **PR** #28410: (*jacksontj*) Add retries to the zeromq.AsyncReqMessageClient
- **PR** #28404: (*rallytime*) Back-port #28395 to 2015.8
- **PR** #28405: (*opdude*) Detect legacy versions of chocolatey correctly
- **PR** #28187: (*sjansen*) fix at.present
- **PR** #28375: (*merll*) Merge pillar includes correctly
- **PR** #28376: (*ryan-lane*) Support update of route53 records with multiple values
- **PR** #28377: (*terminalmage*) Deprecate `always' in favor of `force' in pkgbuild.built
- **PR** #28380: (*cro*) Add missing call for service provider
- **PR** #28348: (*jfindlay*) salt.utils.alias informs user they are using a renamed function
- **PR** #28364: (*jtand*) In CentOS 5 the .split() causes a stacktrace.
- **PR** #28361: (*rallytime*) Back-port #28087 to 2015.8

- **PR** #28360: (*multani*) Various documentation fixes
- **PR** #28370: (*rallytime*) Back-port #28276 to 2015.8
- **PR** #28353: (*merll*) Consider each pillar match only once.
- **PR** #28334: (*anlutro*) iptables needs -m comment for --comment to work
- **PR** #28340: (*jfindlay*) sdecode file and dir lists in fileclient
- **PR** #28344: (*ryan-lane*) Fix iptables state for non-filter tables
- **PR** #28343: (*rallytime*) Back-port #28342 to 2015.8
- **PR** #28330: (*rallytime*) Back-port #28305 to 2015.8
- **PR** #28270: (*rallytime*) Refactor RabbitMQ Plugin State to correctly use test=true and format errors
- **PR** #28269: (*rallytime*) Refactor rabbitmq_user state to use test=True correctly
- **PR** #28299: (*rallytime*) Add test for availability_zone check to boto_vpc_tests
- **PR** #28306: (*sdm24*) Updated the Nodegroup docs to include how to target nodegroups in SLS Jinja
- **PR** #28308: (*rallytime*) Firewalld state services should use --add-service, not --new-service
- **PR** #28302: (*DmitryKuzmenko*) Always close socket even if there is no stream.
- **PR** #28282: (*keesbos*) Fix for __env__ in legacy git_pillar
- **PR** #28258: (*pass-by-value*) Add service module for ssh proxy example
- **PR** #28294: (*bechtoldt*) correct a bad default value in http utility
- **PR** #28185: (*jtand*) Added single package return for latest_version, fixed other bug.
- **PR** #28297: (*cachedout*) Lint fix proxy junos
- **PR** #28210: (*terminalmage*) Fix for ext_pillar being compiled twice in legacy git_pillar code
- **PR** #28265: (*jfindlay*) fix blockdev execution and state modules
- **PR** #28266: (*rallytime*) Back-port #28260 to 2015.8
- **PR** #28253: (*rallytime*) Back-port #28063 to 2015.8
- **PR** #28231: (*rallytime*) Make sure we're compairing strings when getting images in the DO driver
- **PR** #28224: (*techhat*) Optimize create_repo for large packages
- **PR** #28214: (*rallytime*) Don't stacktrace if invalid credentials are passed to boto_route53 state
- **PR** #28228: (*rallytime*) Back-port #27562 to 2015.8
- **PR** #28232: (*rallytime*) Add documentation to supply the ssh_username: freebsd config to DO docs
- **PR** #28198: (*jacobhammons*) Added note regarding missing spm exe on Debian/Ubuntu
- **PR** #28182: (*erchn*) Some fixes for nova driver for Rackspace
- **PR** #28181: (*rallytime*) Revamp firewalld state to be more stateful.
- **PR** #28176: (*cro*) Add ping function
- **PR** #28167: (*The-Loeki*) file.serialize needs to add a final newline to serialized files
- **PR** #28168: (*rallytime*) Make sure availability zone gets passed in boto_vpc module when creating subnet
- **PR** #28148: (*basepi*) [2015.8] Only expand nodegroups to lists if there is a nested nodegroup
- **PR** #28155: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8

- **PR** #28149: (*pass-by-value*) Add clarification to cloud profile doc about host
- **PR** #28146: (*cachedout*) Lint dracr.py
- **PR** #28141: (*rallytime*) Don't use RAM for root disk size in linode.py
- **PR** #28143: (*jtand*) Removed blank line at end of chassis.py
- **PR** #28021: (*blueyed*) Handle includes in *include_config* recursively
- **PR** #28095: (*rallytime*) Back-port #28001 to 2015.8
- **PR** #28096: (*rallytime*) Back-port #28061 to 2015.8
- **PR** #28139: (*rallytime*) Back-port #28103 to 2015.8
- **PR** #28098: (*jacksontj*) For all multi-part messages, check the headers. If the header is not ...
- **PR** #28134: (*bernieke*) fix unicode pillar values #3436
- **PR** #28076: (*redmcg*) Replace option `i' with an explicit queryformat
- **PR** #28119: (*jacksontj*) Check if the remote exists before casting to a string.
- **PR** #28105: (*jfindlay*) add reason for not loading localemod
- **PR** #28108: (*cachedout*) Set logfile permsissions correctly
- **PR** #27922: (*cro*) WIP States/Modules for managing Dell FX2 chassis via salt-proxy
- **PR** #28104: (*pass-by-value*) Add documentation for proxy minion ssh
- **PR** #28020: (*DmitryKuzmenko*) LazyLoader deepcopy fix.
- **PR** #27933: (*eliasp*) Provide all git pillar dirs in *opts[pillar_roots]*
- **PR** #28013: (*rallytime*) Back-port #27891 to 2015.8
- **PR** #28018: (*rallytime*) Add example to Writing Grains of how grains can be loaded twice
- **PR** #28084: (*cachedout*) #28069 with lint
- **PR** #28079: (*The-Loeki*) Fix for trace dump on failing imports for win32com & pythoncom 4 win_task
- **PR** #28081: (*The-Loeki*) fix for glance state trace error on import failure
- **PR** #28066: (*jacksontj*) Use the generic *text* attribute, not .body of the handler
- **PR** #28019: (*rallytime*) Clean up version added and deprecated msgs to be accurate
- **PR** #28058: (*rallytime*) Back-port #28041 to 2015.8
- **PR** #28055: (*rallytime*) Back-port #28043 to 2015.8
- **PR** #28046: (*pass-by-value*) Add pkg install and remove functions
- **PR** #28050: (*ryan-lane*) Use a better method for checking dynamodb table existence
- **PR** #28042: (*jfindlay*) fix repo path in ubuntu installation documentation
- **PR** #28033: (*twangboy*) Fixed win_useradd.py
- **PR** #28027: (*cro*) Make ssh conn persistent.
- **PR** #28029: (*jacobhammons*) Updated release notes with additional CVE information
- **PR** #28022: (*jacobhammons*) Updated Debian and Ubuntu repo paths with new structure for 2015.8.1
- **PR** #27983: (*rallytime*) Pip state run result should be False, not None, if installation error occurs.
- **PR** #27991: (*twangboy*) Fix for #20678

- **PR** #27997: (*rallytime*) Remove note about pip bug with pip v1 vs pip v2 return codes
- **PR** #27994: (*jtand*) Fix schedule_test failure
- **PR** #27992: (*cachedout*) Make load beacon config into list
- **PR** #28003: (*twangboy*) Fix #26336
- **PR** #27984: (*rallytime*) Versionadded for clean_file option for pkgrepo
- **PR** #27989: (*ryan-lane*) Do not try to remove the main route table association
- **PR** #27982: (*pass-by-value*) Add example for salt-proxy over SSH
- **PR** #27985: (*jacobhammons*) Changed current release to 8.1 and added CVEs to release notes
- **PR** #27979: (*cachedout*) Fix regression with key whitespace
- **PR** #27977: (*cachedout*) Decode unicode names in fileclient/server
- **PR** #27981: (*jtand*) Fixed trailing whitespace lint
- **PR** #27969: (*jeffreyctang*) fix parse of { on next line
- **PR** #27978: (*terminalmage*) Add note about dockerng.inspect_image usage
- **PR** #27955: (*pass-by-value*) Bp 27868
- **PR** #27953: (*The-Loeki*) Fix CloudStack cloud for new `driver' syntax
- **PR** #27965: (*ryan-lane*) Fail in boto_asg.present if alarms fail
- **PR** #27958: (*twangboy*) Added new functionality to win_task.py
- **PR** #27959: (*techhat*) Change __opts__ to self.opts
- **PR** #27943: (*rallytime*) Back-port #27910 to 2015.8
- **PR** #27944: (*rallytime*) Back-port #27909 to 2015.8
- **PR** #27946: (*jtand*) Changed grain to look at osmajorrelease instead of osrelease
- **PR** #27914: (*rallytime*) Use eipalloc instead of eni in EC2 interface properties example
- **PR** #27926: (*rallytime*) Back-port #27905 to 2015.8
- **PR** #27927: (*ryan-lane*) Do not manage ingress or egress rules if set to None
- **PR** #27928: (*rallytime*) Back-port #27908 to 2015.8
- **PR** #27676: (*ticosax*) [dockerng] WIP No more runtime args passed to docker.start()
- **PR** #27885: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #27882: (*twangboy*) Created win_task.py module
- **PR** #27802: (*terminalmage*) Correct warning logging when update lock is present for git_pillar/winrepo, add runner function for clearing git_pillar/winrepo locks
- **PR** #27886: (*rallytime*) Handle group lists as well as comma-separated group strings.
- **PR** #27746: (*anlutro*) timezone module: handle timedatectl errors
- **PR** #27816: (*anlutro*) Make system.reboot use *shutdown -r* when available
- **PR** #27874: (*rallytime*) Add mention of Periodic Table naming scheme to deprecation docs
- **PR** #27883: (*terminalmage*) Work around --is-ancestor not being present in git-merge-base before git 1.8.0
- **PR** #27877: (*rallytime*) Back-port #27774 to 2015.8

- **PR** #27878: (*rallytime*) Use apache2ctl binary on SUSE in apache module
- **PR** #27879: (*cro*) Add docs for 2015.8.2+ changes to proxies
- **PR** #27731: (*cro*) Add __proxy__ to replace opts['proxymodule']
- **PR** #27745: (*anlutro*) Add pip_upgrade arg to virtualenv.managed state
- **PR** #27809: (*ticosax*) [dockerng] Remove dockerng.ps caching
- **PR** #27859: (*ticosax*) [dockerng] Clarify doc port bindings
- **PR** #27748: (*multani*) Fix #8646
- **PR** #27850: (*rallytime*) Back-port #27722 to 2015.8
- **PR** #27851: (*rallytime*) Back-port #27771 to 2015.8
- **PR** #27833: (*jfindlay*) decode path before string ops in fileclient
- **PR** #27837: (*jfindlay*) reverse truth in python_shell documentation
- **PR** #27860: (*flavio*) Fix OS related grains on openSUSE and SUSE Linux Enterprise
- **PR** #27768: (*rallytime*) Clean up bootstrap function to be slightly cleaner
- **PR** #27797: (*isbm*) Zypper module clusterfix
- **PR** #27849: (*rallytime*) Don't require a size parameter for proxmox profiles
- **PR** #27827: (*techhat*) Add additional error checking to SPM
- **PR** #27826: (*martinhoefling*) Fixes #27825
- **PR** #27824: (*techhat*) Update Azure errors
- **PR** #27795: (*eguven*) better change reporting for postgres_user groups
- **PR** #27799: (*terminalmage*) Fix usage of identity file in git.latest
- **PR** #27717: (*pass-by-value*) Proxy beacon example
- **PR** #27793: (*anlutro*) update code that changes log level of salt-ssh shim command
- **PR** #27761: (*terminalmage*) Merge git pillar data instead of using dict.update()
- **PR** #27741: (*ticosax*) [dockerng] pass filters argument to dockerng.ps
- **PR** #27760: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #27757: (*jfindlay*) fix virtual fcn return doc indentation
- **PR** #27754: (*rallytime*) Change test.nop version directive to 2015.8.1
- **PR** #27734: (*jacobhammons*) Updated saltstack2 theme to add SaltConf16 banner
- **PR** #27727: (*rallytime*) Merge #27719 w/pylint fix
- **PR** #27724: (*jfindlay*) update __virtual__ return documentation
- **PR** #27725: (*basepi*) Fix global injection for state cross calls
- **PR** #27628: (*ticosax*) [dockerng] Add support of *labels* parameter for dockerng
- **PR** #27704: (*jacobhammons*) Update compound matcher docs to clarify the usage of alternate delimi...
- **PR** #27705: (*rallytime*) Merge #27602 with final pylint fix
- **PR** #27691: (*notpeter*) Faster timeout (3s vs 2min) for instance metadata lookups. #13850.
- **PR** #27696: (*blueyed*) loader.proxy: call *_modules_dirs* only once

- **PR** #27630: (*ticosax*) Expose container_id in mine.get_docker
- **PR** #27600: (*blueyed*) dockerng: use docker.version=auto by default
- **PR** #27689: (*rallytime*) Merge #27448 with test fixes
- **PR** #27693: (*jacobhammons*) initial engines topic, updates to windows repo docs
- **PR** #27601: (*blueyed*) dockerng: handle None in container.Names
- **PR** #27596: (*blueyed*) gitfs: fix UnboundLocalError for `msg'
- **PR** #27651: (*eliasp*) Check for existence of `subnetId' key in subnet dict
- **PR** #27639: (*rallytime*) Docement version added for new artifactory options
- **PR** #27677: (*rallytime*) Back-port #27675 to 2015.8
- **PR** #27637: (*rallytime*) Back-port #27604 to 2015.8
- **PR** #27657: (*garethgreenaway*) Fix to pkg state module
- **PR** #27632: (*rallytime*) Back-port #27539 to 2015.8
- **PR** #27633: (*rallytime*) Back-port #27559 to 2015.8
- **PR** #27579: (*rallytime*) Change boto_route53 region default to `universal' to avoid problems with boto library
- **PR** #27581: (*tkwilliams*) Add support for `vpc_name' tag in boto_secgroup module and state
- **PR** #27624: (*nasenbaer13*) Wait for sync is not passed to boto_route53 state
- **PR** #27614: (*blueyed*) doc: minor fixes to doc and comments
- **PR** #27627: (*eyj*) Fix crash in boto_asg.get_instances if the requested attribute is None
- **PR** #27616: (*jacobhammons*) Updated windows software repository docs
- **PR** #27569: (*lomeroe*) boto_vpc.get_subnet_association now returns a dict w/key of vpc_id, a…
- **PR** #27567: (*whiteinge*) Use getattr to fetch psutil.version_info
- **PR** #27583: (*tkwilliams*) Fixup zypper module
- **PR** #27597: (*blueyed*) gitfs: remove unused variable ``bad_per_remote_conf''
- **PR** #27585: (*ryan-lane*) Fix undefined variable in cron state module

20.2.29 Salt 2015.8.3 Release Notes

Security Fix

CVE-2015-8034: Saving `state.sls` cache data to disk with insecure permissions

This affects users of the `state.sls` function. The state run cache on the minion was being created with incorrect permissions. This file could potentially contain sensitive data that was inserted via jinja into the state SLS files. The permissions for this file are now being set correctly. Thanks to @zmalone for bringing this issue to our attention.

Changes

Merges: **452**

Changes:

- **PR** #29172: (*basepi*) [2015.8] Backport new philips_hue proxy features from develop
- **PR** #29167: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #29141: (*optix2000*) Add test case for require: sls with only import statements
- **PR** #29072: (*terminalmage*) Several gitfs/git_pillar fixes
- **PR** #29118: (*ticosax*) [dockerng] Add networking capabilities
- **PR** #29145: (*anlutro*) Remove duplicate import of salt.utils.s3
- **PR** #29148: (*lomeroe*) correcting parameter calls to boto get_zone/create_zone functions in ...
- **PR** #29108: (*lorengordon*) Enforce length as an int, fixes #29107
- **PR** #29125: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #29126: (*fcrozat*) Fix deployment when umask is non-standard
- **PR** #29124: (*rallytime*) Back-port #28130 to 2015.8
- **PR** #29076: (*RealKelsar*) We can't query installed use flags for a non installed pkg
- **PR** #29097: (*rallytime*) Back-port #29070 to 2015.8
- **PR** #29090: (*gtmanfred*) clean up novaclient module
- **PR** #29095: (*terminalmage*) Add warning about pygit2 API instability
- **PR** #28919: (*cro*) Update Philips Hue proxy minion to support __proxy__ instead of proxymodule stored in __opts__
- **PR** #29065: (*cachedout*) Handle failures inside python's inspect if a module is reloaded
- **PR** #29057: (*paulnivin*) Add local file support for file.managed source list
- **PR** #29017: (*jfindlay*) pagerduty runner: add missing salt.utils import
- **PR** #29039: (*anlutro*) Allow passing list of pip packages to virtualenv.managed
- **PR** #29047: (*schwing*) Fix salt.modules.gpg.import_key exception: `GPG_1_3_1 referenced before assignment'
- **PR** #29050: (*terminalmage*) Make git_pillar global config option docs more prominent
- **PR** #29048: (*nmadhok*) Fix incorrect debug log statement
- **PR** #29024: (*jfindlay*) cache runner test: add new unit tests
- **PR** #28967: (*cro*) Fix some issues with password changes
- **PR** #29020: (*basepi*) [2015.8] Add special list-only nodegroup support to salt-ssh
- **PR** #28970: (*terminalmage*) Properly handle non-string saltenvs
- **PR** #28959: (*rallytime*) Add blade password example and make note of timeout
- **PR** #29000: (*kiorky*) [Mergeable] Fix up LXC
- **PR** #29014: (*jfindlay*) systemd module: remove unneeded col command
- **PR** #28983: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #28969: (*rallytime*) Back-port #28825 to 2015.8
- **PR** #28787: (*chrigl*) closes #28784
- **PR** #28944: (*rallytime*) The ret result must contain `name', not `chassis_name' for the state compiler.

- **PR** #28957: (*terminalmage*) Fix version number for new state option
- **PR** #28950: (*DmitryKuzmenko*) PR 28812 which test fix
- **PR** #28812: (*isbm*) Enhance `which' decorator reliability
- **PR** #28934: (*terminalmage*) git.latest: Add update_head option to prevent local HEAD from being updated
- **PR** #28937: (*rallytime*) Update dellchassis state example to use correct jinja syntax
- **PR** #28889: (*jfindlay*) state compiler: relax aggregate conditional check
- **PR** #28921: (*rallytime*) Back-port #25470 to 2015.8
- **PR** #28922: (*rallytime*) Change 2015.8.2 release note title to reflect proper version
- **PR** #28891: (*jfindlay*) rh_service module: fix logic in _chkconfig_is_enabled
- **PR** #28892: (*jfindlay*) grains.core: correctly identify SLES 11 distrib_id
- **PR** #28910: (*lorengordon*) Fix winrepo command in windows pkg mgmt doc
- **PR** #28896: (*rallytime*) Back-port #28855 to 2015.8
- **PR** #28895: (*rallytime*) Back-port #28823 to 2015.8
- **PR** #28885: (*kt97679*) fix for: service.enabled fails on xen server #28754
- **PR** #28880: (*terminalmage*) Add ``profile'' loglevel
- **PR** #28882: (*basepi*) [2015.8] salt-ssh: Check return type to make sure it's an error
- **PR** #28867: (*rallytime*) [fx2 grains] Grains functions should return dictionaries
- **PR** #28863: (*mhoogendoorn*) Fix ebuild.install causing extra refresh_db calls.
- **PR** #28865: (*jfindlay*) add 2015.8.2 release notes
- **PR** #28730: (*garethgreenaway*) Fixes to how return_job is handled in the scheduler for the salt master.
- **PR** #28848: (*cro*) Lint
- **PR** #28842: (*cachedout*) Add transport setting to shell test
- **PR** #28837: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #28827: (*jacksontj*) Cleanup virtual_timer in loader
- **PR** #28836: (*cachedout*) Cast to dict to fix wheel tests in tcp
- **PR** #28834: (*cachedout*) Fix breakage in tcp server
- **PR** #28804: (*cachedout*) TCP test fixes
- **PR** #28826: (*basepi*) [2015.8] Add new tornado deps to salt-ssh thin
- **PR** #28759: (*jfindlay*) simplify stdin use of stdin in at.present state
- **PR** #28824: (*rallytime*) Back-port #28778 and #28820 to 2015.8
- **PR** #28803: (*jfindlay*) decode strings to utf-8
- **PR** #28782: (*rallytime*) Fixes to rabbitmq user state
- **PR** #28789: (*nmadhok*) Provide ability to enable/disable customization for newly create VMs using VMware salt-cloud driver
- **PR** #28768: (*mrosedale*) 2015.8
- **PR** #28772: (*rallytime*) rabbitmq.list_user_permissions returns a dict, not a list. Don't expect a list.

- **PR** #28774: (*rallytime*) Back-port #28725 to 2015.8
- **PR** #28775: (*rallytime*) Back-port #28740 to 2015.8
- **PR** #28755: (*rallytime*) Move most vmware driver list_* functions to use salt.utils.vmware functions
- **PR** #28744: (*jfindlay*) import gate elementtree
- **PR** #28758: (*jfindlay*) remove redundant logic in useradd execution module
- **PR** #28757: (*mbarrien*) Bug fix: pip command to not quote spaces in cmd line args
- **PR** #28764: (*multani*) Various documentation fixes
- **PR** #28752: (*aboe76*) Update openSUSE grain for tumbleweed
- **PR** #28713: (*hexedpackets*) Rename consul.list to consul.list_keys.
- **PR** #28719: (*jacobhammons*) removed dependencies info from docs
- **PR** #28709: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #28710: (*rallytime*) Pass kwargs correctly to _get_group from get_group_id
- **PR** #28698: (*rallytime*) Back-port #28530 to 2015.8
- **PR** #28700: (*rallytime*) Back-port #28679 to 2015.8
- **PR** #28695: (*s0undt3ch*) [2015.8] Update to latest bootstrap script v2015.11.09
- **PR** #28656: (*clarkperkins*) #28526 fixed yumpkg module issue with pkg.installed
- **PR** #28672: (*jfindlay*) add OS grain support for SuSE Leap
- **PR** #28673: (*jfindlay*) add hidden_opts to mount.mounted
- **PR** #28667: (*cro*) saltutil.sync_all should sync proxymodules as well as the rest.
- **PR** #28665: (*jfindlay*) fixes to windows execution and state modules
- **PR** #28660: (*techhat*) Don't sign empty regions
- **PR** #28632: (*terminalmage*) Fixes/improvements to pkgbuild state/modules
- **PR** #28658: (*techhat*) Remove _pkgdb_fun() references
- **PR** #28653: (*rallytime*) Provide possible parameters for boto_rds.present engine values
- **PR** #28649: (*bdrung*) Fix OS related grains on Debian
- **PR** #28646: (*rallytime*) Back-port #28614 to 2015.8
- **PR** #28647: (*rallytime*) Back-port #28624 to 2015.8
- **PR** #28648: (*rallytime*) Merge branch `2015.5' into `2015.8'
- **PR** #28638: (*anlutro*) Salt-SSH: Return more concise error when SSH command fails
- **PR** #28644: (*pass-by-value*) Make sure versionchanged is correct
- **PR** #28615: (*The-Loeki*) Fixes to FreeBSD pkg
- **PR** #28613: (*cachedout*) Add facility to deepcopy bound methods in Py2.6 and apply to grains
- **PR** #28612: (*rallytime*) Remove unsupported storage_type argument for parity with boto_rds module
- **PR** #28611: (*rallytime*) [2015.8] Be explicit about salt.utils.vmware function calls
- **PR** #28610: (*pass-by-value*) Lxc config additions
- **PR** #28602: (*nasenbaer13*) Allow setting of custom dimensions in asg alarm specification

- **PR** #28596: (*rallytime*) Merge branch `2015.5' into `2015.8'
- **PR** #28593: (*blueyed*) doc: fix typo with salt.states.file: s/preseve/preserve/
- **PR** #28578: (*twangboy*) Fixed the script… something got broke…
- **PR** #28579: (*jfindlay*) fix __virtual__ returns: tls,uptime mods
- **PR** #28584: (*rallytime*) If AssociatePublicIpAddress is set to True, don't auto-assign eip.
- **PR** #28576: (*jacksontj*) Only encode the zmq message once
- **PR** #28587: (*cachedout*) Reset yaml rendering hooks to avoid leaks
- **PR** #28581: (*basepi*) Revert b4875e585a165482c4c1ddc8987d76b0a71ef1b0
- **PR** #28573: (*jacksontj*) Add *body* to salt.utils.http.query returns
- **PR** #28564: (*s0undt3ch*) [2015.8] Update to latest bootstrap script v2015.11.04
- **PR** #28561: (*Oro*) Issue #28527 boto_rds.create does not work
- **PR** #28560: (*bdrung*) Fix various typos
- **PR** #28550: (*jfindlay*) check timedatectl errno and return stdout on failure
- **PR** #28545: (*jfindlay*) pass on concurrent create of jid_dir in local_cache
- **PR** #28544: (*rallytime*) Start moving some vmware.py cloud funcs to utils/vmware.py
- **PR** #28543: (*gtmanfred*) clean up changes for pkg.uptodate and supervisord.dead
- **PR** #28538: (*jfindlay*) decode path and url to utf-8 in url.create
- **PR** #28533: (*jfindlay*) decode highstate error messages to utf-8
- **PR** #28547: (*nmadhok*) [Backport] [2015.8] Tasks can be in queued state instead of running
- **PR** #28535: (*techhat*) Fail gracefully if 169.254* isn't available
- **PR** #28536: (*cro*) Default configuration file for proxy minions.
- **PR** #28534: (*rallytime*) Add versionadded directive for vpc_name arg in boto_secgroup.present
- **PR** #28516: (*rallytime*) Back-port #28489 to 2015.8
- **PR** #28506: (*basepi*) [2015.8] Log minion list for all rosters, at debug level
- **PR** #28514: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #28502: (*cachedout*) Lint #28427
- **PR** #28464: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #28486: (*rallytime*) Back-port #26945 to 2015.8
- **PR** #28472: (*gtmanfred*) overwrite more than one value with names
- **PR** #28493: (*rallytime*) Back-port #28492 to 2015.8
- **PR** #28494: (*whiteinge*) Fix filter_by passing incorrect parameters to match functions
- **PR** #28491: (*rallytime*) Back-port #28388 to 2015.8
- **PR** #28465: (*twangboy*) Fix #12363: Password Expiration in Windows
- **PR** #28485: (*nasenbaer13*) Fix invalid usage of _get_conn causing #28484
- **PR** #28454: (*sdm24*) Fixed nodegroup doc formatting to correctly link to pillar_opts in the master config
- **PR** #28487: (*cachedout*) Lint 28456

- **PR** #28457: (*sdm24*) Clarified comments for grains/core.py for ip_interfaces, ip4_interfac...
- **PR** #28473: (*anlutro*) Show check_cmd output on failure
- **PR** #28460: (*jtand*) Skipped wipefs test if wipefs does not exist on OS
- **PR** #28426: (*terminalmage*) pkgbuild.built: make template engine optional
- **PR** #28422: (*cachedout*) Handle windows logging on thread_multi [WIP]
- **PR** #28425: (*twangboy*) Fix #13513 - Reflection
- **PR** #28417: (*rallytime*) Add note about azure sdk version to getting started docs
- **PR** #28410: (*jacksontj*) Add retries to the zeromq.AsyncReqMessageClient
- **PR** #28404: (*rallytime*) Back-port #28395 to 2015.8
- **PR** #28405: (*opdude*) Detect legacy versions of chocolatey correctly
- **PR** #28187: (*sjansen*) fix at.present
- **PR** #28375: (*merll*) Merge pillar includes correctly
- **PR** #28376: (*ryan-lane*) Support update of route53 records with multiple values
- **PR** #28377: (*terminalmage*) Deprecate `always' in favor of `force' in pkgbuild.built
- **PR** #28380: (*cro*) Add missing call for service provider
- **PR** #28348: (*jfindlay*) salt.utils.alias informs user they are using a renamed function
- **PR** #28364: (*jtand*) In CentOS 5 the .split() causes a stacktrace.
- **PR** #28361: (*rallytime*) Back-port #28087 to 2015.8
- **PR** #28360: (*multani*) Various documentation fixes
- **PR** #28370: (*rallytime*) Back-port #28276 to 2015.8
- **PR** #28353: (*merll*) Consider each pillar match only once.
- **PR** #28334: (*anlutro*) iptables needs -m comment for --comment to work
- **PR** #28340: (*jfindlay*) sdecode file and dir lists in fileclient
- **PR** #28344: (*ryan-lane*) Fix iptables state for non-filter tables
- **PR** #28343: (*rallytime*) Back-port #28342 to 2015.8
- **PR** #28330: (*rallytime*) Back-port #28305 to 2015.8
- **PR** #28270: (*rallytime*) Refactor RabbitMQ Plugin State to correctly use test=true and format errors
- **PR** #28269: (*rallytime*) Refactor rabbitmq_user state to use test=True correctly
- **PR** #28299: (*rallytime*) Add test for availability_zone check to boto_vpc_tests
- **PR** #28306: (*sdm24*) Updated the Nodegroup docs to include how to target nodegroups in SLS Jinja
- **PR** #28308: (*rallytime*) Firewalld state services should use --add-service, not --new-service
- **PR** #28302: (*DmitryKuzmenko*) Always close socket even if there is no stream.
- **PR** #28282: (*keesbos*) Fix for __env__ in legacy git_pillar
- **PR** #28258: (*pass-by-value*) Add service module for ssh proxy example
- **PR** #28294: (*bechtoldt*) correct a bad default value in http utility
- **PR** #28185: (*jtand*) Added single package return for latest_version, fixed other bug.

- **PR** #28297: (*cachedout*) Lint fix proxy junos
- **PR** #28210: (*terminalmage*) Fix for ext_pillar being compiled twice in legacy git_pillar code
- **PR** #28265: (*jfindlay*) fix blockdev execution and state modules
- **PR** #28266: (*rallytime*) Back-port #28260 to 2015.8
- **PR** #28253: (*rallytime*) Back-port #28063 to 2015.8
- **PR** #28231: (*rallytime*) Make sure we're compairing strings when getting images in the DO driver
- **PR** #28224: (*techhat*) Optimize create_repo for large packages
- **PR** #28214: (*rallytime*) Don't stacktrace if invalid credentials are passed to boto_route53 state
- **PR** #28228: (*rallytime*) Back-port #27562 to 2015.8
- **PR** #28232: (*rallytime*) Add documentation to supply the ssh_username: freebsd config to DO docs
- **PR** #28198: (*jacobhammons*) Added note regarding missing spm exe on Debian/Ubuntu
- **PR** #28182: (*erchn*) Some fixes for nova driver for Rackspace
- **PR** #28181: (*rallytime*) Revamp firewalld state to be more stateful.
- **PR** #28176: (*cro*) Add ping function
- **PR** #28167: (*The-Loeki*) file.serialize needs to add a final newline to serialized files
- **PR** #28168: (*rallytime*) Make sure availability zone gets passed in boto_vpc module when creating subnet
- **PR** #28148: (*basepi*) [2015.8] Only expand nodegroups to lists if there is a nested nodegroup
- **PR** #28155: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #28149: (*pass-by-value*) Add clarification to cloud profile doc about host
- **PR** #28146: (*cachedout*) Lint dracr.py
- **PR** #28141: (*rallytime*) Don't use RAM for root disk size in linode.py
- **PR** #28143: (*jtand*) Removed blank line at end of chassis.py
- **PR** #28021: (*blueyed*) Handle includes in *include_config* recursively
- **PR** #28095: (*rallytime*) Back-port #28001 to 2015.8
- **PR** #28096: (*rallytime*) Back-port #28061 to 2015.8
- **PR** #28139: (*rallytime*) Back-port #28103 to 2015.8
- **PR** #28098: (*jacksontj*) For all multi-part messages, check the headers. If the header is not ...
- **PR** #28134: (*bernieke*) fix unicode pillar values #3436
- **PR** #28076: (*redmcg*) Replace option `i' with an explicit queryformat
- **PR** #28119: (*jacksontj*) Check if the remote exists before casting to a string.
- **PR** #28105: (*jfindlay*) add reason for not loading localemod
- **PR** #28108: (*cachedout*) Set logfile permsissions correctly
- **PR** #27922: (*cro*) WIP States/Modules for managing Dell FX2 chassis via salt-proxy
- **PR** #28104: (*pass-by-value*) Add documentation for proxy minion ssh
- **PR** #28020: (*DmitryKuzmenko*) LazyLoader deepcopy fix.
- **PR** #27933: (*eliasp*) Provide all git pillar dirs in *opts[pillar_roots]*

- **PR** #28013: (*rallytime*) Back-port #27891 to 2015.8
- **PR** #28018: (*rallytime*) Add example to Writing Grains of how grains can be loaded twice
- **PR** #28084: (*cachedout*) #28069 with lint
- **PR** #28079: (*The-Loeki*) Fix for trace dump on failing imports for win32com & pythoncom 4 win_task
- **PR** #28081: (*The-Loeki*) fix for glance state trace error on import failure
- **PR** #28066: (*jacksontj*) Use the generic *text* attribute, not .body of the handler
- **PR** #28019: (*rallytime*) Clean up version added and deprecated msgs to be accurate
- **PR** #28058: (*rallytime*) Back-port #28041 to 2015.8
- **PR** #28055: (*rallytime*) Back-port #28043 to 2015.8
- **PR** #28046: (*pass-by-value*) Add pkg install and remove functions
- **PR** #28050: (*ryan-lane*) Use a better method for checking dynamodb table existence
- **PR** #28042: (*jfindlay*) fix repo path in ubuntu installation documentation
- **PR** #28033: (*twangboy*) Fixed win_useradd.py
- **PR** #28027: (*cro*) Make ssh conn persistent.
- **PR** #28029: (*jacobhammons*) Updated release notes with additional CVE information
- **PR** #28022: (*jacobhammons*) Updated Debian and Ubuntu repo paths with new structure for 2015.8.1
- **PR** #27983: (*rallytime*) Pip state run result should be False, not None, if installation error occurs.
- **PR** #27991: (*twangboy*) Fix for #20678
- **PR** #27997: (*rallytime*) Remove note about pip bug with pip v1 vs pip v2 return codes
- **PR** #27994: (*jtand*) Fix schedule_test failure
- **PR** #27992: (*cachedout*) Make load beacon config into list
- **PR** #28003: (*twangboy*) Fix #26336
- **PR** #27984: (*rallytime*) Versionadded for clean_file option for pkgrepo
- **PR** #27989: (*ryan-lane*) Do not try to remove the main route table association
- **PR** #27982: (*pass-by-value*) Add example for salt-proxy over SSH
- **PR** #27985: (*jacobhammons*) Changed current release to 8.1 and added CVEs to release notes
- **PR** #27979: (*cachedout*) Fix regression with key whitespace
- **PR** #27977: (*cachedout*) Decode unicode names in fileclient/server
- **PR** #27981: (*jtand*) Fixed trailing whitespace lint
- **PR** #27969: (*jeffreyctang*) fix parse of { on next line
- **PR** #27978: (*terminalmage*) Add note about dockerng.inspect_image usage
- **PR** #27955: (*pass-by-value*) Bp 27868
- **PR** #27953: (*The-Loeki*) Fix CloudStack cloud for new `driver' syntax
- **PR** #27965: (*ryan-lane*) Fail in boto_asg.present if alarms fail
- **PR** #27958: (*twangboy*) Added new functionality to win_task.py
- **PR** #27959: (*techhat*) Change __opts__ to self.opts

- **PR** #27943: (*rallytime*) Back-port #27910 to 2015.8
- **PR** #27944: (*rallytime*) Back-port #27909 to 2015.8
- **PR** #27946: (*jtand*) Changed grain to look at osmajorrelease instead of osrelease
- **PR** #27914: (*rallytime*) Use eipalloc instead of eni in EC2 interface properties example
- **PR** #27926: (*rallytime*) Back-port #27905 to 2015.8
- **PR** #27927: (*ryan-lane*) Do not manage ingress or egress rules if set to None
- **PR** #27928: (*rallytime*) Back-port #27908 to 2015.8
- **PR** #27676: (*ticosax*) [dockerng] WIP No more runtime args passed to docker.start()
- **PR** #27885: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #27882: (*twangboy*) Created win_task.py module
- **PR** #27802: (*terminalmage*) Correct warning logging when update lock is present for git_pillar/winrepo, add runner function for clearing git_pillar/winrepo locks
- **PR** #27886: (*rallytime*) Handle group lists as well as comma-separated group strings.
- **PR** #27746: (*anlutro*) timezone module: handle timedatectl errors
- **PR** #27816: (*anlutro*) Make system.reboot use *shutdown -r* when available
- **PR** #27874: (*rallytime*) Add mention of Periodic Table naming scheme to deprecation docs
- **PR** #27883: (*terminalmage*) Work around --is-ancestor not being present in git-merge-base before git 1.8.0
- **PR** #27877: (*rallytime*) Back-port #27774 to 2015.8
- **PR** #27878: (*rallytime*) Use apache2ctl binary on SUSE in apache module
- **PR** #27879: (*cro*) Add docs for 2015.8.2+ changes to proxies
- **PR** #27731: (*cro*) Add __proxy__ to replace opts['proxymodule']
- **PR** #27745: (*anlutro*) Add pip_upgrade arg to virtualenv.managed state
- **PR** #27809: (*ticosax*) [dockerng] Remove dockerng.ps caching
- **PR** #27859: (*ticosax*) [dockerng] Clarify doc port bindings
- **PR** #27748: (*multani*) Fix #8646
- **PR** #27850: (*rallytime*) Back-port #27722 to 2015.8
- **PR** #27851: (*rallytime*) Back-port #27771 to 2015.8
- **PR** #27833: (*jfindlay*) decode path before string ops in fileclient
- **PR** #27837: (*jfindlay*) reverse truth in python_shell documentation
- **PR** #27860: (*flavio*) Fix OS related grains on openSUSE and SUSE Linux Enterprise
- **PR** #27768: (*rallytime*) Clean up bootstrap function to be slightly cleaner
- **PR** #27797: (*isbm*) Zypper module clusterfix
- **PR** #27849: (*rallytime*) Don't require a size parameter for proxmox profiles
- **PR** #27827: (*techhat*) Add additional error checking to SPM
- **PR** #27826: (*martinhoefling*) Fixes #27825
- **PR** #27824: (*techhat*) Update Azure errors

- **PR** #27795: (*eguven*) better change reporting for postgres_user groups
- **PR** #27799: (*terminalmage*) Fix usage of identity file in git.latest
- **PR** #27717: (*pass-by-value*) Proxy beacon example
- **PR** #27793: (*anlutro*) update code that changes log level of salt-ssh shim command
- **PR** #27761: (*terminalmage*) Merge git pillar data instead of using dict.update()
- **PR** #27741: (*ticosax*) [dockerng] pass filters argument to dockerng.ps
- **PR** #27760: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #27757: (*jfindlay*) fix virtual fcn return doc indentation
- **PR** #27754: (*rallytime*) Change test.nop version directive to 2015.8.1
- **PR** #27734: (*jacobhammons*) Updated saltstack2 theme to add SaltConf16 banner
- **PR** #27727: (*rallytime*) Merge #27719 w/pylint fix
- **PR** #27724: (*jfindlay*) update __virtual__ return documentation
- **PR** #27725: (*basepi*) Fix global injection for state cross calls
- **PR** #27628: (*ticosax*) [dockerng] Add support of *labels* parameter for dockerng
- **PR** #27704: (*jacobhammons*) Update compound matcher docs to clarify the usage of alternate delimi…
- **PR** #27705: (*rallytime*) Merge #27602 with final pylint fix
- **PR** #27691: (*notpeter*) Faster timeout (3s vs 2min) for instance metadata lookups. #13850.
- **PR** #27696: (*blueyed*) loader.proxy: call *_modules_dirs* only once
- **PR** #27630: (*ticosax*) Expose container_id in mine.get_docker
- **PR** #27600: (*blueyed*) dockerng: use docker.version=auto by default
- **PR** #27689: (*rallytime*) Merge #27448 with test fixes
- **PR** #27693: (*jacobhammons*) initial engines topic, updates to windows repo docs
- **PR** #27601: (*blueyed*) dockerng: handle None in container.Names
- **PR** #27596: (*blueyed*) gitfs: fix UnboundLocalError for `msg'
- **PR** #27651: (*eliasp*) Check for existence of `subnetId' key in subnet dict
- **PR** #27639: (*rallytime*) Docement version added for new artifactory options
- **PR** #27677: (*rallytime*) Back-port #27675 to 2015.8
- **PR** #27637: (*rallytime*) Back-port #27604 to 2015.8
- **PR** #27657: (*garethgreenaway*) Fix to pkg state module
- **PR** #27632: (*rallytime*) Back-port #27539 to 2015.8
- **PR** #27633: (*rallytime*) Back-port #27559 to 2015.8
- **PR** #27579: (*rallytime*) Change boto_route53 region default to `universal' to avoid problems with boto library
- **PR** #27581: (*tkwilliams*) Add support for `vpc_name' tag in boto_secgroup module and state
- **PR** #27624: (*nasenbaer13*) Wait for sync is not passed to boto_route53 state
- **PR** #27614: (*blueyed*) doc: minor fixes to doc and comments
- **PR** #27627: (*eyj*) Fix crash in boto_asg.get_instances if the requested attribute is None

- **PR** #27616: (*jacobhammons*) Updated windows software repository docs
- **PR** #27569: (*lomeroe*) boto_vpc.get_subnet_association now returns a dict w/key of vpc_id, a...
- **PR** #27567: (*whiteinge*) Use getattr to fetch psutil.version_info
- **PR** #27583: (*tkwilliams*) Fixup zypper module
- **PR** #27597: (*blueyed*) gitfs: remove unused variable ``bad_per_remote_conf''
- **PR** #27585: (*ryan-lane*) Fix undefined variable in cron state module

20.2.30 Salt 2015.8.4 Release Notes

Known Issues

`in_` requisites (issue 30820)

This issue affects all users targeting an explicit `-name: <name>` with a `_in` requisite (such as `watch_in` or `require_in`). If you are not using explicit `-name: <name>` arguments, are targeting with the state ID instead of the name, or are not using `_in` requisites, then you should be safe to upgrade to 2015.8.4.

This issue is resolved in the *2015.8.5* release.

Security Fix

CVE-2016-1866: Improper handling of clear messages on the minion, which could result in executing commands not sent by the master.

This issue affects only the 2015.8.x releases of Salt. In order for an attacker to use this attack vector, they would have to execute a successful attack on an existing TCP connection between minion and master on the pub port. It does not allow an external attacker to obtain the shared secret or decrypt any encrypted traffic between minion and master. Thank you to Sebastian Krahmer <krahmer@suse.com> for bringing this issue to our attention.

We recommend everyone upgrade to 2015.8.4 as soon as possible.

Core Changes

- **PR** #28994: *timcharper* Salt S3 module has learned how to assume IAM roles
- Added option `mock=True` for *`state.sls`* and *`state.highstate`*. This allows the salt state compiler to process sls data in a state run without actually calling the state functions, thus providing feedback on the validity of the arguments used for the functions beyond the preprocessing validation provided by `state.show_sls` (issue 30118 and issue 30189).

```
salt '*' state.sls core,edit.vim mock=True
salt '*' state.highstate mock=True
salt '*' state.apply edit.vim mock=True
```

Changes for v2015.8.3..v2015.8.4

Total Merges: **320**

Changes:

- **PR** #30613: (*basepi*) Fix minion/syndic clearfuncs
- **PR** #30609: (*seanjnkns*) Fix documentation for pillar_merge_lists which default is False, not ...
- **PR** #30584: (*julianbrost*) file.line state: add missing colon in docstring
- **PR** #30589: (*terminalmage*) Merge 2015.5 into 2015.8
- **PR** #30599: (*multani*) Documentation formatting fixes
- **PR** #30554: (*rallytime*) Make the salt-cloud actions output more verbose and helpful
- **PR** #30549: (*techhat*) Salt Virt cleanup
- **PR** #30553: (*techhat*) AWS: Support 17-character IDs
- **PR** #30532: (*whiteinge*) Add execution module for working in sls files
- **PR** #30529: (*terminalmage*) Merge 2015.5 into 2015.8
- **PR** #30526: (*twangboy*) Added FlushKey to make sure it's changes are saved to disk
- **PR** #30521: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #30485: (*jtand*) Updated pip_state to work with pip 8.0 on 2015.8
- **PR** #30494: (*isbm*) Zypper: info_installed — `errors' flag change to type `boolean'
- **PR** #30506: (*jacksontj*) Properly remove newlines after reading the file
- **PR** #30508: (*rallytime*) Fix Linode driver cloning functionality
- **PR** #30522: (*terminalmage*) Update git.list_worktree tests to reflect new return data
- **PR** #30483: (*borgstrom*) Pyobjects recursive import support (for 2015.8)
- **PR** #30491: (*jacksontj*) Add multi-IP support to network state
- **PR** #30496: (*anlutro*) Fix KeyError when adding ignored pillars
- **PR** #30359: (*kingsquirrel152*) Removes suspected copy/paste error for zmq_filtering functionailty
- **PR** #30448: (*cournape*) Fix osx scripts location
- **PR** #30457: (*rallytime*) Remove fsutils references from modules list
- **PR** #30453: (*rallytime*) Make sure private AND public IPs are listed for Linode driver
- **PR** #30458: (*rallytime*) Back-port #30062 to 2015.8
- **PR** #30468: (*timcharper*) make note of s3 role assumption in upcoming changelog
- **PR** #30470: (*whiteinge*) Add example of the match_dict format to accept_dict wheel function
- **PR** #30450: (*gtmanfred*) fix extension loading in novaclient
- **PR** #30212: (*abednarik*) Fix incorrect file permissions in file.line
- **PR** #29947: (*jfindlay*) fileclient: decode file list from master
- **PR** #30363: (*terminalmage*) Use native ``list'' subcommand to list git worktrees
- **PR** #30445: (*jtand*) Boto uses False for is_default instead of None
- **PR** #30406: (*frioux*) Add an example of how to use file.managed/check_cmd
- **PR** #30424: (*isbm*) Check if byte strings are properly encoded in UTF-8
- **PR** #30405: (*jtand*) Updated glusterfs.py for python2.6 compatibility.

- **PR** #30396: (*pass-by-value*) Remove hardcoded val
- **PR** #30391: (*jtand*) Added else statements
- **PR** #30375: (*rallytime*) Wrap formatted log statements with six.u() in cloud/__init__.py
- **PR** #30384: (*isbm*) Bugfix: info_available does not work correctly on SLE 11 series
- **PR** #30376: (*pritambaral*) Fix FLO_DIR path in 2015.8
- **PR** #30389: (*jtand*) Older versions of ipset don't support comments
- **PR** #30373: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #30372: (*jacobhammons*) Updated man pages for 2015.8.4, updated copyright to 2016
- **PR** #30370: (*rallytime*) Remove incomplete function
- **PR** #30366: (*rallytime*) Back-port #28702 to 2015.8
- **PR** #30361: (*cro*) Flip the sense of the test for proxymodule imports, add more fns for esxi proxy
- **PR** #30267: (*isbm*) Fix RPM issues with the date/time and add package attributes filtering
- **PR** #30360: (*jfindlay*) file.remove, file.absent: mention recursive dir removal
- **PR** #30221: (*mbarrien*) No rolcatupdate for user_exist in Postgres>=9.5 #26845
- **PR** #30358: (*terminalmage*) Add libgit2 version to versions-report
- **PR** #30346: (*pass-by-value*) Prevent orphaned volumes
- **PR** #30349: (*rallytime*) Back-port #30347 to 2015.8
- **PR** #30354: (*anlutro*) Make sure all ignore_missing SLSes are caught
- **PR** #30356: (*nmadhok*) Adding code author
- **PR** #30340: (*jtand*) Updated seed_test.py for changes made to seed module
- **PR** #30339: (*jfindlay*) Backport #26511
- **PR** #30343: (*rallytime*) Fix 2015.8 from incomplete back-port
- **PR** #30342: (*eliasp*) Correct whitespace placement in error message
- **PR** #30308: (*rallytime*) Back-port #30257 to 2015.8
- **PR** #30187: (*rallytime*) Back-port #27606 to 2015.8
- **PR** #30223: (*serge-p*) adding support for DragonFly BSD
- **PR** #30238: (*rallytime*) Reinit crypto before calling RSA.generate when generating keys.
- **PR** #30246: (*dmacvicar*) Add missing return data to scheduled jobs (#24237)
- **PR** #30292: (*thegoodduke*) ipset: fix test=true & add comment for every entry
- **PR** #30275: (*abednarik*) Add permanent argument in firewalld.
- **PR** #30328: (*cachedout*) Fix file test
- **PR** #30310: (*pass-by-value*) Empty bucket fix
- **PR** #30211: (*techhat*) Execute choot on the correct path
- **PR** #30309: (*rallytime*) Back-port #30304 to 2015.8
- **PR** #30278: (*nmadhok*) If datacenter is specified in the config, then look for managed objects under it
- **PR** #30305: (*jacobhammons*) Changed examples to use the ``example.com'' domain instead of ``mycompan...

- **PR** #30249: (*mpreziuso*) Fixes performance and timeout issues on win_pkg.install
- **PR** #30217: (*pass-by-value*) Make sure cloud actions can be called via salt run
- **PR** #30268: (*terminalmage*) Optimize file_tree ext_pillar and update file.managed to allow for binary contents
- **PR** #30245: (*rallytime*) Boto secgroup/iam_role: Add note stating us-east-1 is default region
- **PR** #30299: (*rallytime*) ESXi Proxy minions states are located at salt.states.esxi, not vsphere.
- **PR** #30202: (*opdude*) Fixed the periodic call to beacons
- **PR** #30303: (*jacobhammons*) Changed notes to indicate that functions are matched using regular ex…
- **PR** #30284: (*terminalmage*) salt.utils.gitfs: Fix Dulwich env detection and submodule handling
- **PR** #30280: (*jfindlay*) add state mocking to release notes
- **PR** #30273: (*rallytime*) Back-port #30121 to 2015.8
- **PR** #30301: (*cachedout*) Accept whatever comes into hightstate mock for state tests
- **PR** #30282: (*cachedout*) Fix file.append logic
- **PR** #30289: (*cro*) Fix problems with targeting proxies by grains
- **PR** #30293: (*cro*) Ensure we don't log stuff we shouldn't
- **PR** #30279: (*cachedout*) Allow modules to be packed into boto utils
- **PR** #30186: (*rallytime*) Update CLI Examples in boto_ec2 module to reflect correct arg/kwarg positioning
- **PR** #30156: (*abednarik*) Add option in file.append to ignore_whitespace.
- **PR** #30189: (*rallytime*) Back-port #30185 to 2015.8
- **PR** #30215: (*jacobhammons*) Assorted doc bug fixes
- **PR** #30206: (*cachedout*) Revert ``Fix incorrect file permissions in file.line''
- **PR** #30190: (*jacobhammons*) Updated doc site banners
- **PR** #30180: (*jfindlay*) modules.x509._dec2hex: add fmt index for 2.6 compat
- **PR** #30179: (*terminalmage*) Backport #26962 to 2015.8 branch
- **PR** #29693: (*abednarik*) Handle missing source file in ssh_auth.
- **PR** #30155: (*rallytime*) Update boto_secgroup and boto_iam_role docs to only use region OR profile
- **PR** #30158: (*rallytime*) Move _option(value) calls to __salt__['config.option'] in boto utils
- **PR** #30160: (*dmurphy18*) Fix parsing disk usage for line with no number and AIX values in Kilos
- **PR** #30162: (*rallytime*) Update list_present and append grains state function docs to be more clear.
- **PR** #30163: (*rallytime*) Add warning about using ``=" in file.line function
- **PR** #30164: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #30168: (*abednarik*) Fix incorrect file permissions in file.line
- **PR** #30154: (*Oro*) Fix file serialize on windows
- **PR** #30144: (*rallytime*) Added generic ESXCLI command ability to ESXi Proxy Minion
- **PR** #30142: (*terminalmage*) Fix dockerng.push, and allow for multiple images
- **PR** #30075: (*joejulian*) Convert glusterfs module to use xml
- **PR** #30129: (*optix2000*) Clean up _uptodate() in git state

- **PR** #30139: (*rallytime*) Back-port #29589 to 2015.8
- **PR** #30124: (*abednarik*) Update regex to detect ip alias in OpenBSD.
- **PR** #30133: (*stanislavb*) Fix typo in gpgkey URL
- **PR** #30126: (*stanislavb*) Log S3 API error message
- **PR** #30128: (*oeuftete*) Log retryable transport errors as warnings
- **PR** #30096: (*cachedout*) Add rm_special to crontab module
- **PR** #30106: (*techhat*) Ensure last dir
- **PR** #30101: (*gtmanfred*) fix bug where nova driver exits with no adminPass
- **PR** #30090: (*techhat*) Add argument to isdir()
- **PR** #30094: (*rallytime*) Fix doc formatting for cloud.create example in module.py state
- **PR** #30095: (*rallytime*) Add the list_nodes_select function to linode driver
- **PR** #30082: (*abednarik*) Fixed saltversioninfo grain return
- **PR** #30084: (*rallytime*) Back-port #29987 to 2015.8
- **PR** #30071: (*rallytime*) Merge branch `2015.5' into `2015.8'
- **PR** #30067: (*ryan-lane*) Pass in kwargs to boto_secgroup.convert_to_group_ids explicitly
- **PR** #30069: (*techhat*) Ensure that pki_dir exists
- **PR** #30064: (*rallytime*) Add Syndic documentation to miscellaneous Salt Cloud config options
- **PR** #30049: (*rallytime*) Add some more unit tests for the vsphere execution module
- **PR** #30060: (*rallytime*) Back-port #27104 to 2015.8
- **PR** #30048: (*jacobhammons*) Remove internal APIs from rest_cherrypy docs.
- **PR** #30043: (*rallytime*) Be explicit about importing from salt.utils.jinja to avoid circular imports
- **PR** #30038: (*rallytime*) Back-port #30017 to 2015.8
- **PR** #30036: (*rallytime*) Back-port #29995 to 2015.8
- **PR** #30035: (*rallytime*) Back-port #29895 to 2015.8
- **PR** #30034: (*rallytime*) Back-port #29893 to 2015.8
- **PR** #30033: (*rallytime*) Back-port #29876 to 2015.8
- **PR** #30029: (*terminalmage*) git.latest: Fix handling of nonexistent branches
- **PR** #30016: (*anlutro*) Properly normalize locales in locale.gen_locale
- **PR** #30015: (*anlutro*) locale module: don't escape the slash in \n
- **PR** #30022: (*gqgunhed*) Two minor typos fixed
- **PR** #30026: (*anlutro*) states.at: fix wrong variable being used
- **PR** #29966: (*multani*) Fix bigip state/module documentation + serializers documentation
- **PR** #29904: (*twangboy*) Improvements to osx packaging scripts
- **PR** #29950: (*multani*) boto_iam: fix deletion of IAM users when using delete_keys=true
- **PR** #29937: (*multani*) Fix states.boto_iam group users
- **PR** #29934: (*multani*) Fix state.boto_iam virtual name

- **PR** #29943: (*cachedout*) Check args correctly in boto_rds
- **PR** #29924: (*gqgunhed*) fixed: uptime now working on non-US Windows
- **PR** #29883: (*serge-p*) fix for nfs mounts in _active_mounts_openbsd()
- **PR** #29894: (*techhat*) Support Saltfile in SPM
- **PR** #29856: (*rallytime*) Added some initial unit tests for the salt.modules.vsphere.py file
- **PR** #29855: (*rallytime*) Back-port #29740 to 2015.8
- **PR** #29890: (*multani*) Various documentation fixes
- **PR** #29850: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #29811: (*anlutro*) influxdb: add retention policy module functions
- **PR** #29814: (*basepi*) [2015.8][Windows] Fix multi-master on windows
- **PR** #29819: (*rallytime*) Add esxi module and state to docs build
- **PR** #29832: (*jleimbach*) Fixed typo in order to use the keyboard module for RHEL without systemd
- **PR** #29803: (*rallytime*) Add vSphere module to doc ref module tree
- **PR** #29767: (*abednarik*) Hosts file update in mod_hostname.
- **PR** #29772: (*terminalmage*) pygit2: skip submodules when traversing tree
- **PR** #29765: (*gtmanfred*) allow nova driver to be boot from volume
- **PR** #29773: (*l2ol33rt*) Append missing wget in debian installation guide
- **PR** #29800: (*rallytime*) Back-port #29769 to 2015.8
- **PR** #29775: (*paulnivin*) Change listen requisite resolution from name to ID declaration
- **PR** #29754: (*rallytime*) Back-port #29719 to 2015.8
- **PR** #29713: (*The-Loeki*) Pillar-based cloud providers still forcing use of deprecated `provider'
- **PR** #29729: (*rallytime*) Further clarifications on ``unless'' and ``onlyif'' requisites.
- **PR** #29737: (*akissa*) fix pillar sqlite3 documentation examples
- **PR** #29743: (*akissa*) fix pillar sqlite not honouring config options
- **PR** #29723: (*rallytime*) Clarify db_user and db_password kwargs for postgres_user.present state function
- **PR** #29722: (*rallytime*) Link ``stateful'' kwargs to definition of what ``stateful'' means for cmd state.
- **PR** #29724: (*rallytime*) Add examples of using multiple matching levels to Pillar docs
- **PR** #29726: (*cachedout*) Disable some boto tests per resolution of moto issue
- **PR** #29708: (*lagesag*) Fix test=True for file.directory with recurse ignore_files/ignore_dirs.
- **PR** #29642: (*cachedout*) Correctly restart daemonized minions on failure
- **PR** #29599: (*cachedout*) Clean up minion shutdown
- **PR** #29675: (*clinta*) allow returning all refs
- **PR** #29683: (*rallytime*) Catch more specific error to pass the error message through elegantly.
- **PR** #29687: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #29681: (*clinta*) fix bare/mirror in git.latest
- **PR** #29644: (*rallytime*) Fixed a couple more ESXi proxy minion bugs

- **PR** #29645: (*rallytime*) Back-port #29558 to 2015.8
- **PR** #29632: (*jfindlay*) reduce severity of tls module __virtual__ logging
- **PR** #29606: (*abednarik*) Fixed duplicate mtu entry in RedHat 7 network configuration.
- **PR** #29613: (*rallytime*) Various ESXi Proxy Minion Bug Fixes
- **PR** #29628: (*DmitryKuzmenko*) Don't create io_loop before fork
- **PR** #29609: (*basepi*) [2015.8][salt-ssh] Add ability to set salt-ssh command umask in roster
- **PR** #29603: (*basepi*) Fix orchestration failure-checking
- **PR** #29597: (*terminalmage*) dockerng: Prevent exception when API response contains empty dictionary
- **PR** #29596: (*rallytime*) Back-port #29587 to 2015.8
- **PR** #29588: (*rallytime*) Added ESXi Proxy Minion Tutorial
- **PR** #29572: (*gtmanfred*) [nova] use old discover_extensions if available
- **PR** #29545: (*terminalmage*) git.latest: init submodules if not yet initialized
- **PR** #29548: (*rallytime*) Back-port #29449 to 2015.8
- **PR** #29547: (*rallytime*) Refactored ESXCLI-based functions to accept a list of esxi_hosts
- **PR** #29563: (*anlutro*) Fix a call to deprecated method in python-influxdb
- **PR** #29565: (*bdrung*) Fix typos and missing release note
- **PR** #29540: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #29499: (*rallytime*) Initial commit of ESXi Proxy Minion
- **PR** #29526: (*jfindlay*) 2015.8.2 notes: add note about not being released
- **PR** #29531: (*jfindlay*) grains.core: handle undefined variable
- **PR** #29538: (*basepi*) [2015.8] [salt-ssh] Remove umask around actual execution for salt-ssh
- **PR** #29505: (*rallytime*) Update boto_rds state docs to include funky yaml syntax for ``tags'' option.
- **PR** #29513: (*bdrung*) Drop obsolete syslog.target from systemd services
- **PR** #29500: (*rallytime*) Back-port #29467 to 2015.8
- **PR** #29463: (*abednarik*) Add **kwargs to debconf.set.
- **PR** #29399: (*jfindlay*) modules.status: add human_readable option to uptime
- **PR** #29433: (*cro*) Files for building .pkg files for MacOS X
- **PR** #29455: (*jfindlay*) modules.nova.__init__: do not return `None`
- **PR** #29454: (*jfindlay*) rh_service module __virtual__ return error messages
- **PR** #29476: (*tbaker57*) Doc fix - route_table_present needs subnet_names (not subnets) as a key
- **PR** #29487: (*rallytime*) Back-port #29450 to 2015.8
- **PR** #29441: (*rallytime*) Make sure docs line up with blade_idrac function specs
- **PR** #29440: (*rallytime*) Back-port #28925 to 2015.8
- **PR** #29435: (*galet*) Grains return wrong OS version and other OS related values for Oracle Linux
- **PR** #29430: (*rall0r*) Fix host.present state limitation
- **PR** #29417: (*jacobhammons*) Repo install updates

- **PR** #29402: (*techhat*) Add rate limiting to linode
- **PR** #29400: (*twangboy*) Fix #19332
- **PR** #29398: (*cachedout*) Lint 29288
- **PR** #29331: (*DmitryKuzmenko*) Bugfix - #29116 raet dns error
- **PR** #29390: (*jacobhammons*) updated version numbers in documentation
- **PR** #29381: (*nmadhok*) No need to deepcopy since six.iterkeys() creates a copy
- **PR** #29349: (*cro*) Fix mis-setting chassis names
- **PR** #29334: (*rallytime*) Back-port #29237 to 2015.8
- **PR** #29300: (*ticosax*) [dockerng] Add support for volume management in dockerng
- **PR** #29218: (*clan*) check service enable state in test mode
- **PR** #29315: (*jfindlay*) dev tutorial doc: fix markup errors
- **PR** #29317: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #29240: (*clan*) handle acl_type `[[d]efault:][user|group|mask|other]`
- **PR** #29305: (*lorengordon*) Add `file' as a source_hash proto
- **PR** #29272: (*jfindlay*) win_status module: handle 12 hour time in uptime
- **PR** #29289: (*terminalmage*) file.managed: Allow local file sources to use source_hash
- **PR** #29264: (*anlutro*) Prevent ssh_auth.absent from running when test=True
- **PR** #29277: (*terminalmage*) Update git_pillar runner to support new git ext_pillar config schema
- **PR** #29283: (*cachedout*) Single-quotes and use format
- **PR** #29139: (*thomaso-mirodin*) [salt-ssh] Add a range roster and range targeting options for the flat roster
- **PR** #29282: (*cachedout*) dev docs: add development tutorial
- **PR** #28994: (*timcharper*) add support to s3 for aws role assumption
- **PR** #29278: (*techhat*) Add verify_log to SPM
- **PR** #29067: (*jacksontj*) Fix infinite recursion in state compiler for prereq of SLSs
- **PR** #29207: (*jfindlay*) do not shadow ret function argument
- **PR** #29215: (*rallytime*) Back-port #29192 to 2015.8
- **PR** #29217: (*clan*) show duration only if state_output_profile is False
- **PR** #29221: (*ticosax*) [dokcerng] Docu network mode
- **PR** #29269: (*jfindlay*) win_status module: fix function names in docs
- **PR** #29213: (*rallytime*) Move _wait_for_task func from vmware cloud to vmware utils
- **PR** #29271: (*techhat*) Pass full path for digest (SPM)
- **PR** #29244: (*isbm*) List products consistently across all SLES systems
- **PR** #29255: (*garethgreenaway*) fixes to consul module
- **PR** #29208: (*whytewolf*) Glance more profile errors
- **PR** #29200: (*jfindlay*) mount state: unmount by device is optional
- **PR** #29205: (*trevor-h*) Fixes #29187 - using winrm on EC2

- **PR** #29170: (*cachedout*) Migrate pydsl tests to integration test suite
- **PR** #29198: (*jfindlay*) rh_ip module: only set the mtu once
- **PR** #29135: (*jfindlay*) ssh_known_hosts.present state: catch not found exc
- **PR** #29196: (*s0undt3ch*) We need novaclient imported to compare versions
- **PR** #29059: (*terminalmage*) Work around upstream pygit2 bug
- **PR** #29112: (*eliasp*) Prevent backtrace (KeyError) in *ssh_known_hosts.present* state
- **PR** #29178: (*whytewolf*) Profile not being passed to keystone.endpoint_get in _auth. so if a p...

20.2.31 Salt 2015.8.5 Release Notes

About this Release

Salt 2015.8.5 is identical to the 2015.8.4 release with the addition of a fix for issue 30820, fixed by **PR** #30833. For convenience, the content from the 2015.8.4 release notes is included below.

Known Issue in `boto_*` execution modules

This release contains an issue that causes the `boto_*` execution modules to display a `__salt__ not defined` error (issue 30300). This issue will be fixed in an upcoming release, but can be manually resolved by completing the following:

1. Download the `boto_*` execution modules that you would like to update from the 2015.8 branch of Salt. A complete list of affected modules with the specific changes is available in **PR** #30867.

   A simple way to get the updated modules is to download a zip file of the 2015.8 branch from GitHub. The updated modules are in the `salt\modules` directory.

2. Copy the `boto_*` modules to the `\srv\salt\_modules` directory on your Salt master.
3. Run the following command to sync these modules to all Salt minions:

```
salt '*' saltutil.sync_modules
```

2015.8.4 Release Notes

Security Fix

CVE-2016-1866: Improper handling of clear messages on the minion, which could result in executing commands not sent by the master.

This issue affects only the 2015.8.x releases of Salt. In order for an attacker to use this attack vector, they would have to execute a successful attack on an existing TCP connection between minion and master on the pub port. It does not allow an external attacker to obtain the shared secret or decrypt any encrypted traffic between minion and master. Thank you to Sebastian Krahmer <krahmer@suse.com> for bringing this issue to our attention.

We recommend everyone upgrade to 2015.8.4 as soon as possible.

Core Changes

- **PR** #28994: *timcharper* Salt S3 module has learned how to assume IAM roles
- Added option `mock=True` for `state.sls` and `state.highstate`. This allows the salt state compiler to process sls data in a state run without actually calling the state functions, thus providing feedback on the validity of the arguments used for the functions beyond the preprocessing validation provided by `state.show_sls` (issue 30118 and issue 30189).

```
salt '*' state.sls core,edit.vim mock=True
salt '*' state.highstate mock=True
salt '*' state.apply edit.vim mock=True
```

Changes for v2015.8.3..v2015.8.4

Total Merges: **320**

Changes:

- **PR** #30613: (*basepi*) Fix minion/syndic clearfuncs
- **PR** #30609: (*seanjnkns*) Fix documentation for pillar_merge_lists which default is False, not ...
- **PR** #30584: (*julianbrost*) file.line state: add missing colon in docstring
- **PR** #30589: (*terminalmage*) Merge 2015.5 into 2015.8
- **PR** #30599: (*multani*) Documentation formatting fixes
- **PR** #30554: (*rallytime*) Make the salt-cloud actions output more verbose and helpful
- **PR** #30549: (*techhat*) Salt Virt cleanup
- **PR** #30553: (*techhat*) AWS: Support 17-character IDs
- **PR** #30532: (*whiteinge*) Add execution module for working in sls files
- **PR** #30529: (*terminalmage*) Merge 2015.5 into 2015.8
- **PR** #30526: (*twangboy*) Added FlushKey to make sure it's changes are saved to disk
- **PR** #30521: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #30485: (*jtand*) Updated pip_state to work with pip 8.0 on 2015.8
- **PR** #30494: (*isbm*) Zypper: info_installed — `errors' flag change to type `boolean'
- **PR** #30506: (*jacksontj*) Properly remove newlines after reading the file
- **PR** #30508: (*rallytime*) Fix Linode driver cloning functionality
- **PR** #30522: (*terminalmage*) Update git.list_worktree tests to reflect new return data
- **PR** #30483: (*borgstrom*) Pyobjects recursive import support (for 2015.8)
- **PR** #30491: (*jacksontj*) Add multi-IP support to network state
- **PR** #30496: (*anlutro*) Fix KeyError when adding ignored pillars
- **PR** #30359: (*kingsquirrel152*) Removes suspected copy/paste error for zmq_filtering functionailty
- **PR** #30448: (*cournape*) Fix osx scripts location

- **PR** #30457: (*rallytime*) Remove fsutils references from modules list
- **PR** #30453: (*rallytime*) Make sure private AND public IPs are listed for Linode driver
- **PR** #30458: (*rallytime*) Back-port #30062 to 2015.8
- **PR** #30468: (*timcharper*) make note of s3 role assumption in upcoming changelog
- **PR** #30470: (*whiteinge*) Add example of the match_dict format to accept_dict wheel function
- **PR** #30450: (*gtmanfred*) fix extension loading in novaclient
- **PR** #30212: (*abednarik*) Fix incorrect file permissions in file.line
- **PR** #29947: (*jfindlay*) fileclient: decode file list from master
- **PR** #30363: (*terminalmage*) Use native ``list'' subcommand to list git worktrees
- **PR** #30445: (*jtand*) Boto uses False for is_default instead of None
- **PR** #30406: (*frioux*) Add an example of how to use file.managed/check_cmd
- **PR** #30424: (*isbm*) Check if byte strings are properly encoded in UTF-8
- **PR** #30405: (*jtand*) Updated glusterfs.py for python2.6 compatibility.
- **PR** #30396: (*pass-by-value*) Remove hardcoded val
- **PR** #30391: (*jtand*) Added else statements
- **PR** #30375: (*rallytime*) Wrap formatted log statements with six.u() in cloud/__init__.py
- **PR** #30384: (*isbm*) Bugfix: info_available does not work correctly on SLE 11 series
- **PR** #30376: (*pritambaral*) Fix FLO_DIR path in 2015.8
- **PR** #30389: (*jtand*) Older versions of ipset don't support comments
- **PR** #30373: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #30372: (*jacobhammons*) Updated man pages for 2015.8.4, updated copyright to 2016
- **PR** #30370: (*rallytime*) Remove incomplete function
- **PR** #30366: (*rallytime*) Back-port #28702 to 2015.8
- **PR** #30361: (*cro*) Flip the sense of the test for proxymodule imports, add more fns for esxi proxy
- **PR** #30267: (*isbm*) Fix RPM issues with the date/time and add package attributes filtering
- **PR** #30360: (*jfindlay*) file.remove, file.absent: mention recursive dir removal
- **PR** #30221: (*mbarrien*) No rolcatupdate for user_exist in Postgres>=9.5 #26845
- **PR** #30358: (*terminalmage*) Add libgit2 version to versions-report
- **PR** #30346: (*pass-by-value*) Prevent orphaned volumes
- **PR** #30349: (*rallytime*) Back-port #30347 to 2015.8
- **PR** #30354: (*anlutro*) Make sure all ignore_missing SLSes are caught
- **PR** #30356: (*nmadhok*) Adding code author
- **PR** #30340: (*jtand*) Updated seed_test.py for changes made to seed module
- **PR** #30339: (*jfindlay*) Backport #26511
- **PR** #30343: (*rallytime*) Fix 2015.8 from incomplete back-port
- **PR** #30342: (*eliasp*) Correct whitespace placement in error message

- **PR** #30308: (*rallytime*) Back-port #30257 to 2015.8
- **PR** #30187: (*rallytime*) Back-port #27606 to 2015.8
- **PR** #30223: (*serge-p*) adding support for DragonFly BSD
- **PR** #30238: (*rallytime*) Reinit crypto before calling RSA.generate when generating keys.
- **PR** #30246: (*dmacvicar*) Add missing return data to scheduled jobs (#24237)
- **PR** #30292: (*thegoodduke*) ipset: fix test=true & add comment for every entry
- **PR** #30275: (*abednarik*) Add permanent argument in firewalld.
- **PR** #30328: (*cachedout*) Fix file test
- **PR** #30310: (*pass-by-value*) Empty bucket fix
- **PR** #30211: (*techhat*) Execute choot on the correct path
- **PR** #30309: (*rallytime*) Back-port #30304 to 2015.8
- **PR** #30278: (*nmadhok*) If datacenter is specified in the config, then look for managed objects under it
- **PR** #30305: (*jacobhammons*) Changed examples to use the ``example.com'' domain instead of ``mycompan...
- **PR** #30249: (*mpreziuso*) Fixes performance and timeout issues on win_pkg.install
- **PR** #30217: (*pass-by-value*) Make sure cloud actions can be called via salt run
- **PR** #30268: (*terminalmage*) Optimize file_tree ext_pillar and update file.managed to allow for binary contents
- **PR** #30245: (*rallytime*) Boto secgroup/iam_role: Add note stating us-east-1 is default region
- **PR** #30299: (*rallytime*) ESXi Proxy minions states are located at salt.states.esxi, not vsphere.
- **PR** #30202: (*opdude*) Fixed the periodic call to beacons
- **PR** #30303: (*jacobhammons*) Changed notes to indicate that functions are matched using regular ex...
- **PR** #30284: (*terminalmage*) salt.utils.gitfs: Fix Dulwich env detection and submodule handling
- **PR** #30280: (*jfindlay*) add state mocking to release notes
- **PR** #30273: (*rallytime*) Back-port #30121 to 2015.8
- **PR** #30301: (*cachedout*) Accept whatever comes into hightstate mock for state tests
- **PR** #30282: (*cachedout*) Fix file.append logic
- **PR** #30289: (*cro*) Fix problems with targeting proxies by grains
- **PR** #30293: (*cro*) Ensure we don't log stuff we shouldn't
- **PR** #30279: (*cachedout*) Allow modules to be packed into boto utils
- **PR** #30186: (*rallytime*) Update CLI Examples in boto_ec2 module to reflect correct arg/kwarg positioning
- **PR** #30156: (*abednarik*) Add option in file.append to ignore_whitespace.
- **PR** #30189: (*rallytime*) Back-port #30185 to 2015.8
- **PR** #30215: (*jacobhammons*) Assorted doc bug fixes
- **PR** #30206: (*cachedout*) Revert ``Fix incorrect file permissions in file.line''
- **PR** #30190: (*jacobhammons*) Updated doc site banners
- **PR** #30180: (*jfindlay*) modules.x509._dec2hex: add fmt index for 2.6 compat
- **PR** #30179: (*terminalmage*) Backport #26962 to 2015.8 branch

- **PR** #29693: (*abednarik*) Handle missing source file in ssh_auth.
- **PR** #30155: (*rallytime*) Update boto_secgroup and boto_iam_role docs to only use region OR profile
- **PR** #30158: (*rallytime*) Move _option(value) calls to __salt__['config.option'] in boto utils
- **PR** #30160: (*dmurphy18*) Fix parsing disk usage for line with no number and AIX values in Kilos
- **PR** #30162: (*rallytime*) Update list_present and append grains state function docs to be more clear.
- **PR** #30163: (*rallytime*) Add warning about using ``=" in file.line function
- **PR** #30164: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #30168: (*abednarik*) Fix incorrect file permissions in file.line
- **PR** #30154: (*Oro*) Fix file serialize on windows
- **PR** #30144: (*rallytime*) Added generic ESXCLI command ability to ESXi Proxy Minion
- **PR** #30142: (*terminalmage*) Fix dockerng.push, and allow for multiple images
- **PR** #30075: (*joejulian*) Convert glusterfs module to use xml
- **PR** #30129: (*optix2000*) Clean up _uptodate() in git state
- **PR** #30139: (*rallytime*) Back-port #29589 to 2015.8
- **PR** #30124: (*abednarik*) Update regex to detect ip alias in OpenBSD.
- **PR** #30133: (*stanislavb*) Fix typo in gpgkey URL
- **PR** #30126: (*stanislavb*) Log S3 API error message
- **PR** #30128: (*oeuftete*) Log retryable transport errors as warnings
- **PR** #30096: (*cachedout*) Add rm_special to crontab module
- **PR** #30106: (*techhat*) Ensure last dir
- **PR** #30101: (*gtmanfred*) fix bug where nova driver exits with no adminPass
- **PR** #30090: (*techhat*) Add argument to isdir()
- **PR** #30094: (*rallytime*) Fix doc formatting for cloud.create example in module.py state
- **PR** #30095: (*rallytime*) Add the list_nodes_select function to linode driver
- **PR** #30082: (*abednarik*) Fixed saltversioninfo grain return
- **PR** #30084: (*rallytime*) Back-port #29987 to 2015.8
- **PR** #30071: (*rallytime*) Merge branch `2015.5' into `2015.8'
- **PR** #30067: (*ryan-lane*) Pass in kwargs to boto_secgroup.convert_to_group_ids explicitly
- **PR** #30069: (*techhat*) Ensure that pki_dir exists
- **PR** #30064: (*rallytime*) Add Syndic documentation to miscellaneous Salt Cloud config options
- **PR** #30049: (*rallytime*) Add some more unit tests for the vsphere execution module
- **PR** #30060: (*rallytime*) Back-port #27104 to 2015.8
- **PR** #30048: (*jacobhammons*) Remove internal APIs from rest_cherrypy docs.
- **PR** #30043: (*rallytime*) Be explicit about importing from salt.utils.jinja to avoid circular imports
- **PR** #30038: (*rallytime*) Back-port #30017 to 2015.8
- **PR** #30036: (*rallytime*) Back-port #29995 to 2015.8

- **PR** #30035: (*rallytime*) Back-port #29895 to 2015.8
- **PR** #30034: (*rallytime*) Back-port #29893 to 2015.8
- **PR** #30033: (*rallytime*) Back-port #29876 to 2015.8
- **PR** #30029: (*terminalmage*) git.latest: Fix handling of nonexistent branches
- **PR** #30016: (*anlutro*) Properly normalize locales in locale.gen_locale
- **PR** #30015: (*anlutro*) locale module: don't escape the slash in \n
- **PR** #30022: (*gqgunhed*) Two minor typos fixed
- **PR** #30026: (*anlutro*) states.at: fix wrong variable being used
- **PR** #29966: (*multani*) Fix bigip state/module documentation + serializers documentation
- **PR** #29904: (*twangboy*) Improvements to osx packaging scripts
- **PR** #29950: (*multani*) boto_iam: fix deletion of IAM users when using delete_keys=true
- **PR** #29937: (*multani*) Fix states.boto_iam group users
- **PR** #29934: (*multani*) Fix state.boto_iam virtual name
- **PR** #29943: (*cachedout*) Check args correctly in boto_rds
- **PR** #29924: (*gqgunhed*) fixed: uptime now working on non-US Windows
- **PR** #29883: (*serge-p*) fix for nfs mounts in _active_mounts_openbsd()
- **PR** #29894: (*techhat*) Support Saltfile in SPM
- **PR** #29856: (*rallytime*) Added some initial unit tests for the salt.modules.vsphere.py file
- **PR** #29855: (*rallytime*) Back-port #29740 to 2015.8
- **PR** #29890: (*multani*) Various documentation fixes
- **PR** #29850: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #29811: (*anlutro*) influxdb: add retention policy module functions
- **PR** #29814: (*basepi*) [2015.8][Windows] Fix multi-master on windows
- **PR** #29819: (*rallytime*) Add esxi module and state to docs build
- **PR** #29832: (*jleimbach*) Fixed typo in order to use the keyboard module for RHEL without systemd
- **PR** #29803: (*rallytime*) Add vSphere module to doc ref module tree
- **PR** #29767: (*abednarik*) Hosts file update in mod_hostname.
- **PR** #29772: (*terminalmage*) pygit2: skip submodules when traversing tree
- **PR** #29765: (*gtmanfred*) allow nova driver to be boot from volume
- **PR** #29773: (*l2ol33rt*) Append missing wget in debian installation guide
- **PR** #29800: (*rallytime*) Back-port #29769 to 2015.8
- **PR** #29775: (*paulnivin*) Change listen requisite resolution from name to ID declaration
- **PR** #29754: (*rallytime*) Back-port #29719 to 2015.8
- **PR** #29713: (*The-Loeki*) Pillar-based cloud providers still forcing use of deprecated `provider'
- **PR** #29729: (*rallytime*) Further clarifications on ``unless'' and ``onlyif'' requisites.
- **PR** #29737: (*akissa*) fix pillar sqlite3 documentation examples

- **PR** #29743: (*akissa*) fix pillar sqlite not honouring config options
- **PR** #29723: (*rallytime*) Clarify db_user and db_password kwargs for postgres_user.present state function
- **PR** #29722: (*rallytime*) Link ``stateful'' kwargs to definition of what ``stateful'' means for cmd state.
- **PR** #29724: (*rallytime*) Add examples of using multiple matching levels to Pillar docs
- **PR** #29726: (*cachedout*) Disable some boto tests per resolution of moto issue
- **PR** #29708: (*lagesag*) Fix test=True for file.directory with recurse ignore_files/ignore_dirs.
- **PR** #29642: (*cachedout*) Correctly restart daemonized minions on failure
- **PR** #29599: (*cachedout*) Clean up minion shutdown
- **PR** #29675: (*clinta*) allow returning all refs
- **PR** #29683: (*rallytime*) Catch more specific error to pass the error message through elegantly.
- **PR** #29687: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #29681: (*clinta*) fix bare/mirror in git.latest
- **PR** #29644: (*rallytime*) Fixed a couple more ESXi proxy minion bugs
- **PR** #29645: (*rallytime*) Back-port #29558 to 2015.8
- **PR** #29632: (*jfindlay*) reduce severity of tls module __virtual__ logging
- **PR** #29606: (*abednarik*) Fixed duplicate mtu entry in RedHat 7 network configuration.
- **PR** #29613: (*rallytime*) Various ESXi Proxy Minion Bug Fixes
- **PR** #29628: (*DmitryKuzmenko*) Don't create io_loop before fork
- **PR** #29609: (*basepi*) [2015.8][salt-ssh] Add ability to set salt-ssh command umask in roster
- **PR** #29603: (*basepi*) Fix orchestration failure-checking
- **PR** #29597: (*terminalmage*) dockerng: Prevent exception when API response contains empty dictionary
- **PR** #29596: (*rallytime*) Back-port #29587 to 2015.8
- **PR** #29588: (*rallytime*) Added ESXi Proxy Minion Tutorial
- **PR** #29572: (*gtmanfred*) [nova] use old discover_extensions if available
- **PR** #29545: (*terminalmage*) git.latest: init submodules if not yet initialized
- **PR** #29548: (*rallytime*) Back-port #29449 to 2015.8
- **PR** #29547: (*rallytime*) Refactored ESXCLI-based functions to accept a list of esxi_hosts
- **PR** #29563: (*anlutro*) Fix a call to deprecated method in python-influxdb
- **PR** #29565: (*bdrung*) Fix typos and missing release note
- **PR** #29540: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #29499: (*rallytime*) Initial commit of ESXi Proxy Minion
- **PR** #29526: (*jfindlay*) 2015.8.2 notes: add note about not being released
- **PR** #29531: (*jfindlay*) grains.core: handle undefined variable
- **PR** #29538: (*basepi*) [2015.8] [salt-ssh] Remove umask around actual execution for salt-ssh
- **PR** #29505: (*rallytime*) Update boto_rds state docs to include funky yaml syntax for ``tags'' option.
- **PR** #29513: (*bdrung*) Drop obsolete syslog.target from systemd services

- **PR** #29500: (*rallytime*) Back-port #29467 to 2015.8
- **PR** #29463: (*abednarik*) Add **kwargs to debconf.set.
- **PR** #29399: (*jfindlay*) modules.status: add human_readable option to uptime
- **PR** #29433: (*cro*) Files for building .pkg files for MacOS X
- **PR** #29455: (*jfindlay*) modules.nova.__init__: do not return `None`
- **PR** #29454: (*jfindlay*) rh_service module __virtual__ return error messages
- **PR** #29476: (*tbaker57*) Doc fix - route_table_present needs subnet_names (not subnets) as a key
- **PR** #29487: (*rallytime*) Back-port #29450 to 2015.8
- **PR** #29441: (*rallytime*) Make sure docs line up with blade_idrac function specs
- **PR** #29440: (*rallytime*) Back-port #28925 to 2015.8
- **PR** #29435: (*galet*) Grains return wrong OS version and other OS related values for Oracle Linux
- **PR** #29430: (*rall0r*) Fix host.present state limitation
- **PR** #29417: (*jacobhammons*) Repo install updates
- **PR** #29402: (*techhat*) Add rate limiting to linode
- **PR** #29400: (*twangboy*) Fix #19332
- **PR** #29398: (*cachedout*) Lint 29288
- **PR** #29331: (*DmitryKuzmenko*) Bugfix - #29116 raet dns error
- **PR** #29390: (*jacobhammons*) updated version numbers in documentation
- **PR** #29381: (*nmadhok*) No need to deepcopy since six.iterkeys() creates a copy
- **PR** #29349: (*cro*) Fix mis-setting chassis names
- **PR** #29334: (*rallytime*) Back-port #29237 to 2015.8
- **PR** #29300: (*ticosax*) [dockerng] Add support for volume management in dockerng
- **PR** #29218: (*clan*) check service enable state in test mode
- **PR** #29315: (*jfindlay*) dev tutorial doc: fix markup errors
- **PR** #29317: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #29240: (*clan*) handle acl_type `[[d]efault:][user|group|mask|other]`
- **PR** #29305: (*lorengordon*) Add `file' as a source_hash proto
- **PR** #29272: (*jfindlay*) win_status module: handle 12 hour time in uptime
- **PR** #29289: (*terminalmage*) file.managed: Allow local file sources to use source_hash
- **PR** #29264: (*anlutro*) Prevent ssh_auth.absent from running when test=True
- **PR** #29277: (*terminalmage*) Update git_pillar runner to support new git ext_pillar config schema
- **PR** #29283: (*cachedout*) Single-quotes and use format
- **PR** #29139: (*thomaso-mirodin*) [salt-ssh] Add a range roster and range targeting options for the flat roster
- **PR** #29282: (*cachedout*) dev docs: add development tutorial
- **PR** #28994: (*timcharper*) add support to s3 for aws role assumption
- **PR** #29278: (*techhat*) Add verify_log to SPM

- **PR** #29067: (*jacksontj*) Fix infinite recursion in state compiler for prereq of SLSs
- **PR** #29207: (*jfindlay*) do not shadow ret function argument
- **PR** #29215: (*rallytime*) Back-port #29192 to 2015.8
- **PR** #29217: (*clan*) show duration only if state_output_profile is False
- **PR** #29221: (*ticosax*) [dokcerng] Docu network mode
- **PR** #29269: (*jfindlay*) win_status module: fix function names in docs
- **PR** #29213: (*rallytime*) Move _wait_for_task func from vmware cloud to vmware utils
- **PR** #29271: (*techhat*) Pass full path for digest (SPM)
- **PR** #29244: (*isbm*) List products consistently across all SLES systems
- **PR** #29255: (*garethgreenaway*) fixes to consul module
- **PR** #29208: (*whytewolf*) Glance more profile errors
- **PR** #29200: (*jfindlay*) mount state: unmount by device is optional
- **PR** #29205: (*trevor-h*) Fixes #29187 - using winrm on EC2
- **PR** #29170: (*cachedout*) Migrate pydsl tests to integration test suite
- **PR** #29198: (*jfindlay*) rh_ip module: only set the mtu once
- **PR** #29135: (*jfindlay*) ssh_known_hosts.present state: catch not found exc
- **PR** #29196: (*s0undt3ch*) We need novaclient imported to compare versions
- **PR** #29059: (*terminalmage*) Work around upstream pygit2 bug
- **PR** #29112: (*eliasp*) Prevent backtrace (KeyError) in *ssh_known_hosts.present* state
- **PR** #29178: (*whytewolf*) Profile not being passed to keystone.endpoint_get in _auth. so if a p…

20.2.32 Salt 2015.8.7 Release Notes

Note: Salt 2015.8.4, 2015.8.5, and 2015.8.7 were all released within a short period due to regressions found soon after the releases of 2015.8.4 and 2015.8.5. These release notes contain all of the changes since 2015.8.3 to make it easier to see everything that has changed recently.

Changes for v2015.8.4..v2015.8.7

For `pkg.installed` states, on Linux distributions which use yum/dnf, packages which have a non-zero epoch in the version number now require this epoch to be included when specifying an exact version for a package. For example:

```
vim-enhanced:
  pkg.installed:
    - version: 2:7.4.160-1.el7
```

The `pkg.latest_version` and `pkg.list_repo_pkgs` functions can be used to get the correct version string to use, as they will now contain the epoch when it is non-zero.

Statistics:

- Total Merges: **2**
- Total Issue references: **0**
- Total PR references: **3**

Changes:

- **PR** #31111: (*jtand*) Fixes failing npm test on arch. @ *2016-02-10T21:51:47Z*
  - 8d84c63 Merge pull request #31111 from jtand/8_4_npm_fix
  - b0a48e5 Fixes failing npm test on arch.
  - 733c6ab Some 3rd-party modules (e.g. gnupg) define custom log levels that emit at INFO level and above. This patch sets the color data lookups to default to TextFormat(`reset') rather than producing a stack trace every time a log message is generated from an affected module.
  - 3f71fd0 Revert #30217
    - **PR** #30217: (*pass-by-value*) Make sure cloud actions can be called via salt run
- **PR** #31092: (*terminalmage*) Apply PR #31031 to 2015.8.4.follow_up @ *2016-02-10T20:54:37Z*
  - 5a6a93e Merge pull request #31092 from terminalmage/issue31014-2015.8.4.follow_up * 2767a4e Don't handle epoch specially for dnf
    - e5dfcc0 More efficient way to add the epoch before version number
    - ed74627 include possible epoch in version for rpm
  - 6c6b66a Comment multiprocessing line in minion config
  - 1f7dfef Set multiprocessing to true in config.py
  - 433c645 Fix remove placeholder files
  - 7103756 Remove placeholder files
  - 20b381f Set overwrite to off
  - ca50f56 Fix boto_secgroup
  - fd571d2 Fix boto test failures
  - cfb6588 Fix regression when contents_pillar/contents_grains is a list.
  - 881d866 utils.aws: use time lib to conver to epoch seconds
  - 3141292 The call to cp.get_url needs the saltenv, if you're using environments other than base, it will fail.
  - a869401 Fix regression in git_pillar when multiple remotes are configured
  - 2243f25 Properly set the default value for pillar_merge_lists
  - c7472ff Lint
  - d868711 Fix failing boto_vpc module unit tests
  - ed09516 Fix failing state module tests
  - fd0e940 Pylint fix
  - bc780a7 Don't use pack=pack. Just pass in pack=__salt__ always.

- 1ae022d Pass in `pack' variable to utils.boto.assign_funcs function from ALL boto modules.
- 1efaff1 Remove bad symlinks in osx pkg dirs
- c7db435 Fix regression in scanning for state with `name' param

---

Security Fix

CVE-2016-1866: Improper handling of clear messages on the minion, which could result in executing commands not sent by the master.

This issue affects only the 2015.8.x releases of Salt. In order for an attacker to use this attack vector, they would have to execute a successful attack on an existing TCP connection between minion and master on the pub port. It does not allow an external attacker to obtain the shared secret or decrypt any encrypted traffic between minion and master. Thank you to Sebastian Krahmer <krahmer@suse.com> for bringing this issue to our attention.

We recommend everyone upgrade to 2015.8.4 as soon as possible.

Core Changes

- **PR** #28994: *timcharper* Salt S3 module has learned how to assume IAM roles
- Added option `mock=True` for *`state.sls`* and *`state.highstate`*. This allows the salt state compiler to process sls data in a state run without actually calling the state functions, thus providing feedback on the validity of the arguments used for the functions beyond the preprocessing validation provided by `state.show_sls` (issue 30118 and issue 30189).

```
salt '*' state.sls core,edit.vim mock=True
salt '*' state.highstate mock=True
salt '*' state.apply edit.vim mock=True
```

Changes for v2015.8.3..v2015.8.4

Extended changelog courtesy of Todd Stansell (https://github.com/tjstansell/salt-changelogs):

Generated at: 2016-01-25T17:48:35Z

Total Merges: **320**

Changes:

- **PR** #30613: (*basepi*) Fix minion/syndic clearfuncs
- **PR** #30609: (*seanjnkns*) Fix documentation for pillar_merge_lists which default is False, not ...
- **PR** #30584: (*julianbrost*) file.line state: add missing colon in docstring
- **PR** #30589: (*terminalmage*) Merge 2015.5 into 2015.8
- **PR** #30599: (*multani*) Documentation formatting fixes
- **PR** #30554: (*rallytime*) Make the salt-cloud actions output more verbose and helpful
- **PR** #30549: (*techhat*) Salt Virt cleanup
- **PR** #30553: (*techhat*) AWS: Support 17-character IDs
- **PR** #30532: (*whiteinge*) Add execution module for working in sls files

- **PR** #30529: (*terminalmage*) Merge 2015.5 into 2015.8
- **PR** #30526: (*twangboy*) Added FlushKey to make sure it's changes are saved to disk
- **PR** #30521: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #30485: (*jtand*) Updated pip_state to work with pip 8.0 on 2015.8
- **PR** #30494: (*isbm*) Zypper: info_installed — `errors' flag change to type `boolean'
- **PR** #30506: (*jacksontj*) Properly remove newlines after reading the file
- **PR** #30508: (*rallytime*) Fix Linode driver cloning functionality
- **PR** #30522: (*terminalmage*) Update git.list_worktree tests to reflect new return data
- **PR** #30483: (*borgstrom*) Pyobjects recursive import support (for 2015.8)
- **PR** #30491: (*jacksontj*) Add multi-IP support to network state
- **PR** #30496: (*anlutro*) Fix KeyError when adding ignored pillars
- **PR** #30359: (*kingsquirrel152*) Removes suspected copy/paste error for zmq_filtering functionailty
- **PR** #30448: (*cournape*) Fix osx scripts location
- **PR** #30457: (*rallytime*) Remove fsutils references from modules list
- **PR** #30453: (*rallytime*) Make sure private AND public IPs are listed for Linode driver
- **PR** #30458: (*rallytime*) Back-port #30062 to 2015.8
- **PR** #30468: (*timcharper*) make note of s3 role assumption in upcoming changelog
- **PR** #30470: (*whiteinge*) Add example of the match_dict format to accept_dict wheel function
- **PR** #30450: (*gtmanfred*) fix extension loading in novaclient
- **PR** #30212: (*abednarik*) Fix incorrect file permissions in file.line
- **PR** #29947: (*jfindlay*) fileclient: decode file list from master
- **PR** #30363: (*terminalmage*) Use native ``list'' subcommand to list git worktrees
- **PR** #30445: (*jtand*) Boto uses False for is_default instead of None
- **PR** #30406: (*frioux*) Add an example of how to use file.managed/check_cmd
- **PR** #30424: (*isbm*) Check if byte strings are properly encoded in UTF-8
- **PR** #30405: (*jtand*) Updated glusterfs.py for python2.6 compatibility.
- **PR** #30396: (*pass-by-value*) Remove hardcoded val
- **PR** #30391: (*jtand*) Added else statements
- **PR** #30375: (*rallytime*) Wrap formatted log statements with six.u() in cloud/__init__.py
- **PR** #30384: (*isbm*) Bugfix: info_available does not work correctly on SLE 11 series
- **PR** #30376: (*pritambaral*) Fix FLO_DIR path in 2015.8
- **PR** #30389: (*jtand*) Older versions of ipset don't support comments
- **PR** #30373: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #30372: (*jacobhammons*) Updated man pages for 2015.8.4, updated copyright to 2016
- **PR** #30370: (*rallytime*) Remove incomplete function
- **PR** #30366: (*rallytime*) Back-port #28702 to 2015.8

- **PR** #30361: (*cro*) Flip the sense of the test for proxymodule imports, add more fns for esxi proxy
- **PR** #30267: (*isbm*) Fix RPM issues with the date/time and add package attributes filtering
- **PR** #30360: (*jfindlay*) file.remove, file.absent: mention recursive dir removal
- **PR** #30221: (*mbarrien*) No rolcatupdate for user_exist in Postgres>=9.5 #26845
- **PR** #30358: (*terminalmage*) Add libgit2 version to versions-report
- **PR** #30346: (*pass-by-value*) Prevent orphaned volumes
- **PR** #30349: (*rallytime*) Back-port #30347 to 2015.8
- **PR** #30354: (*anlutro*) Make sure all ignore_missing SLSes are caught
- **PR** #30356: (*nmadhok*) Adding code author
- **PR** #30340: (*jtand*) Updated seed_test.py for changes made to seed module
- **PR** #30339: (*jfindlay*) Backport #26511
- **PR** #30343: (*rallytime*) Fix 2015.8 from incomplete back-port
- **PR** #30342: (*eliasp*) Correct whitespace placement in error message
- **PR** #30308: (*rallytime*) Back-port #30257 to 2015.8
- **PR** #30187: (*rallytime*) Back-port #27606 to 2015.8
- **PR** #30223: (*serge-p*) adding support for DragonFly BSD
- **PR** #30238: (*rallytime*) Reinit crypto before calling RSA.generate when generating keys.
- **PR** #30246: (*dmacvicar*) Add missing return data to scheduled jobs (#24237)
- **PR** #30292: (*thegoodduke*) ipset: fix test=true & add comment for every entry
- **PR** #30275: (*abednarik*) Add permanent argument in firewalld.
- **PR** #30328: (*cachedout*) Fix file test
- **PR** #30310: (*pass-by-value*) Empty bucket fix
- **PR** #30211: (*techhat*) Execute choot on the correct path
- **PR** #30309: (*rallytime*) Back-port #30304 to 2015.8
- **PR** #30278: (*nmadhok*) If datacenter is specified in the config, then look for managed objects under it
- **PR** #30305: (*jacobhammons*) Changed examples to use the ``example.com'' domain instead of ``mycompan...
- **PR** #30249: (*mpreziuso*) Fixes performance and timeout issues on win_pkg.install
- **PR** #30217: (*pass-by-value*) Make sure cloud actions can be called via salt run
- **PR** #30268: (*terminalmage*) Optimize file_tree ext_pillar and update file.managed to allow for binary contents
- **PR** #30245: (*rallytime*) Boto secgroup/iam_role: Add note stating us-east-1 is default region
- **PR** #30299: (*rallytime*) ESXi Proxy minions states are located at salt.states.esxi, not vsphere.
- **PR** #30202: (*opdude*) Fixed the periodic call to beacons
- **PR** #30303: (*jacobhammons*) Changed notes to indicate that functions are matched using regular ex...
- **PR** #30284: (*terminalmage*) salt.utils.gitfs: Fix Dulwich env detection and submodule handling
- **PR** #30280: (*jfindlay*) add state mocking to release notes
- **PR** #30273: (*rallytime*) Back-port #30121 to 2015.8

- **PR** #30301: (*cachedout*) Accept whatever comes into hightstate mock for state tests
- **PR** #30282: (*cachedout*) Fix file.append logic
- **PR** #30289: (*cro*) Fix problems with targeting proxies by grains
- **PR** #30293: (*cro*) Ensure we don't log stuff we shouldn't
- **PR** #30279: (*cachedout*) Allow modules to be packed into boto utils
- **PR** #30186: (*rallytime*) Update CLI Examples in boto_ec2 module to reflect correct arg/kwarg positioning
- **PR** #30156: (*abednarik*) Add option in file.append to ignore_whitespace.
- **PR** #30189: (*rallytime*) Back-port #30185 to 2015.8
- **PR** #30215: (*jacobhammons*) Assorted doc bug fixes
- **PR** #30206: (*cachedout*) Revert ``Fix incorrect file permissions in file.line''
- **PR** #30190: (*jacobhammons*) Updated doc site banners
- **PR** #30180: (*jfindlay*) modules.x509._dec2hex: add fmt index for 2.6 compat
- **PR** #30179: (*terminalmage*) Backport #26962 to 2015.8 branch
- **PR** #29693: (*abednarik*) Handle missing source file in ssh_auth.
- **PR** #30155: (*rallytime*) Update boto_secgroup and boto_iam_role docs to only use region OR profile
- **PR** #30158: (*rallytime*) Move _option(value) calls to __salt__['config.option'] in boto utils
- **PR** #30160: (*dmurphy18*) Fix parsing disk usage for line with no number and AIX values in Kilos
- **PR** #30162: (*rallytime*) Update list_present and append grains state function docs to be more clear.
- **PR** #30163: (*rallytime*) Add warning about using ``=" in file.line function
- **PR** #30164: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #30168: (*abednarik*) Fix incorrect file permissions in file.line
- **PR** #30154: (*Oro*) Fix file serialize on windows
- **PR** #30144: (*rallytime*) Added generic ESXCLI command ability to ESXi Proxy Minion
- **PR** #30142: (*terminalmage*) Fix dockerng.push, and allow for multiple images
- **PR** #30075: (*joejulian*) Convert glusterfs module to use xml
- **PR** #30129: (*optix2000*) Clean up _uptodate() in git state
- **PR** #30139: (*rallytime*) Back-port #29589 to 2015.8
- **PR** #30124: (*abednarik*) Update regex to detect ip alias in OpenBSD.
- **PR** #30133: (*stanislavb*) Fix typo in gpgkey URL
- **PR** #30126: (*stanislavb*) Log S3 API error message
- **PR** #30128: (*oeuftete*) Log retryable transport errors as warnings
- **PR** #30096: (*cachedout*) Add rm_special to crontab module
- **PR** #30106: (*techhat*) Ensure last dir
- **PR** #30101: (*gtmanfred*) fix bug where nova driver exits with no adminPass
- **PR** #30090: (*techhat*) Add argument to isdir()
- **PR** #30094: (*rallytime*) Fix doc formatting for cloud.create example in module.py state

- **PR** #30095: (*rallytime*) Add the list_nodes_select function to linode driver
- **PR** #30082: (*abednarik*) Fixed saltversioninfo grain return
- **PR** #30084: (*rallytime*) Back-port #29987 to 2015.8
- **PR** #30071: (*rallytime*) Merge branch `2015.5' into `2015.8'
- **PR** #30067: (*ryan-lane*) Pass in kwargs to boto_secgroup.convert_to_group_ids explicitly
- **PR** #30069: (*techhat*) Ensure that pki_dir exists
- **PR** #30064: (*rallytime*) Add Syndic documentation to miscellaneous Salt Cloud config options
- **PR** #30049: (*rallytime*) Add some more unit tests for the vsphere execution module
- **PR** #30060: (*rallytime*) Back-port #27104 to 2015.8
- **PR** #30048: (*jacobhammons*) Remove internal APIs from rest_cherrypy docs.
- **PR** #30043: (*rallytime*) Be explicit about importing from salt.utils.jinja to avoid circular imports
- **PR** #30038: (*rallytime*) Back-port #30017 to 2015.8
- **PR** #30036: (*rallytime*) Back-port #29995 to 2015.8
- **PR** #30035: (*rallytime*) Back-port #29895 to 2015.8
- **PR** #30034: (*rallytime*) Back-port #29893 to 2015.8
- **PR** #30033: (*rallytime*) Back-port #29876 to 2015.8
- **PR** #30029: (*terminalmage*) git.latest: Fix handling of nonexistent branches
- **PR** #30016: (*anlutro*) Properly normalize locales in locale.gen_locale
- **PR** #30015: (*anlutro*) locale module: don't escape the slash in \n
- **PR** #30022: (*gqgunhed*) Two minor typos fixed
- **PR** #30026: (*anlutro*) states.at: fix wrong variable being used
- **PR** #29966: (*multani*) Fix bigip state/module documentation + serializers documentation
- **PR** #29904: (*twangboy*) Improvements to osx packaging scripts
- **PR** #29950: (*multani*) boto_iam: fix deletion of IAM users when using delete_keys=true
- **PR** #29937: (*multani*) Fix states.boto_iam group users
- **PR** #29934: (*multani*) Fix state.boto_iam virtual name
- **PR** #29943: (*cachedout*) Check args correctly in boto_rds
- **PR** #29924: (*gqgunhed*) fixed: uptime now working on non-US Windows
- **PR** #29883: (*serge-p*) fix for nfs mounts in _active_mounts_openbsd()
- **PR** #29894: (*techhat*) Support Saltfile in SPM
- **PR** #29856: (*rallytime*) Added some initial unit tests for the salt.modules.vsphere.py file
- **PR** #29855: (*rallytime*) Back-port #29740 to 2015.8
- **PR** #29890: (*multani*) Various documentation fixes
- **PR** #29850: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #29811: (*anlutro*) influxdb: add retention policy module functions
- **PR** #29814: (*basepi*) [2015.8][Windows] Fix multi-master on windows

- **PR** #29819: (*rallytime*) Add esxi module and state to docs build
- **PR** #29832: (*jleimbach*) Fixed typo in order to use the keyboard module for RHEL without systemd
- **PR** #29803: (*rallytime*) Add vSphere module to doc ref module tree
- **PR** #29767: (*abednarik*) Hosts file update in mod_hostname.
- **PR** #29772: (*terminalmage*) pygit2: skip submodules when traversing tree
- **PR** #29765: (*gtmanfred*) allow nova driver to be boot from volume
- **PR** #29773: (*l2ol33rt*) Append missing wget in debian installation guide
- **PR** #29800: (*rallytime*) Back-port #29769 to 2015.8
- **PR** #29775: (*paulnivin*) Change listen requisite resolution from name to ID declaration
- **PR** #29754: (*rallytime*) Back-port #29719 to 2015.8
- **PR** #29713: (*The-Loeki*) Pillar-based cloud providers still forcing use of deprecated `provider'
- **PR** #29729: (*rallytime*) Further clarifications on ``unless'' and ``onlyif'' requisites.
- **PR** #29737: (*akissa*) fix pillar sqlite3 documentation examples
- **PR** #29743: (*akissa*) fix pillar sqlite not honouring config options
- **PR** #29723: (*rallytime*) Clarify db_user and db_password kwargs for postgres_user.present state function
- **PR** #29722: (*rallytime*) Link ``stateful'' kwargs to definition of what ``stateful'' means for cmd state.
- **PR** #29724: (*rallytime*) Add examples of using multiple matching levels to Pillar docs
- **PR** #29726: (*cachedout*) Disable some boto tests per resolution of moto issue
- **PR** #29708: (*lagesag*) Fix test=True for file.directory with recurse ignore_files/ignore_dirs.
- **PR** #29642: (*cachedout*) Correctly restart daemonized minions on failure
- **PR** #29599: (*cachedout*) Clean up minion shutdown
- **PR** #29675: (*clinta*) allow returning all refs
- **PR** #29683: (*rallytime*) Catch more specific error to pass the error message through elegantly.
- **PR** #29687: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #29681: (*clinta*) fix bare/mirror in git.latest
- **PR** #29644: (*rallytime*) Fixed a couple more ESXi proxy minion bugs
- **PR** #29645: (*rallytime*) Back-port #29558 to 2015.8
- **PR** #29632: (*jfindlay*) reduce severity of tls module __virtual__ logging
- **PR** #29606: (*abednarik*) Fixed duplicate mtu entry in RedHat 7 network configuration.
- **PR** #29613: (*rallytime*) Various ESXi Proxy Minion Bug Fixes
- **PR** #29628: (*DmitryKuzmenko*) Don't create io_loop before fork
- **PR** #29609: (*basepi*) [2015.8][salt-ssh] Add ability to set salt-ssh command umask in roster
- **PR** #29603: (*basepi*) Fix orchestration failure-checking
- **PR** #29597: (*terminalmage*) dockerng: Prevent exception when API response contains empty dictionary
- **PR** #29596: (*rallytime*) Back-port #29587 to 2015.8
- **PR** #29588: (*rallytime*) Added ESXi Proxy Minion Tutorial

- **PR** #29572: (*gtmanfred*) [nova] use old discover_extensions if available
- **PR** #29545: (*terminalmage*) git.latest: init submodules if not yet initialized
- **PR** #29548: (*rallytime*) Back-port #29449 to 2015.8
- **PR** #29547: (*rallytime*) Refactored ESXCLI-based functions to accept a list of esxi_hosts
- **PR** #29563: (*anlutro*) Fix a call to deprecated method in python-influxdb
- **PR** #29565: (*bdrung*) Fix typos and missing release note
- **PR** #29540: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #29499: (*rallytime*) Initial commit of ESXi Proxy Minion
- **PR** #29526: (*jfindlay*) 2015.8.2 notes: add note about not being released
- **PR** #29531: (*jfindlay*) grains.core: handle undefined variable
- **PR** #29538: (*basepi*) [2015.8] [salt-ssh] Remove umask around actual execution for salt-ssh
- **PR** #29505: (*rallytime*) Update boto_rds state docs to include funky yaml syntax for ``tags'' option.
- **PR** #29513: (*bdrung*) Drop obsolete syslog.target from systemd services
- **PR** #29500: (*rallytime*) Back-port #29467 to 2015.8
- **PR** #29463: (*abednarik*) Add **kwargs to debconf.set.
- **PR** #29399: (*jfindlay*) modules.status: add human_readable option to uptime
- **PR** #29433: (*cro*) Files for building .pkg files for MacOS X
- **PR** #29455: (*jfindlay*) modules.nova.__init__: do not return `None`
- **PR** #29454: (*jfindlay*) rh_service module __virtual__ return error messages
- **PR** #29476: (*tbaker57*) Doc fix - route_table_present needs subnet_names (not subnets) as a key
- **PR** #29487: (*rallytime*) Back-port #29450 to 2015.8
- **PR** #29441: (*rallytime*) Make sure docs line up with blade_idrac function specs
- **PR** #29440: (*rallytime*) Back-port #28925 to 2015.8
- **PR** #29435: (*galet*) Grains return wrong OS version and other OS related values for Oracle Linux
- **PR** #29430: (*rall0r*) Fix host.present state limitation
- **PR** #29417: (*jacobhammons*) Repo install updates
- **PR** #29402: (*techhat*) Add rate limiting to linode
- **PR** #29400: (*twangboy*) Fix #19332
- **PR** #29398: (*cachedout*) Lint 29288
- **PR** #29331: (*DmitryKuzmenko*) Bugfix - #29116 raet dns error
- **PR** #29390: (*jacobhammons*) updated version numbers in documentation
- **PR** #29381: (*nmadhok*) No need to deepcopy since six.iterkeys() creates a copy
- **PR** #29349: (*cro*) Fix mis-setting chassis names
- **PR** #29334: (*rallytime*) Back-port #29237 to 2015.8
- **PR** #29300: (*ticosax*) [dockerng] Add support for volume management in dockerng
- **PR** #29218: (*clan*) check service enable state in test mode

- **PR** #29315: (*jfindlay*) dev tutorial doc: fix markup errors
- **PR** #29317: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #29240: (*clan*) handle acl_type `[[d]efault:][user|group|mask|other]`
- **PR** #29305: (*lorengordon*) Add `file' as a source_hash proto
- **PR** #29272: (*jfindlay*) win_status module: handle 12 hour time in uptime
- **PR** #29289: (*terminalmage*) file.managed: Allow local file sources to use source_hash
- **PR** #29264: (*anlutro*) Prevent ssh_auth.absent from running when test=True
- **PR** #29277: (*terminalmage*) Update git_pillar runner to support new git ext_pillar config schema
- **PR** #29283: (*cachedout*) Single-quotes and use format
- **PR** #29139: (*thomaso-mirodin*) [salt-ssh] Add a range roster and range targeting options for the flat roster
- **PR** #29282: (*cachedout*) dev docs: add development tutorial
- **PR** #28994: (*timcharper*) add support to s3 for aws role assumption
- **PR** #29278: (*techhat*) Add verify_log to SPM
- **PR** #29067: (*jacksontj*) Fix infinite recursion in state compiler for prereq of SLSs
- **PR** #29207: (*jfindlay*) do not shadow ret function argument
- **PR** #29215: (*rallytime*) Back-port #29192 to 2015.8
- **PR** #29217: (*clan*) show duration only if state_output_profile is False
- **PR** #29221: (*ticosax*) [dokcerng] Docu network mode
- **PR** #29269: (*jfindlay*) win_status module: fix function names in docs
- **PR** #29213: (*rallytime*) Move _wait_for_task func from vmware cloud to vmware utils
- **PR** #29271: (*techhat*) Pass full path for digest (SPM)
- **PR** #29244: (*isbm*) List products consistently across all SLES systems
- **PR** #29255: (*garethgreenaway*) fixes to consul module
- **PR** #29208: (*whytewolf*) Glance more profile errors
- **PR** #29200: (*jfindlay*) mount state: unmount by device is optional
- **PR** #29205: (*trevor-h*) Fixes #29187 - using winrm on EC2
- **PR** #29170: (*cachedout*) Migrate pydsl tests to integration test suite
- **PR** #29198: (*jfindlay*) rh_ip module: only set the mtu once
- **PR** #29135: (*jfindlay*) ssh_known_hosts.present state: catch not found exc
- **PR** #29196: (*s0undt3ch*) We need novaclient imported to compare versions
- **PR** #29059: (*terminalmage*) Work around upstream pygit2 bug
- **PR** #29112: (*eliasp*) Prevent backtrace (KeyError) in *ssh_known_hosts.present* state
- **PR** #29178: (*whytewolf*) Profile not being passed to keystone.endpoint_get in _auth. so if a p…

20.2.33 Salt 2015.8.8 Release Notes

Important: 2015.8.8.2 was released shortly after 2015.8.8 to fix several known issues. If you installed 2015.8.8 before 03/30/2016, you likely have installed 2015.8.8 and can optionally upgrade (find out which version you have installed using `salt --version`. The latest version is `2015.8.8.2`).

Salt 2015.8.8.2

Salt 2015.8.8.2 includes fixes for the following known issues in 2015.8.8:

- issue 32044: Key master with value [...] has an invalid type of list Error
- issue 32004: Failed to import module win_dacl Error
- issue 32114: Wrong validation type for file_ignore_glob key
- issue 31969: Fix file.managed for windows

Important: issue 32183 prevents Salt Cloud from installing the Salt minion on new systems. To workaround this issue, call `salt-cloud -u` to update the bootstrap script to the latest version.

Salt 2015.8.8

Security Fix

CVE-2016-3176: Insecure configuration of PAM external authentication service

This issue affects all Salt versions prior to 2015.8.8/2015.5.10 when PAM *external authentication* is enabled. This issue involves passing an alternative PAM authentication service with a command that is sent to *LocalClient*, enabling the attacker to bypass the configured authentication service. Thank you to Dylan Frese <dmfrese@gmail.com> for bringing this issue to our attention.

This update defines the PAM eAuth `service` that users authenticate against in the Salt Master configuration.

Read Before Upgrading Debian 7 (Wheezy) from 2015.8.7 to 2015.8.8

Before you upgrade from 2015.8.7 on Debian 7, you must run the following commands to remove previous packages:

```
sudo apt-get remove python-pycrypto
sudo apt-get remove python-apache-libcloud
```

Note that `python-pycrypto` will likely remove `python-apache-libcloud`, so the second command might not be necessary. These have been replaced by `python-crypto` and `python-libcloud` with ~bpo70+1 moniker.

Read Before Upgrading Debian 8 (Jessie) from Salt Versions Earlier than 2015.8.4

Salt `systemd` service files are missing the following statement in these versions:

```
[Service]
KillMode=process
```

This statement must be added to successfully upgrade on these earlier versions of Salt.

Changes for v2015.8.7..v2015.8.8

Extended changelog courtesy of Todd Stansell (https://github.com/tjstansell/salt-changelogs):

Generated at: 2016-03-17T21:03:44Z

Total Merges: **312**

Changes:

- **PR** #31947: (*cro*) Move proxymodule assignment earlier in proxy minion init
- **PR** #31948: (*rallytime*) Revert ``not not'' deletion and add comment as to why that is there
- **PR** #31952: (*rallytime*) Fix lint for 2015.8 branch
- **PR** #31933: (*rallytime*) Fix linking syntax in testing docs
- **PR** #31930: (*cro*) Backport changes from 2016.3
- **PR** #31924: (*jfindlay*) update 2015.8.8 release notes
- **PR** #31922: (*cachedout*) For 2015.8 head
- **PR** #31904: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #31906: (*sbreidba*) Win_dacl module: fix FULLCONTROL / FILE_ALL_ACCESS definition
- **PR** #31745: (*isbm*) Fix the always-false behavior on checking state
- **PR** #31911: (*rallytime*) Merge #31903 with pylint fix
- **PR** #31883: (*paiou*) Fix scaleway cloud provider and manage x86 servers
- **PR** #31903: (*terminalmage*) Use remote_ref instead of local_ref to see if checkout is necessary
- **PR** #31845: (*sakateka*) Now a check_file_meta deletes temporary files when test=True
- **PR** #31901: (*rallytime*) Back-port #31846 to 2015.8
- **PR** #31905: (*terminalmage*) Update versionadded directive
- **PR** #31902: (*rallytime*) Update versionadded tag for new funcs
- **PR** #31888: (*terminalmage*) Fix salt.utils.decorators.Depends
- **PR** #31857: (*sjorge*) gen_password and del_password missing from solaris_shadow
- **PR** #31879: (*cro*) Clarify some comments
- **PR** #31815: (*dr4Ke*) Fix template on contents 2015.8
- **PR** #31818: (*anlutro*) Prevent event logs from writing huge amounts of data
- **PR** #31836: (*terminalmage*) Fix git_pillar race condition
- **PR** #31824: (*rallytime*) Back-port #31819 to 2015.8
- **PR** #31856: (*szeestraten*) Adds missing docs for Virtual Network and Subnet options in salt-cloud Azure cloud profile
- **PR** #31839: (*jfindlay*) add 2015.8.8 release notes

- **PR** #31828: (*gtmanfred*) Remove ability of authenticating user to specify pam service
- **PR** #31787: (*anlutro*) Fix user_create and db_create for new versions of influxdb
- **PR** #31800: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #31797: (*Ch3LL*) Change pkg name to less for suse pkg.info_installed test
- **PR** #31793: (*xopher-mc*) fixing init system detection on sles 11, refs #31617
- **PR** #31786: (*isbm*) Bugfix: zypper doesn't detect base product on SLE11 series
- **PR** #31780: (*gtmanfred*) use already created vsphere connection
- **PR** #31779: (*sbreidba*) win_dacl state & module: return comment field as strings, not lists.
- **PR** #31723: (*sjorge*) file_ignore_regex is a list, not bool
- **PR** #31747: (*techhat*) Use get_local_client with MASTER opts, not MINION
- **PR** #31688: (*whiteinge*) Various SMTP returner fixes
- **PR** #31752: (*rallytime*) Back-port #31686 to 2015.8
- **PR** #31733: (*jacobhammons*) docs to clarify cloud configuration
- **PR** #31775: (*techhat*) Show correct provider/driver name
- **PR** #31754: (*techhat*) Check all providers, not just the current one
- **PR** #31735: (*rallytime*) Add reboot, start, and stop actions to digital ocean driver
- **PR** #31770: (*anlutro*) Fix influxdb user functionality for version 0.9+
- **PR** #31743: (*Talkless*) Fix parentheses mismatch in documentation
- **PR** #31162: (*isbm*) Remove MD5 digest from everywhere and default to SHA256
- **PR** #31670: (*terminalmage*) Write lists of minions targeted by syndic masters to job cache
- **PR** #31711: (*ticosax*) [dockerng] Port and Volume comparison should consider Dockerfile
- **PR** #31719: (*techhat*) Don't worry about KeyErrors if the node is already removed
- **PR** #31713: (*ticosax*) [dockerng] Fix dockerng.network_present when container is given by name
- **PR** #31705: (*peripatetic-sojourner*) Foreman pillar
- **PR** #31702: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #31700: (*s0undt3ch*) It's a function!
- **PR** #31679: (*cro*) Fix bad link to the sample REST endpoint in salt-contrib.
- **PR** #31668: (*rallytime*) Some more testing documentation improvements
- **PR** #31653: (*DmitryKuzmenko*) Don't attempt to verify token if it wasn't sent to master.
- **PR** #31629: (*darix*) Fix services on sles
- **PR** #31641: (*rallytime*) Improve Salt Testing tutorial to be a more comprehensive intro
- **PR** #31651: (*dr4Ke*) test case: test_list_present_nested_already
- **PR** #31643: (*opdude*) Make sure we are really updating the mercurial repository
- **PR** #31598: (*terminalmage*) Remove limitations on validation types for eauth targets
- **PR** #31627: (*jakehilton*) Handling error from using gevent 1.1.
- **PR** #31630: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8

- **PR** #31594: (*rallytime*) Back-port #31589 to 2015.8
- **PR** #31604: (*joejulian*) Workaround for non-xml output from gluster cli when not tty
- **PR** #31583: (*vutny*) Remove trailing white spaces
- **PR** #31592: (*rallytime*) Back-port #31546 to 2015.8
- **PR** #31593: (*rallytime*) Back-port #31570 to 2015.8
- **PR** #31567: (*cachedout*) Restore FIPS compliance when using master_finger
- **PR** #31568: (*twangboy*) Grant permissions using SID instead of name
- **PR** #31561: (*jtand*) Skipped test
- **PR** #31550: (*rallytime*) Correct versionadded tag for win_service.config
- **PR** #31549: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #31544: (*DmitryKuzmenko*) Protect getattr from recursion
- **PR** #31525: (*DmitryKuzmenko*) Issues/30643 merge forward fixes
- **PR** #31536: (*virtualguy*) Remove debian repo from raspbian installation
- **PR** #31528: (*vutny*) Correct Salt Cloud documentation about updating Salt Bootstrap script
- **PR** #31539: (*DmitryKuzmenko*) Added temporary workaround for CentOS 7 os-release id bug.
- **PR** #31508: (*mcalmer*) Zypper correct exit code checking
- **PR** #31510: (*vutny*) Add installation guide for Raspbian (Debian on Raspberry Pi)
- **PR** #31498: (*Ch3LL*) rename methods in pkg states test
- **PR** #31471: (*cachedout*) Correct issue where duplicate items in grains list during state run will result in duplicate grains
- **PR** #31455: (*ticosax*) [dockerng] Disable notset check
- **PR** #31488: (*isbm*) Unit Test for Zypper's ``remove'' and ``purge''
- **PR** #31485: (*jacobhammons*) Fixed transport description in minion / master config
- **PR** #31411: (*jtand*) Added some beacons execution module integration tests
- **PR** #31475: (*jacobhammons*) Assorted doc issues
- **PR** #31477: (*vutny*) Correct installation documentation for Ubuntu
- **PR** #31479: (*isbm*) Zypper unit tests & fixes
- **PR** #31445: (*rallytime*) Only use LONGSIZE in rpm.info if available. Otherwise, use SIZE.
- **PR** #31464: (*Ch3LL*) integartion test: ensure decorator only runs on one method and not class
- **PR** #31458: (*vutny*) Correct installation documentation for Debian
- **PR** #31457: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #31439: (*rallytime*) Fix lowpkg.info function for Ubuntu 12 - make sure we have a pkg name
- **PR** #31456: (*RabidCicada*) Clarified the form of requisite targets/requisite-references
- **PR** #31453: (*DmitryKuzmenko*) Backport cp_geturl fix for large files into 2015.8
- **PR** #31444: (*jacobhammons*) Documentation updates - ddns state, file.line state/exe function, installation dependencies
- **PR** #31341: (*twangboy*) Clarification on Windows Package Manager docs

- **PR** #31380: (*kiorky*) Bring up ext_pillar rendering errors as well
- **PR** #31418: (*terminalmage*) Fix core grains when Debian OS detected as `Debian GNU/Linux'
- **PR** #31429: (*mcalmer*) fix argument handling for pkg.download
- **PR** #31432: (*ticosax*) [dockerng] Hotfix docker 1.10.2
- **PR** #31420: (*twangboy*) Handle Unversioned Packages
- **PR** #31417: (*jacobhammons*) ddns state docs updated with notes regarding the name, zone, and keyfile.
- **PR** #31391: (*redmcg*) Added sanity check: is `pillar' in self.opts
- **PR** #31376: (*cro*) Some distros don't have a /lib/systemd
- **PR** #31352: (*ticosax*) [dockerng] Pull missing images when calling dockerng.running
- **PR** #31378: (*mcalmer*) Zypper refresh handling
- **PR** #31373: (*terminalmage*) Use --set-upstream instead of --track to set upstream on older git
- **PR** #31390: (*abednarik*) Fix Logrotate module.
- **PR** #31354: (*ticosax*) [dockerng] Don't require auth for all registries
- **PR** #31368: (*whiteinge*) Update list of netapi clients for autoclass
- **PR** #31367: (*techhat*) Add docs on how to actually use SDB
- **PR** #31357: (*ticosax*) [dockerng] Support docker inconsistencies
- **PR** #31353: (*ticosax*) [dockerng] Fix when ports are integers
- **PR** #31346: (*ticosax*) Backport #31130 to 2015.8
- **PR** #31332: (*terminalmage*) Clarify documentation for gitfs/hgfs/svnfs mountpoint and root options
- **PR** #31305: (*mcalmer*) call zypper with option --non-interactive everywhere
- **PR** #31337: (*jacobhammons*) Release notes and versioning for 2015.8.7
- **PR** #31326: (*ticosax*) [dockerng] Detect settings removal
- **PR** #31292: (*twangboy*) Fix dunder virtual to check for Remote Administration Tools
- **PR** #31287: (*joejulian*) Rework tests and fix reverse peering with gluster 3.7
- **PR** #31196: (*sakateka*) Here are a few fixes utils.network
- **PR** #31299: (*rallytime*) Allow state-output and state-verbose default settings to be set from CLI
- **PR** #31317: (*terminalmage*) Fix versonadded directive
- **PR** #31301: (*terminalmage*) Corrected fix for #30999
- **PR** #31302: (*terminalmage*) Audit CLI opts used in git states
- **PR** #31312: (*terminalmage*) Merge 2015.5 into 2015.8
- **PR** #31225: (*pprince*) Fix in file_tree pillar (Fixes #31223.)
- **PR** #31233: (*mcalmer*) implement version_cmp for zypper
- **PR** #31273: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #31253: (*gtmanfred*) allow for nova servers to be built with premade volumes
- **PR** #31271: (*rallytime*) Back-port #30689 to 2015.8
- **PR** #31255: (*jacobhammons*) Fixes #30461

- **PR** #31189: (*dmacvicar*) Fix crash with scheduler and runners (#31106)
- **PR** #31201: (*The-Loeki*) Utilize prepared grains var in master-side ipcidr matching
- **PR** #31239: (*terminalmage*) Improve logging when master cannot decode a payload
- **PR** #31190: (*twangboy*) Clear minion cache before caching from master
- **PR** #31226: (*pprince*) Minor docs fix: file_tree pillar (Fixes #31124)
- **PR** #31234: (*mcalmer*) improve doc for list_pkgs
- **PR** #31237: (*mcalmer*) add handling for OEM products
- **PR** #31182: (*rallytime*) Back-port #31172 to 2015.8
- **PR** #31191: (*rallytime*) Make sure doc example matches kwarg
- **PR** #31171: (*Ch3LL*) added logic to check for installed package
- **PR** #31177: (*Ch3LL*) add integration test for issue #30934
- **PR** #31181: (*cachedout*) Lint 2015.8 branch
- **PR** #31169: (*rallytime*) Back-port #29718 to 2015.8
- **PR** #31170: (*rallytime*) Back-port #31157 to 2015.8
- **PR** #31147: (*cro*) Documentation clarifications.
- **PR** #31153: (*edencrane*) Fixed invalid host causing `reference to variable before assignment'
- **PR** #31152: (*garethgreenaway*) fixes to beacon module, state module and friends
- **PR** #31149: (*jfindlay*) add 2015.8.7 release notes
- **PR** #31134: (*isbm*) Fix types in the output data and return just a list of products
- **PR** #31120: (*gtmanfred*) Clean up some bugs in the nova driver
- **PR** #31132: (*rallytime*) Make sure required profile configurations passed in a map file work
- **PR** #31131: (*Ch3LL*) integration test for issue #31014
- **PR** #31133: (*cachedout*) Fixup 31121
- **PR** #31125: (*isbm*) Force-kill websocket's child processes faster than default two minutes.
- **PR** #31119: (*sakateka*) fixes for ipv6-only multi-master faliover
- **PR** #31107: (*techhat*) Don't try to add a non-existent IP address
- **PR** #31108: (*jtand*) Changed npm integration test to install request.
- **PR** #31105: (*cachedout*) Lint 30975
- **PR** #31100: (*jfindlay*) states.x509: docs: peer.sls -> peer.conf
- **PR** #31103: (*twangboy*) Point to reg.delete_key_recursive
- **PR** #31093: (*techhat*) Ensure double directories don't get created
- **PR** #31095: (*jfindlay*) modules.file, states.file: explain symbolic links
- **PR** #31061: (*rallytime*) Revert #30217 - was causing salt-cloud -a breakage
- **PR** #31090: (*rallytime*) Back-port #30542 to 2015.8
- **PR** #31085: (*jacksontj*) Correctly remove path we added after loader is completed
- **PR** #31037: (*vutny*) Update RHEL installation guide to reflect latest repo changes

- **PR** #31050: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #31053: (*cachedout*) Fix boto test failures
- **PR** #31029: (*twangboy*) Windows defaults to multiprocessing true
- **PR** #30998: (*dmacvicar*) add_key/reject_key: do not crash w/Permission denied: `/var/cache/salt/master/.dfn' (#27796)
- **PR** #31049: (*twangboy*) Fix versionadded in win_service.config
- **PR** #30987: (*youngnick*) Changed glusterfs.peer() module so state can handle localhost peering attempts.
- **PR** #31042: (*moltob*) Allow using Windows path in archive.extracted name attribute
- **PR** #31012: (*terminalmage*) Fix gitfs/git_pillar/winrepo provider to allow lowercase values
- **PR** #31024: (*jfindlay*) modules.aptpkg.upgrade: clarify dist-upgrade usage
- **PR** #31028: (*twangboy*) Fix config overwrite by windows installer
- **PR** #31031: (*terminalmage*) More complete fix for #31014
- **PR** #31026: (*terminalmage*) Fix regression when contents_pillar/contents_grains is a list.
- **PR** #30978: (*garethgreenaway*) fixes to state.py in 2015.8
- **PR** #30893: (*bdrung*) Make build reproducible
- **PR** #30945: (*cachedout*) Note that pillar cli args are sent via pub
- **PR** #31002: (*rmtmckenzie*) Fix lxc cloud provided minion reporting present
- **PR** #31007: (*jtand*) Fixed rabbitmq_vhost test failure.
- **PR** #31004: (*rallytime*) Remove overstate docs and a few references.
- **PR** #30965: (*anlutro*) Fix rabbitmq_vhost.present result when test=True
- **PR** #30955: (*Ch3LL*) docs: add clarification when source is not defined
- **PR** #30941: (*rallytime*) Back-port #30879 to 2015.8
- **PR** #30940: (*twangboy*) Fix Build Process for OSX
- **PR** #30944: (*jacobhammons*) 2015.8.5 release notes linking and clean up
- **PR** #30905: (*joejulian*) Add realpath to lvm.pvdisplay and use it in vg_present
- **PR** #30924: (*youngnick*) Fix small bug with starting volumes after creation.
- **PR** #30910: (*cro*) fix iDRAC state
- **PR** #30919: (*garethgreenaway*) Fixes to ssh_auth state module
- **PR** #30920: (*jacobhammons*) Versioned to 2015.8.5, added known issue #30300 to release notes
- **PR** #30894: (*terminalmage*) git module/state: Handle identity files more gracefully
- **PR** #30750: (*jfindlay*) extract whole war version
- **PR** #30884: (*rallytime*) Move checks for private_key file existence and permissions to create function
- **PR** #30888: (*ticosax*) Backport #30797 to 2015.8
- **PR** #30895: (*bdrung*) Fix various typos
- **PR** #30889: (*anlutro*) Make msgpack an optional dependency in salt.utils.cache
- **PR** #30896: (*vutny*) Update nodegroups parameter examples in master config example and docs

- **PR** #30898: (*abednarik*) Fix pkg install with version.
- **PR** #30867: (*rallytime*) Pass in `pack' variable to utils.boto.assign_funcs function from ALL boto modules
- **PR** #30849: (*jfindlay*) utils.aws: use time lib to conver to epoch seconds
- **PR** #30874: (*terminalmage*) Fix regression in git_pillar when multiple remotes are configured
- **PR** #30850: (*jfindlay*) modules.dpkg._get_pkg_info: allow for ubuntu 12.04
- **PR** #30852: (*replicant0wnz*) Added more descriptive error message
- **PR** #30847: (*terminalmage*) Backport #30844 to 2015.8 branch
- **PR** #30860: (*vutny*) Correct installation documentation for RHEL-based distributions
- **PR** #30841: (*jacobhammons*) Release notes for 2015.8.5
- **PR** #30835: (*terminalmage*) Integration test for #30820
- **PR** #30837: (*jacobhammons*) Added known issue #30820 to release notes
- **PR** #30832: (*rallytime*) Add grains modules to salt modindex
- **PR** #30822: (*rallytime*) Make sure setting list_user_permissions to ['`, `', `'] doesn't stacktrace
- **PR** #30833: (*terminalmage*) Fix regression in scanning for state with `name' param
- **PR** #30823: (*yannis666*) Fix for mine to merge configuration on update.
- **PR** #30827: (*jacobhammons*) Version to 2015.8.4, added CVE 2016-1866 to release notes
- **PR** #30813: (*anlutro*) Properly set the default value for pillar_merge_lists
- **PR** #30826: (*cachedout*) Fix 30682
- **PR** #30818: (*rallytime*) Back-port #30790 to 2015.8
- **PR** #30815: (*vutny*) Pick right user argument for updating reactor function's low data
- **PR** #30747: (*jfindlay*) modules.lxc.running_systemd: use *command -v* not *which*
- **PR** #30800: (*twangboy*) Ability to handle special case installations
- **PR** #30794: (*rallytime*) A spelling fix and some spacing fixes for the boto_ec2 module docs
- **PR** #30756: (*basepi*) [2015.8] Fix two error conditions in the highstate outputter
- **PR** #30788: (*rallytime*) Fix incorrect doc example for dellchassis blade_idrac state
- **PR** #30791: (*Ch3LL*) do not shadow ret function argument for salt.function
- **PR** #30726: (*sjmh*) Fix improper use of yield in generator
- **PR** #30752: (*terminalmage*) Backport systemd and yum/dnf optimizations from develop into 2015.8
- **PR** #30759: (*thusoy*) Allow managing empty files
- **PR** #30758: (*thusoy*) Support mounting labelled volumes with multiple drives
- **PR** #30686: (*cachedout*) Master-side pillar caching
- **PR** #30675: (*jfindlay*) handle non-ascii minion IDs
- **PR** #30691: (*rallytime*) Make sure we use the ``instance'' kwarg in cloud.action.
- **PR** #30713: (*rallytime*) Fix-up autodoc proxy modules for consistency
- **PR** #30741: (*jfindlay*) states.locale.__virtual__: return exec mod load err
- **PR** #30751: (*basepi*) [2015.8] Merge forward from 2015.5 to 2015.8

- **PR** #30720: (*clinta*) x509.pem_managed does not return changes dict
- **PR** #30687: (*clarkperkins*) Setting `del_root_vol_on_destroy' changes the root volume type to `standard'
- **PR** #30673: (*terminalmage*) Properly derive the git_pillar cachedir from the id instead of the URL
- **PR** #30666: (*cachedout*) Fix grains cache
- **PR** #30623: (*twangboy*) Added service.config function
- **PR** #30678: (*rallytime*) Back-port #30668 to 2015.8
- **PR** #30677: (*clarkperkins*) Fix EC2 volume creation logic
- **PR** #30680: (*cro*) Merge forward from 2015.5, primarily for #30671
- **PR** #30663: (*isbm*) Zypper: latest version bugfix and epoch support feature
- **PR** #30652: (*mew1033*) Fix sh beacon
- **PR** #30657: (*jfindlay*) [2015.8] Backport #30378 and #29650
- **PR** #30656: (*rallytime*) [2015.8] Merge 2015.5 into 2015.8
- **PR** #30644: (*tbaker57*) Another go at fixing 30573
- **PR** #30611: (*isbm*) Bugfix: Zypper *pkg.latest* crash fix
- **PR** #30631: (*rallytime*) Refactor rabbitmq_cluster states to use test=true functionality correctly
- **PR** #30628: (*rallytime*) Refactor rabbitmq_policy states to use test=true functionality correctly
- **PR** #30624: (*cro*) Remove bad symlinks from osx pkg dir
- **PR** #30622: (*rallytime*) Add glance state to list of state modules
- **PR** #30618: (*rallytime*) Back-port #30591 to 2015.8
- **PR** #30625: (*jfindlay*) doc.topics.eauth: clarify client_acl vs eauth

20.2.34 Salt 2015.8.9 Release Notes

Version 2015.8.9 is a bugfix release for *2015.8.0*.

Mint Linux: Important Post-Upgrade Instructions

As a result of some upstream changes, the `os` grain on Mint Linux is now being detected as `LinuxMint` (issue 33295). Run the following command **after you upgrade to 2015.8.9** to reset the `os` grain to `Mint` and the `os_family` grain to `Debian`:

```
salt -G 'os:LinuxMint' grains.setvals "{'os': 'Mint', 'os_family': 'Debian'}"
```

Changes for v2015.8.8..v2015.8.9

Extended changelog courtesy of Todd Stansell (https://github.com/tjstansell/salt-changelogs):

Generated at: 2016-05-17T17:09:39Z

Total Merges: **145**

Changes:

- **PR** #33293: (*twangboy*) Fix minion start retry on Windows (2015.8)

- 22c4331 linux_acl: Allow `-` as a separation character in ACL permissions. Fixes #31270 (#33172) (#33305)
- 7a181f2 Handle more ipv6 error as an exception #33299 (#33300)
- eb47a15 Ignore retcode when checking service's status (#33294)
- **PR** #33274: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- 4f3596a Add comment for test=true w/o changes ret and add changes dict example (#33254)
- 2a30c48 Update Git Policy docs to match Contribution guide (#33252)
- 056c273 Fix #33238 (#33239)
- 1cd34ab Properly report on invalid gitfs/git_pillar/winrepo repos (#33245)
- **PR** #33253: (*rallytime*) Update the release process docs
- 8c2c5b1 update 2015.8.9 release notes (#33251)
- 8ee8ee3 Handle ipv6 error as an exception (#33246)
- 855bed3 Check rendered YAML for invalid keys (#33213)
- 6fb25a8 Make note of files that begin with `_' in master.d or minion.d dirs (#33224)
- a6dc0d2 Gate jnpr imports in salt.proxy.junos.py (#33150)
- 64a89c4 Add docs for the http state (#33222)
- 0a32163 Don't stacktrace when using --out=highstate at CLI during staterun. (#33215)
- 04d714d propagate opts to salt.util.http call (#33219)
- c8236c0 update 2015.8.9 release notes (#33237)
- **PR** #33217: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- 730bec1 [2015.8] Merge forward from 2015.5 to 2015.8 (#33207)
- 379b151 Add a fetch when compiling git_pillar for masterless minions (#33204)
- b3805d8 cloud.clouds.ec2: cache each named node (#33164)
- 86db5df Properly handle failed git commands when redirect_stderr=True (#33203)
- 8a0950d Don't force use of global ssh_config when git identity file is specified (#33152)
- ce07133 update 2015.8.9 release notes (#33198)
- **PR** #33188: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- e9108e0 add 2015.8.9 release notes (#33161)
- 2d9919e [2015.8] Update to latest bootstrap script v2016.05.10 (#33156)
- 033bef2 Hash fileclients by opts (#33142)
- f520fa3 Back-port #31769 to 2015.8 (#33139)
- **PR** #33144: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #33140: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- ad607ef If cache_jobs: True is set, populate the local job cache when running salt-call (#33100)
- 64689a6 Fix broken parsing of usermgmt.conf on OpenBSD (#33135)
- 06a382e Add a check that the cmdline of the found proc matches (#33129)
- 10018e9 salt.utils.gitfs: fix formatting for warning messages (#33064)

- d45b599 Fix 33058 (#33099)
- **PR** #33106: (*abednarik*) Moved _finger_fail method to parent class.
- 20c7e10 clarify docs that map is designed to be run once. is not stateful (#33102)
- 558561d cloud.query needs to define mapper.opts (#33098)
- **PR** #33096: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- 22a327b salt-cloud: fix ipv6-only virtual machines (#32865)
- e788f7e modules.npm: do not log npm --version at info level (#33084)
- **PR** #33081: (*jfindlay*) ssh docs: install py-2.6 for RHEL 5
- **PR** #33088: (*isbm*) Bugfix: Restore boolean values from the repo configuration
- 2c6326f fix tests for file.blockplace to remove newline (#33082)
- **PR** #32892: (*isbm*) Resolve Zypper locks on asynchronous calls
- 3e0bf23 Add fun_args to scheduled return data (part of #24237) (#33039)
- 264c0d4 Don't append a newline when creating new content with blockreplace (#33049)
- 54b783a Pass all data to batch.run() call when using --failhard (#33048)
- 2dbfa55 Display command output when command fails with batch + failhard options (#33050)
- add9199 Allow security_groups kwarg for boto_elb.present to be string or list (#33053)
- 111701c [2015.8] Merge forward from 2015.5 to 2015.8 (#33054)
- 1066063 File and User test fixes for 2015.8 on Fedora23 (#33056)
- f97b5d5 Back-port #33030 to 2015.8 (#33040)
- e90a501 Update the docs for saltutil.find_job to be more clear/accurate (#33017)
- d3d77ce Add saltenv to the cmd.script state function (#33031)
- 3434f44 Fix syndic regression (#33021)
- 4bb3ca5 Compare uid and gid instead of name and group (#32674)
- 9ca5b02 Allow batch mode to use verbose option, as well as show_jid. (#32996)
- 81c0fa4 Fixed glusterfs.peered output (#32955)
- 8c70d7a Clarify some arg docs (#32994)
- 00fbeab Fix boto_secgroup_test (#32986)
- 3362367 fix user cron on solarish operating systems (#32970)
- 07e38bc salt.log.setup: process user args before format (#32796)
- b2d7c81 doc.ref.states.ordering: clarify requisite change (#32934)
- df41d5d mode should default to `text' (#32928)
- f581a82 Remove FileClient class references from docs - it doesn't exist. (#32925)
- 31b96de Update contents_grains option with relevant docs (#32922)
- **PR** #32926: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- 1cd6a45 specify volume tags in profile configuration (#32908)
- 85ca86d Update docs to warn users that -1 isn't valid for iptables insert state (#32906)

- cb68706 Allow profile options to be specified in provider file when using maps (#32900)
- 1a55fcb Clarify service state opening docs - uses `service' virtualname (#32880)
- **PR** #32884: (*terminalmage*) Fix incorrect deprecation notice
- **PR** #32878: (*jacobhammons*) added note about updating the bootstrap script in salt-cloud using th...
- **PR** #32869: (*rallytime*) Use correct config setting in cloud syndic docs
- **PR** #32844: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- eb8fb6b Back-port #31139 to 2015.8 (#32868)
- 4bb5545 backport PR #32732 for issue #23714 (#32847)
- 5ea003b Add pyvmomi version warning to Getting Started with VMware docs (#32845)
- 44f08d0 Pass None as memory limit. (#32841)
- feebe69 Back-port #32813 to 2015.8 (#32839)
- 3b81031 various improvements on cloud deploy script docs (#32659)
- bf85987 update bootstrap to 2016.04.18 release (#32668)
- 83dee63 Back-port #29322 to 2015.8 (#32785)
- **PR** #32787: (*rallytime*) Back-port #32722 to 2015.8
- **PR** #32786: (*rallytime*) Back-port #32703 to 2015.8
- a6a42740 Merge branch `pr-32775' into 2015.8
- cda00f4 Improve documentation on pygit2 versions (#32779)
- 1d6d234 Properly handle minion failback failure. (#32749)
- 3751a27 Document pillar cache options (#32643)
- 35c8af3 modules.win_dacl: consistent case of dacl constants (#32720)
- 2cd0817 Update external auth documentation to list supported matcher. (#32733)
- bba089d Check dependencies type before appling str operations (#32693)
- 3aa0605 Handle when beacon not configured and we try to enable/disable them (#32692)
- **PR** #32718: (*garethgreenaway*) Fixes to schedule.list in 2015.8
- **PR** #32684: (*captaininspiration*) Fix routes for redhat < 6
- 7cdd512 Handle a couple of arguments better (Azure) (#32683)
- aaa03bc Fix for issue 32523 (#32672)
- 21081b1 Don't access deprecated Exception.message attribute. (#32556)
- 5d1e9a4 Lower log level for pillar cache (#32655)
- **PR** #32588: (*anlutro*) Fix salt-ssh module function call argument type juggling by JSON encoding them
- 5e7edfc yumpkg: Ignore epoch in version comparison for explicit versions without an epoch (#32563)
- fea6056 Fixing critical bug to remove only the specified Host instead of the entire Host cluster (#32640)
- 0477f66 align OS grains from older SLES with current one (#32649)
- 8d46244 Prevent crash if pygit2 package is requesting re-compilation of the eâ¦ (#32652)
- **PR** #32614: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8

- **PR** #32616: (*rallytime*) Back-port #32547 to 2015.8
- 3047471 Fix comments value in salt.states.pkgrepo example (#32604)
- ab9da90 Revert PR #32480 and apply #32314 with fixes / documentation (#32558)
- c84c921 Better log message on minion restart if master couldn't be reached. (#32576)
- 3c81798 Don't return None from eval_master (#32555)
- **PR** #32536: (*rallytime*) Back-port #31898 to 2015.8
- d12a1c2 Fix binary search and replace (#32542)
- **PR** #32539: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #32531: (*ticosax*) [dockerng] Fix support of dockerng.volume_present when no volume is on present.
- 5d73d54 Enhance dockerng.wait() to control success on exit_code and on already stopped containers (#32475)
- 214f01e Bugfix: salt-key crashes if tries to generate keys to the directory w/o write access (#32436)
- 288839f Turn on exc_info when logging failed minion startup (#32515)
- 08a8020 Add ignore_epoch option to pkg.installed/removed/purged states (#32520)
- 492ebfc Isbm zypper list products sles11 crash (#32505)
- ae89882 Clear VCS fsbackend and git_pillar locks on master start (#32480)
- a6482a3 Use win32api to get Total System Memory (#32491)
- **PR** #32487: (*terminalmage*) Add explanation of nonzero epoch requirement to pkg.installed state documentation
- **PR** #32482: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- f5bd6bd Backport 31164 and 31364 (#32474)
- **PR** #32450: (*cachedout*) Pass parser options into batch mode
- b299835 Issue #28706: Fix state user.present behavior. (#32448)
- cef33d5 Argument name in docs should match actual arg name (#32445)
- **PR** #32432: (*ticosax*) [dockerng] Fix Domainname introspection
- **PR** #32427: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #32423: (*jtand*) Update glusterfs_test to be inline with #32312
- **PR** #32425: (*cachedout*) Fix salt-cloud parallel provisioning
- 51fb2ac FreeBSD supports packages in format java/openjdk7 so the prior commit broke that functionality. Check freebsd/pkg #1409 for more info.
- 709410a Improve git_pillar documentation/logging
- c53efc3 Update master config docs
- **PR** #32323: (*mcalmer*) fix sorting by latest version when called with an attribute
- **PR** #32376: (*amontalban*) Fixes saltstack/salt`#28262`_
- 0d9a06b Cleaner deprecation process with decorators
- 6979fda Correcty index glusterfs bricks
- **PR** #32393: (*jfindlay*) modules.win_timezone: don't list all zones in debug log
- **PR** #32372: (*rallytime*) Back-port #32358 to 2015.8

- **PR** #32392: (*multani*) Fix documentation on boto_asg and boto_elb modules and states
- **PR** #32373: (*cachedout*) Resolve memory leak in authentication
- **PR** #32126: (*cro*) Add a couple CLI examples for the highstate outputter.
- **PR** #32353: (*mcalmer*) Prevent metadata download when listing installed products
- **PR** #32321: (*abednarik*) Better message when minion fail to start
- **PR** #32345: (*nmadhok*) [2015.8] Check if profile key exists in `vm_` dict
- **PR** #32343: (*Ferbla*) Fixed win_wua example documentation
- **PR** #32360: (*rallytime*) Make sure hash_type is lowercase in master/minion config files
- **PR** #32361: (*cro*) SDB is no longer experimental
- **PR** #32336: (*rallytime*) Back-port #28639 to 2015.8
- **PR** #32332: (*rallytime*) Don't unsubscribe from open events on the CLI too early on long-running commands
- **PR** #32333: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #32289: (*rallytime*) New salt-cloud instances should not use old hash_type default.
- **PR** #32291: (*twangboy*) Fix bad output for chocolatey.version (fixes #14277)
- **PR** #32295: (*rallytime*) Test the contents of `deploy_scripts_search_path' in salt.config.cloud_config
- **PR** #32315: (*ahus1*) fixing file.managed with requests lib
- **PR** #32316: (*vutny*) Update Salt Bootstrap tutorial
- **PR** #32325: (*bdrung*) Re-add shebang to ssh-id-wrapper shell script
- **PR** #32326: (*bdrung*) Fix typos
- **PR** #32300: (*twangboy*) Add documentation to disable winrepo/winrepo_ng
- **PR** #32288: (*terminalmage*) use dictupdate.merge instead of dict.update to merge CLI pillar overrides
- **PR** #32243: (*isbm*) Ensure latest pkg.info_installed ensure latest
- **PR** #32268: (*ticosax*) [dockerng] Improve detection for older versions of docker-py
- **PR** #32258: (*jacobhammons*) Replaces incorrect reference to *master_alive_check*
- **PR** #32254: (*twangboy*) Fix Display Name with spaces in win_servermanager
- **PR** #32248: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #32230: (*terminalmage*) systemd.py: Support both update-rc.d and chkconfig as managers of sysv services
- **PR** #32249: (*jacobhammons*) Fixes windows download paths to account for patch
- **PR** #32221: (*dmurphy18*) Fix version check, fix extracting Major and Minor versions from __ver...
- **PR** #32227: (*twangboy*) Remove list2cmdline usage from win_service.py
- **PR** #32239: (*anlutro*) Add state file name to warning log line
- **PR** #32215: (*DmitryKuzmenko*) rhel oscodename
- **PR** #32217: (*jacobhammons*) 2015.8.8.2 release notes
- **PR** #32212: (*rallytime*) Back-port #32197 to 2015.8
- **PR** #32211: (*rallytime*) Back-port #32210 to 2015.8
- **PR** #32209: (*rallytime*) Back-port #32208 to 2015.8

- **PR** #32204: (*ticosax*) [dockerng] Consider labels carried by the image when comparing user defined labels.
- **PR** #32186: (*rallytime*) Add some ``best practices'' information to test documentation
- **PR** #32176: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #32163: (*rallytime*) Update nacl.config docs to use key value instead of `None'
- **PR** #32166: (*vutny*) *salt.states.file*: correct examples with multiline YAML string
- **PR** #32168: (*rallytime*) Lint 2015.8
- **PR** #32165: (*terminalmage*) Make __virtual__ for rhservice.py more robust
- **PR** #32160: (*cachedout*) Fix beacon tutorial docs
- **PR** #32145: (*paclat*) fixes 29817
- **PR** #32133: (*basepi*) Pass eauth user/groups through salt-api to destination functions
- **PR** #32127: (*rallytime*) Add runners to __salt__ docs
- **PR** #32143: (*DmitryKuzmenko*) Set auth retry count to 0 if multimaster mode is failover.
- **PR** #32134: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #32091: (*clarkperkins*) Fixed the regression in 410da78
- **PR** #32135: (*rallytime*) [2015.8] Support multiple valid option types when performing type checks
- **PR** #31760: (*sakateka*) SMinion need wait future from eval_master
- **PR** #32106: (*jfindlay*) update suse master service patch
- **PR** #32130: (*jacobhammons*) Added known issues 32004 and 32044 to 2015.8.8 release notes
- **PR** #32105: (*clarkperkins*) Fixed invalid deploy_scripts_search_path
- **PR** #32117: (*tomlaredo*) Fixed validation type for file_ignore_glob
- **PR** #32113: (*sakateka*) Fix log message for AsyncAuth initialization
- **PR** #32116: (*ticosax*) Obtain default value of *memory_swap* from the container.
- **PR** #32098: (*rallytime*) Back-port #32083 to 2015.8
- **PR** #32099: (*jacobhammons*) 2015.8.8 release docs
- **PR** #32088: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR** #32074: (*Xiami2012*) Fix code for proto args in modules.iptables
- **PR** #32053: (*basepi*) [2015.8] Fix rabbitmq_user.present tag handling
- **PR** #32023: (*sbreidba*) Move constant declaration into member variable to avoid issues when m…
- **PR** #32026: (*techhat*) Don't require the decode_out file to already exist
- **PR** #32019: (*rallytime*) Back-port #32012 to 2015.8
- **PR** #32015: (*ticosax*) [dockerng] Fix ports exposition when protocol is passed.
- **PR** #31999: (*jacobhammons*) Fixes a doc build exception caused by missing mocks for modules.win_dacl
- **PR** #31992: (*notpeter*) salt-cloud: add D2 and G2 EC2 instance types
- **PR** #31981: (*lloydoliver*) include rotational disks in grains under linux
- **PR** #31970: (*twangboy*) Add apply_template_on_contents for windows
- **PR** #31960: (*aletourneau*) fixed ec2 get_console_output

- **PR** #31958: (*rallytime*) [2015.8] Merge forward from 2015.5 to 2015.8
- 3934c66 Merge branch `2015.5' into `2015.8'
- **PR** #31935: (*twangboy*) Back port nullsoft build script from 2015.8
- **PR** #31912: (*jfindlay*) log.mixins: remove extermporaneous .record

20.2.35 Salt 2015.5.0 Release Notes - Codename Lithium

The 2015.5.0 feature release of Salt is focused on hardening Salt and mostly on improving existing systems. A few major additions are present, primarily the new Beacon system. Most enhancements have been focused around improving existing features and interfaces.

As usual the release notes are not exhaustive and primarily include the most notable additions and improvements. Hundreds of bugs have been fixed and many modules have been substantially updated and added.

Warning: In order to fix potential shell injection vulnerabilities in salt modules, a change has been made to the various `cmd` module functions. These functions now default to `python_shell=False`, which means that the commands will not be sent to an actual shell.

The largest side effect of this change is that ``shellisms'', such as pipes, will not work by default. The modules shipped with salt have been audited to fix any issues that might have arisen from this change. Additionally, the `cmd` state module has been unaffected, and use of `cmd.run` in jinja is also unaffected. `cmd.run` calls on the CLI will also allow shellisms.

However, custom execution modules which use shellisms in `cmd` calls will break, unless you pass `python_shell=True` to these calls.

As a temporary workaround, you can set `cmd_safe: False` in your minion and master configs. This will revert the default, but is also less secure, as it will allow shell injection vulnerabilities to be written in custom code. We recommend you only set this setting for as long as it takes to resolve these issues in your custom code, then remove the override.

Note: Starting in this version of salt, `pillar_opts` defaults to False instead of True. This means that master opts will not be present in minion pillar, and as a result, `config.get` calls will not include master opts.

We recommend pillar is used for configuration options which need to make it to the minion.

Beacons

The beacon system allows the minion to hook into system processes and continually translate external events into the salt event bus. The primary example of this is the *`inotify`* beacon. This beacon uses inotify to watch configured files or directories on the minion for changes, creation, deletion etc.

This allows for the changes to be sent up to the master where the reactor can respond to changes.

Sudo Minion Settings

It is now possible to run the minion as a non-root user and for the minion to execute commands via sudo. Simply add *sudo_user: root* to the minion config, run the minion as a non-root user and grant that user sudo rights to execute salt-call.

Lazy Loader

The Lazy Loader is a significant overhaul of Salt's module loader system. The Lazy Loader will lazily load modules on access instead of all on start. In addition to a major performance improvement, this ``sandboxes'' modules so a bad/broken import of a single module will only affect jobs that require accessing the broken module. (:issue: *20274*)

Enhanced Active Directory Support

The eauth system for LDAP has been extended to support Microsoft Active Directory out of the box. This includes Active Directory and LDAP group support for eauth.

Salt LXC Enhancements

The LXC systems have been overhauled to be more consistent and to fix many bugs.

This overhaul makes using LXC with Salt much easier and substantially improves the underlying capabilities of Salt's LXC integration.

Salt SSH

- Additional configuration options and command line flags have been added to configure the scan roster on the fly
- Added support for `state.single` in `salt-ssh`
- Added support for `publish.publish`, `publish.full_data`, and `publish.runner` in `salt-ssh`
- Added support for `mine.get` in `salt-ssh`

New Windows Installer

The new Windows installer changes how Salt is installed on Windows. The old installer used bbfreeze to create an isolated python environment to execute in. This made adding modules and python libraries difficult. The new installer sets up a more flexible python environment making it easy to manage the python install and add python modules.

Instead of frozen packages, a full python implementation resides in the bin directory (`C:\salt\bin`). By executing pip or easy_install from within the Scripts directory (`C:\salt\bin\Scripts`) you can install any additional python modules you may need for your custom environment.

The .exe's that once resided at the root of the salt directory (`C:\salt`) have been replaced by .bat files and should function the same way as the .exe's in previous versions.

The new Windows Installer will not replace the minion config file and key if they already exist on the target system. Only the salt program files will be replaced. `C:\salt\conf` and `C:\salt\var` will remain unchanged.

Removed Requests Dependency

The hard dependency on the requests library has been removed. Requests is still required by a number of cloud modules but is no longer required for normal Salt operations.

This removal fixes issues that were introduced with requests and salt-ssh, as well as issues users experienced from the many different packaging methods used by requests package maintainers.

Python 3 Updates

While Salt does not YET run on Python 3 it has been updated to INSTALL on Python 3, taking us one step closer. What remains is getting the test suite to the point where it can run on Python 3 so that we can verify compatibility.

RAET Additions

The RAET support continues to improve. RAET now supports multi-master and many bugs and performance issues have been fixed. RAET is much closer to being a first class citizen.

Modified File Detection

A number of functions have been added to the RPM-based package managers to detect and diff files that are modified from the original package installs. This can be found in the new pkg.modified functions.

Reactor Update

Fix an infinite recursion problem for runner/wheel reactor jobs by passing a ``user'' (Reactor) to all jobs that the reactor starts. The reactor skips all events created by that username -- thereby only reacting to events not caused by itself. Because of this, runner and wheel executions from the runner will have user ``Reactor'' in the job cache.

Misc Fixes/Additions

- SDB driver for etcd. (:issue: *22043*)
- Add `only_upgrade` argument to apt-based `pkg.install` to only install a package version if the package is already installed. (Great for security updates!)
- Joyent now requires a `keyname` to be specified in the provider configuration. This change was necessitated upstream by the 7.0+ API.
- Add `args` argument to `cmd.script_retcode` to match `cmd.script` in the `cmd module`. (:issue: *21122*)
- Fixed bug where TCP keepalive was not being sent on the defined interval on the return port (4506) from minion to master. (:issue: *21465*)
- LocalClient may now optionally raise SaltClientError exceptions. If using this class directly, checking for and handling this exception is recommended. (:issue: *21501*)
- The SAuth object is now a singleton, meaning authentication state is global (per master) on each minion. This reduces sign-ins of minions from 3->1 per startup.
- Nested outputter has been optimized, it is now much faster.
- Extensive fileserver backend updates.

Deprecations

- Removed `parameter` keyword argument from `eselect.exec_action` execution module.
- Removed `runas` parameter from the following `pip` execution module functions: `install`, `uninstall`, `freeze`, `list_`, `list_upgrades`, `upgrade_available`, `upgrade`. Please migrate to `user`.

- Removed `runas` parameter from the following `pip` state module functions: `installed`, `removed`, `uptodate` . Please migrate to `user`.
- Removed `quiet` option from all functions in `cmdmod` execution module. Please use `output_loglevel=quiet` instead.
- Removed `parameter` argument from `eselect.set_` state. Please migrate to `module_parameter` or `action_parameter`.
- The `salt_events` table schema has changed to include an additional field called `master_id` to distinguish between events flowing into a database from multiple masters. If `event_return` is enabled in the master config, the database schema must first be updated to add the `master_id` field. This alteration can be accomplished as follows:

```
ALTER TABLE salt_events ADD master_id VARCHAR(255) NOT NULL;
```

Known Issues

- In multi-master mode, a minion may become temporarily unresponsive if modules or pillars are refreshed at the same time that one or more masters are down. This can be worked around by setting `auth_timeout' and `auth_tries' down to shorter periods.

20.2.36 Salt 2015.5.1 Release Notes

release 2015-05-20

Version 2015.5.1 is a bugfix release for *2015.5.0*.

Changes:

- salt.runners.cloud.action() has changed the *fun* keyword argument to *func*. Please update any calls to this function in the cloud runner.

Extended Changelog Courtesy of Todd Stansell (https://github.com/tjstansell/salt-changelogs):

PR #23989: (*rallytime*) Backport #23980 to 2015.5 *@ 2015-05-20T19:33:41Z*

- 6b2cda2 Fix PEP8 complaint
- 239e50f Fixing KeyError when there are no additional pages

PR #23961: (*rallytime*) Backport #23944 to 2015.5 *@ 2015-05-20T04:35:41Z*

- **PR** #23944: (*ryan-lane*) Add missing loginclass argument to _changes call | refs: #23961
- 4648b46 Merge pull request #23961 from rallytime/bp-23944

- 970d19a Add missing loginclass argument to _changes call

PR #23948: (*jfindlay*) augeas.change state now returns changes as a dict *@ 2015-05-20T04:00:10Z*

- 0cb5cd3 Merge pull request #23948 from jfindlay/augeas_changes
- f09b80a augeas.change state now returns changes as a dict

PR #23957: (*rallytime*) Backport #23951 to 2015.5 *@ 2015-05-20T03:04:24Z*

- **PR** #23951: (*ryan-lane*) Do not check perms in file.copy if preserve | refs: #23957
- 2d185f7 Merge pull request #23957 from rallytime/bp-23951
- 996b431 Update file.py
- 85d461f Do not check perms in file.copy if preserve

- **PR** #23956: (*rallytime*) Backport #23906 to 2015.5 @ *2015-05-20T03:04:14Z*
  - **ISSUE** #23839: (*gladiatr72*) wonky loader syndrome | refs: #23906
  - **ISSUE** #23373: (*tnypex*) reactor/orchestrate race condition on salt['pillar.get'] | refs: #23906
  - **PR** #23906: (*gladiatr72*) Added exception handler to trap the RuntimeError raised when | refs: #23956
  - ebff1ff Merge pull request #23956 from rallytime/bp-23906
  - 9d87fd3 add proper marker for format argument
  - 197688e Added exception handler to trap the RuntimeError raised when Depends.enforce_dependency() class method fires unsuccessfully. There appears to be no synchronization within the Depends decorator class wrt the class global dependency_dict which results in incomplete population of any loader instantiation occurring at the time of one of these exceptions.
- **PR** #23955: (*rallytime*) Backport #19305 to 2015.5 @ *2015-05-20T03:03:55Z*
  - **ISSUE** #19852: (*TaiSHiNet*) DigitalOcean APIv2 can't delete machines when there is only 1 page | refs: #23955
  - **ISSUE** #19304: (*TaiSHiNet*) DigitalOcean API v2 cannot delete VMs on 2nd page | refs: #19305
  - **PR** #19305: (*TaiSHiNet*) Fixes droplet listing past page 1 | refs: #23955
  - da3f919 Merge pull request #23955 from rallytime/bp-19305
  - bbf2429 Fixes droplet listing past page 1
- **PR** #23940: (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5 @ *2015-05-19T22:37:58Z*
  - **ISSUE** #23820: (*UtahDave*) 2014.7.5 schedule error | refs: #23881
  - **ISSUE** #22131: (*quixoten*) ``unexpected keyword argument `merge'" on 2014.7.2 (salt-ssh) | refs: #23887
  - **PR** #23939: (*basepi*) Add extended changelog to 2014.7.6 release notes
  - **PR** #23887: (*basepi*) [2014.7] Bring salt-ssh pillar.get in line with mainline pillar.get
  - **PR** #23881: (*garethgreenaway*) Fixes to schedule module in 2014.7
  - 02a78fc Merge pull request #23940 from basepi/merge-forward-2015.5
  - 36f0065 Merge remote-tracking branch `upstream/2014.7' into merge-forward-2015.5
    - 9133912 Merge pull request #23939 from basepi/v2014.7.6release
      - 32b65dc Add extended changelog to 2014.7.6 release notes
    - 0031ca2 Merge pull request #23881 from garethgreenaway/23820_2014_7_schedule_list_issue

        - b207f2a Missing continue in the list function when deleting unused attributes.
    - 63bd21e Merge pull request #23887 from basepi/salt-ssh.pillar.get.22131
        - bc84502 Bring salt-ssh pillar.get in line with mainline pillar.get

- **PR** #23932: (*rallytime*) Backport #23908 to 2015.5 @ *2015-05-19T21:41:28Z*
  - **PR** #23908: (*nleib*) fix connection function to mongo | refs: #23932
  - ee4c01b Merge pull request #23932 from rallytime/bp-23908
  - 5d520c9 fix connection function to mongo
- **PR** #23931: (*rallytime*) Backport #23880 to 2015.5 @ *2015-05-19T21:41:18Z*
  - **PR** #23880: (*bastiaanb*) if setting client_config_dir to `~', expand path | refs: #23931
  - 70bd407 Merge pull request #23931 from rallytime/bp-23880
  - 8ce59a2 if setting client_config_dir to `~', expand path
- **PR** #23898: (*kiorky*) Lxc profiles | refs: #23897 @ *2015-05-19T21:08:28Z*
  - **ISSUE** #23847: (*kiorky*) lxc: systemd containers cant be seeded | refs: #23806 #23898 #23897 #23808
  - **ISSUE** #23833: (*kiorky*) lxc.set_dns fails intermittently | refs: #23898 #23807 #23897 #23808
  - **ISSUE** #23772: (*cheuschober*) lxc.init fails to bootstrap container | refs: #23806 #23898 #23807 #23897 #23808
  - **ISSUE** #23658: (*arthurlogilab*) [salt-cloud lxc] too verbose, shows host: True multiple times when starting | refs: #23898 #23897
  - **ISSUE** #23657: (*arthurlogilab*) [salt-cloud lxc] NameError: global name `__salt__' is not defined | refs: #23727 #23898 #23897
  - **PR** #23897: (*kiorky*) Lxc seed and prof ports | refs: #23898
  - **PR** #23808: (*kiorky*) Lxc seed and prof ports | refs: #23807 #23897
  - **PR** #23807: (*kiorky*) Lxc profiles | refs: #23898
  - **PR** #23806: (*kiorky*) Lxc seeding | refs: #23807
  - 5bdbf0a Merge pull request #23898 from makinacorpus/lxc_profiles
  - d9051a0 lxc: systemd support
  - e8d674f lxc: chroot fallback toggle
  - e2887a0 lxc: sync func name with develop
  - e96e345 lxc more fixes (lxc.set_dns)
  - fdb6424 lxc: Fix salt config (no more a kwarg)
  - 63e63fa repair salt cloud lxc api on develop
  - 80eabe2 lxc salt cloud doc
  - 73f229d lxc: unificate saltconfig/master/master_port
  - 0bc1f08 lxc: refactor a bit saltcloud/lxc interface
  - 7a80370 lxc: get networkprofile from saltcloud
  - 47acb2e lxc: default net profile has now correct options
  - 7eadf48 lxc: select the appropriate default bridge

- **PR** #23922: (*garethgreenaway*) Fixes to debian_ip.py @ *2015-05-19T18:50:53Z*
  - **ISSUE** #23900: (*hashi825*) salt ubuntu network building issue 2015.5.0 | refs: #23922
  - b818f72 Merge pull request #23922 from garethgreenaway/23900_2015_5_bonding_interface_fixes
  - 0bba536 Fixing issue reported when using bonded interfaces on Ubuntu. Attributes should be bond-, but the code was attempting to split just on `bond_`. Fix accounts for both, but the debian_ip.py module will write out bond attributes with bond-
- **PR** #23925: (*jpic*) Fixed wrong path in LXC cloud documentation @ *2015-05-19T18:23:56Z*
  - **PR** #23924: (*jpic*) Fixed wrong path in LXC cloud documentation | refs: #23925
  - b1c98a3 Merge pull request #23925 from jpic/fix/wrong_lxc_path
  - a4bcd75 Fixed wrong path in LXC cloud documentation
- **PR** #23894: (*whiteinge*) Add __all__ attribute to Mock class for docs @ *2015-05-19T17:17:35Z*
  - 7f6a716 Merge pull request #23894 from whiteinge/doc-mock__all__
  - 6eeca46 Add __all__ attribute to Mock class for docs
- **PR** #23884: (*jfindlay*) Fix locale.set_locale on debian @ *2015-05-19T15:51:22Z*
  - **ISSUE** #23767: (*chrimi*) Salt system.locale fails on non existent default locale | refs: #23884
  - 8108a9b Merge pull request #23884 from jfindlay/fix_locale
  - 91c2d51 use append_if_not_found in locale.set_locale
  - e632603 (re)generate /etc/default/locale
- **PR** #23866: (*jfindlay*) backport #23834, change portage.dep.strip_empty to list comprehension @ *2015-05-19T15:50:43Z*
  - **PR** #23834: (*Arabus*) Avoid deprecation warning from portage.dep.strip_empty() | refs: #23866
  - 6bae12f Merge pull request #23866 from jfindlay/flag_strip
  - aa032cc replace portage.dep.strip_empty() with list comprehension
  - 7576872 Proper replacement for portage.dep.strip_empty() with list comprehension, pep8fix
  - 2851a5c Switch portage.dep.strip_empty(...) to filter(None,...) to avoid deprecation warning and do essentially the same
- **PR** #23917: (*corywright*) Split debian bonding options on dash instead of underscore @ *2015-05-19T15:44:35Z*
  - **ISSUE** #23904: (*mbrgm*) Network config bonding section cannot be parsed when attribute names use dashes | refs: #23917
  - a67a008 Merge pull request #23917 from corywright/issue23904
  - c06f8cf Split debian bonding options on dash instead of underscore
- **PR** #23909: (*jayeshka*) `str' object has no attribute `capitalized' @ *2015-05-19T15:41:53Z*
  - e8fcd09 Merge pull request #23909 from jayeshka/file-exe-module
  - e422d9d `str' object has no attribute `capitalized'
- **PR** #23903: (*garethgreenaway*) Adding docs for missing schedule state module parameters. @ *2015-05-19T06:29:34Z*
  - c73bf38 Merge pull request #23903 from garethgreenaway/missing_docs_schedule_state
  - acd8ab9 Adding docs for missing schedule state module parameters.

- f7eb70c changed previous release to 2014.7.6

  - 65d7752 Adding states/tomcat.py unit tests
- **PR** #23860: (*rahulhan*) Adding states/test.py unit tests @ *2015-05-18T17:01:49Z*
  - dde7207 Merge pull request #23860 from rahulhan/states_test_unit_test
  - 1f4cf86 Adding states/test.py unit tests
- **PR** #23859: (*rahulhan*) Adding states/sysrc.py unit tests @ *2015-05-18T17:01:46Z*
  - 3c9b813 Merge pull request #23859 from rahulhan/states_sysrc_unit_test
  - 6a903b0 Adding states/sysrc.py unit tests
- **PR** #23812: (*rallytime*) Backport #23790 to 2015.5 @ *2015-05-18T15:30:34Z*
  - **PR** #23790: (*aboe76*) updated suse spec file to version 2015.5.0 | refs: #23812
  - 4cf30a7 Merge pull request #23812 from rallytime/bp-23790
  - 3f65631 updated suse spec file to version 2015.5.0
- **PR** #23811: (*rallytime*) Backport #23786 to 2015.5 @ *2015-05-18T15:30:27Z*
  - **PR** #23786: (*kaithar*) Log the error generated that causes returns.mysql.returner to except. | refs: #23811
  - c6f939a Merge pull request #23811 from rallytime/bp-23786
  - 346f30b Log the error generated that causes returns.mysql.returner to except.
- **PR** #23850: (*jayeshka*) adding sysbench unit test case @ *2015-05-18T15:28:04Z*
  - ce60582 Merge pull request #23850 from jayeshka/sysbench-unit-test
  - 280abde adding sysbench unit test case
- **PR** #23843: (*The-Loeki*) Fix erroneous virtual:physical core grain detection @ *2015-05-18T15:24:22Z*
  - 060902f Merge pull request #23843 from The-Loeki/patch-1
  - 9e2cf60 Fix erroneous virtual:physical core grain detection
- **PR** #23816: (*Snergster*) Doc for #23685 Added prereq, caution, and additional mask information @ *2015-05-18T15:18:03Z*
  - **ISSUE** #23815: (*Snergster*) [beacons] inotify errors on subdir creation | refs: #23816
  - 3257a9b Merge pull request #23816 from Snergster/23685-doc-fix
  - 0fca49d Added prereq, caution, and additional mask information
- **PR** #23832: (*ahus1*) make saltify provider use standard boostrap procedure @ *2015-05-18T02:18:29Z*
  - **PR** #23829: (*ahus1*) make saltify provider use standard boostrap procedure | refs: #23832
  - 3df3b85 Merge pull request #23832 from ahus1/ahus1_saltify_bootstrap_2015.5
  - f5b1734 fixing problem in unit test
  - cba47f6 make saltify to use standard boostrap procedure, therefore providing all options like master_sign_pub_file
- **PR** #23791: (*optix2000*) Psutil compat @ *2015-05-16T04:05:54Z*
  - 8ec4fb2 Merge pull request #23791 from optix2000/psutil_compat
  - 5470cf5 Fix pylint errors and sloppy inline comments
  - 64634b6 Update psutil.pid_list to use psutil.pids
  - 5dd6d69 Fix imports that aren't in __all__

  - 8a1da33 Fix test cases by mocking psutil_compat
  - 558798d Fix net_io_counters deprecation issue
  - 8140f92 Override unnecessary pylint errors
  - 7d02ad4 Fix some of the mock names for the new API
  - 9b3023e Fix overloaded getters/setters. Fix line lengths
  - 180eb87 Fix whitespace
  - f8edf72 Use new psutil API in ps module
  - e48982f Fix version checking in psutil_compat
  - 93ee411 Create compatibility psutil. psutil 3.0 drops 1.0 API, but we still support old psutil versions.
- **PR** #23782: (*terminalmage*) Replace ``command -v'' with ``which'' and get rid of spurious log messages @ *2015-05-16T04:03:10Z*
  - 405517b Merge pull request #23782 from terminalmage/issue23772
  - 0f6f239 More ignore_retcode to suppress spurious log msgs
  - b4c48e6 Ignore return code in lxc.attachable
  - 08658c0 Replace ``command -v'' with ``which''
- **PR** #23783: (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5 @ *2015-05-15T21:38:51Z*
  - **ISSUE** #22959: (*highlyunavailable*) Windows Salt hangs if file.directory is trying to write to a drive that doesn't exist
  - **ISSUE** #22332: (*rallytime*) [salt-ssh] Add a check for host in /etc/salt/roster | refs: #23748
  - **ISSUE** #16424: (*stanvit*) salt-run cloud.create fails with saltify
  - **PR** #23748: (*basepi*) [2014.7] Log salt-ssh roster render errors more assertively and verbosely
  - **PR** #23731: (*twangboy*) Fixes #22959: Trying to add a directory to an unmapped drive in windows
  - **PR** #23730: (*rallytime*) Backport #23729 to 2014.7
  - **PR** #23729: (*rallytime*) Partially merge #23437 (grains fix) | refs: #23730
  - **PR** #23688: (*twangboy*) Added inet_pton to utils/validate/net.py for ip.set_static_ip in windows
  - **PR** #23488: (*cellscape*) LXC cloud fixes
  - **PR** #23437: (*cedwards*) Grains item patch | refs: #23729
  - cb2eb40 Merge pull request #23783 from basepi/merge-forward-2015.5
  - 9df51ca __opts__.get
  - 51d23ed Merge remote-tracking branch `upstream/2014.7' into merge-forward-2015.5
    - d9af0c3 Merge pull request #23488 from cellscape/lxc-cloud-fixes
      - 64250a6 Remove profile from opts after creating LXC container
      - c4047d2 Set destroy=True in opts when destroying cloud instance
      - 9e1311a Store instance names in opts when performing cloud action
      - 934bc57 Correctly pass custom env to lxc-attach
      - 7fb85f7 Preserve test=True option in cloud states
      - 9771b5a Fix detection of absent LXC container in cloud state

        - fb24f0c Report failure when failed to create/clone LXC container
        - 2d9aa2b Avoid shadowing variables in lxc module
        - 792e102 Allow overriding profile options in lxc.cloud_init_interface
        - 42bd64b Return changes on successful lxc.create from salt-cloud
        - 4409eab Return correct result when creating cloud LXC container
        - 377015c Issue #16424: List all providers when creating salt-cloud instance without profile
    * 808bbe1 Merge pull request #23748 from basepi/salt-ssh.roster.host.check
        - bc53e04 Log entire exception for render errors in roster
        - 753de6a Log render errors in roster to error level
        - e01a7a9 Always let the real YAML error through
    * 72cf360 Merge pull request #23731 from twangboy/fix_22959
        - 88e5495 Fixes #22959: Trying to add a directory to an unmapped drive in windows
    * 2610195 Merge pull request #23730 from rallytime/bp-23729
        - 1877cae adding support for nested grains to grains.item
    * 3e9df88 Merge pull request #23688 from twangboy/fix_23415
        - 6a91169 Fixed unused-import pylint error
        - 5e25b3f fixed pylint errors
        - 1a96766 Added inet_pton to utils/validate/net.py for ip.set_static_ip in windows
- **PR** #23781: (*jfindlay*) fix unit test mock errors on arch @ *2015-05-15T19:40:07Z*
  - 982f873 Merge pull request #23781 from jfindlay/fix_locale_tests
  - 14c711e fix unit test mock errors on arch
- **PR** #23740: (*jfindlay*) Binary write @ *2015-05-15T18:10:44Z*
  - **ISSUE** #23566: (*rks2286*) Salt-cp corrupting the file after transfer to minion | refs: #23740
  - 916b1c4 Merge pull request #23740 from jfindlay/binary_write
  - 626930a update incorrect comment wording
  - a978f5c always use binary file write mode on windows
- **PR** #23736: (*jfindlay*) always load pip execution module @ *2015-05-15T18:10:16Z*
  - **ISSUE** #23682: (*chrish42*) Pip module requires system pip, even when not used (with env_bin) | refs: #23736
  - 348645e Merge pull request #23736 from jfindlay/fix_pip
  - b8867a8 update pip tests
  - 040bbc4 only check pip version in one place
  - 6c453a5 check for executable status of bin_env
  - 3337257 always load the pip module as pip could be anywhere
- **PR** #23770: (*cellscape*) Fix cloud LXC container destruction @ *2015-05-15T17:38:59Z*
  - 10cedfb Merge pull request #23770 from cellscape/fix-cloud-lxc-destruction

  - 4f6021c Fix cloud LXC container destruction
- **PR** #23759: (*lisa2lisa*) fixed the problem for not beable to revoke ., for more detail https... @ *2015-05-15T17:38:38Z*
  - ddea822 Merge pull request #23759 from lisa2lisa/iss23664
  - a29f161 fixed the problem for not beable to revoke ., for more detail https://github.com/saltstack/salt/issues/23201, fixed mysql cannot create user with pure digit password, for more info https://github.com/saltstack/salt/issues/23664
- **PR** #23769: (*cellscape*) Fix file_roots CA lookup in salt.utils.http.get_ca_bundle @ *2015-05-15T16:21:49Z*

  - 0936e1d made changes to test_interfaces function.
- **PR** #23619: (*jfindlay*) fix kmod.present processing of module loading @ *2015-05-13T01:16:56Z*
  - 7df3579 Merge pull request #23619 from jfindlay/fix_kmod_state
  - 73facbf fix kmod.present processing of module loading
- **PR** #23598: (*rahulhan*) Adding states/win_dns_client.py unit tests @ *2015-05-12T21:47:36Z*
  - d4f3095 Merge pull request #23598 from rahulhan/states_win_dns_client_unit_test
  - d08d885 Adding states/win_dns_client.py unit tests
- **PR** #23597: (*rahulhan*) Adding states/vbox_guest.py unit tests @ *2015-05-12T21:46:30Z*
  - 811c6a1 Merge pull request #23597 from rahulhan/states_vbox_guest_unit_test
  - 6a2909e Removed errors
  - 4cde78a Adding states/vbox_guest.py unit tests
- **PR** #23615: (*rallytime*) Backport #23577 to 2015.5 @ *2015-05-12T21:19:11Z*
  - **PR** #23577: (*msciciel*) Fix find and remove functions to pass database param | refs: #23615
  - 029ff11 Merge pull request #23615 from rallytime/bp-23577
  - 6f74477 Fix find and remove functions to pass database param
- **PR** #23603: (*rahulhan*) Adding states/winrepo.py unit tests @ *2015-05-12T18:40:12Z*
  - b858953 Merge pull request #23603 from rahulhan/states_winrepo_unit_test
  - a66e7e7 Adding states/winrepo.py unit tests
- **PR** #23602: (*rahulhan*) Adding states/win_path.py unit tests @ *2015-05-12T18:39:37Z*
  - 3cbbd6d Merge pull request #23602 from rahulhan/states_win_path_unit_test
  - 122c29f Adding states/win_path.py unit tests
- **PR** #23600: (*rahulhan*) Adding states/win_network.py unit tests @ *2015-05-12T18:39:01Z*
  - 3c904e8 Merge pull request #23600 from rahulhan/states_win_network_unit_test
  - b418404 removed lint error
  - 1be8023 Adding states/win_network.py unit tests
- **PR** #23599: (*rahulhan*) Adding win_firewall.py unit tests @ *2015-05-12T18:37:49Z*
  - 10243a7 Merge pull request #23599 from rahulhan/states_win_firewall_unit_test
  - 6cda890 Adding win_firewall.py unit tests
- **PR** #23601: (*basepi*) Add versionadded for jboss module/state @ *2015-05-12T17:22:59Z*
  - e73071d Merge pull request #23601 from basepi/jboss.version.added

  - 0174c8f Add versionadded for jboss module/state
- **PR** #23469: (*s0undt3ch*) Call the windows specific function not the general one @ *2015-05-12T16:47:22Z*
  - 9beb7bc Merge pull request #23469 from s0undt3ch/hotfix/call-the-win-func
  - 83e88a3 Call the windows specific function not the general one
- **PR** #23583: (*jayeshka*) adding states/ipset unit test case @ *2015-05-12T16:31:55Z*
  - d2f0975 Merge pull request #23583 from jayeshka/ipset_states-unit-test
  - 4330cf4 adding states/ipset unit test case
- **PR** #23582: (*jayeshka*) adding states/keyboard unit test case @ *2015-05-12T16:31:17Z*
  - 82a47e8 Merge pull request #23582 from jayeshka/keyboard_states-unit-test
  - fa94d7a adding states/keyboard unit test case
- **PR** #23581: (*jayeshka*) adding states/layman unit test case @ *2015-05-12T16:30:36Z*
  - 77e5b28 Merge pull request #23581 from jayeshka/layman_states-unit-test
  - 297b055 adding states/layman unit test case
- **PR** #23580: (*jayeshka*) adding smf unit test case @ *2015-05-12T16:29:58Z*
  - cbe3282 Merge pull request #23580 from jayeshka/smf-unit-test
  - 4f97191 adding smf unit test case
- **PR** #23572: (*The-Loeki*) Fix regression of #21355 introduced by #21603 @ *2015-05-12T16:28:05Z*
  - **ISSUE** #21603: (*ipmb*) ssh_auth.present fails on key without comment | refs: #23572 #23572
  - **PR** #21355: (*The-Loeki*) Fix for comments containing whitespaces
  - 16a3338 Merge pull request #23572 from The-Loeki/ssh_auth_fix
  - d8248dd Fix regression of #21355 introduced by #21603
- **PR** #23565: (*garethgreenaway*) fix to aptpkg module @ *2015-05-12T16:25:46Z*
  - **ISSUE** #23490: (*lichtamberg*) salt.modules.aptpkg.upgrade should have default ``dist_upgrade=False'' | refs: #23565
  - f843f89 Merge pull request #23565 from garethgreenaway/2015_2_aptpkg_upgrade_default_to_upgrade
  - 97ae514 aptpkg.upgrade should default to upgrade instead of dist_upgrade.
- **PR** #23550: (*jfindlay*) additional mock for rh_ip_test test_build_bond @ *2015-05-12T15:17:16Z*
  - **ISSUE** #23473: (*terminalmage*) unit.modules.rh_ip_test.RhipTestCase.test_build_bond is not properly mocked | refs: #23550
  - c1157cd Merge pull request #23550 from jfindlay/fix_rh_ip_test
  - e9b94d3 additional mock for rh_ip_test test_build_bond
- **PR** #23552: (*garethgreenaway*) Fix for an issue caused by a previous pull request @ *2015-05-11T21:54:59Z*
  - b593328 Merge pull request #23552 from garethgreenaway/2015_5_returner_fix_broken_previous_pr
  - 7d70e2b Passed argumentes in the call _fetch_profile_opts to were in the wrong order
- **PR** #23547: (*slinu3d*) Added AWS v4 signature support for 2015.5 @ *2015-05-11T21:52:24Z*
  - d0f9682 Merge pull request #23547 from slinu3d/2015.5
  - f3bfdb5 Fixed urlparse and urlencode calls

  - 802dbdb Added AWS v4 signature support for 2015.5
- **PR** #23544: (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5 @ *2015-05-11T18:02:06Z*
  - **ISSUE** #23159: (*aneeshusa*) Unused validator
  - **ISSUE** #20518: (*ekle*) module s3.get does not support eu-central-1 | refs: #23467
  - **ISSUE** #563: (*chutz*) pidfile support for minion and master daemons | refs: #23460 #23461
  - **PR** #23538: (*cro*) Update date in LICENSE file
  - **PR** #23505: (*aneeshusa*) Remove unused ssh config validator. Fixes #23159.
  - **PR** #23467: (*slinu3d*) Added AWS v4 signature support
  - **PR** #23460: (*s0undt3ch*) [2014.7] Update to latest stable bootstrap script v2015.05.07
  - **PR** #23444: (*techhat*) Add create_attach_volume to nova driver
  - **PR** #23439: (*techhat*) Add wait_for_passwd_maxtries variable
  - 06c6a1f Merge pull request #23544 from basepi/merge-forward-2015.5
  - f8a36bc Merge remote-tracking branch `upstream/2014.7' into merge-forward-2015.5
    * b79fed3 Merge pull request #23538 from cro/licupdate
      · 345efe2 Update date in LICENSE file
    * a123a36 Merge pull request #23505 from aneeshusa/remove-unused-ssh-config-validator
      · 90af167 Remove unused ssh config validator. Fixes #23159.
    * ca2c21a Merge pull request #23467 from slinu3d/2014.7
      · 0b4081d Fixed pylint error at line 363
      · 5be5eb5 Fixed pylink errors
      · e64f374 Fixed lint errors
      · b9d1ac4 Added AWS v4 signature support
    * e6f9eec Merge pull request #23444 from techhat/novacreateattach
      · ebdb7ea Add create_attach_volume to nova driver
    * e331463 Merge pull request #23460 from s0undt3ch/hotfix/bootstrap-script-2014.7
      · edcd0c4 Update to latest stable bootstrap script v2015.05.07
    * 7a8ce1a Merge pull request #23439 from techhat/maxtries
      · 0ad3ff2 Add wait_for_passwd_maxtries variable
- **PR** #23470: (*twangboy*) Fixed service.restart for salt-minion @ *2015-05-11T17:54:47Z*
  - **ISSUE** #23426: (*twangboy*) Can't restart salt-minion on 64 bit windows (2015.5.0) | refs: #23470
  - aa5b896 Merge pull request #23470 from twangboy/fix_svc_restart
  - b3f284c Fixed tests
  - ad44d79 Fixed service.restart for salt-minion
- **PR** #23539: (*rahulhan*) Adding states/virtualenv_mod.py unit tests @ *2015-05-11T17:02:31Z*
  - 67988b2 Merge pull request #23539 from rahulhan/states_virtualenv_mod_unit_test
  - 750bb07 Adding states/virtualenv_mod.py unit tests

- 6f0cf2e Merge remote-tracking branch `upstream/2015.2' into 2015.5
  - **ISSUE** #23244: (*freimer*) Caller not available in reactors | refs: #23245
  - **PR** #23509: (*keesbos*) Catch the unset (empty/None) environment case
  - **PR** #23423: (*cachedout*) Remove jid_event from state.orch
  - **PR** #23245: (*freimer*) Add Caller functionality to reactors.
  - c966196 Merge pull request #23423 from cachedout/remove_jid_event_from_orch
    - f81aab7 Remove jid_event from state.orch
  - 2bb09b7 Merge pull request #23509 from keesbos/Catch_empty_environment
    - 6dedeac Catch the unset (empty/None) environment case
  - 6d42f30 Merge pull request #23245 from freimer/issue_23244
    - 24cf6eb Add Caller functionality to reactors.
- **PR** #23513: (*gladiatr72*) short-circuit auto-failure of iptables.delete state @ *2015-05-11T15:18:33Z*
  - c3f03d8 Merge pull request #23513 from gladiatr72/RFC_stop_iptables.check_from_short-circuiting_position-only_delete_rule
  - c71714c short-circuit auto-failure of iptables.delete state if position argument is set without the other accoutrements that check_rule requires.
- **PR** #23534: (*jayeshka*) adding states/ini_manage unit test case @ *2015-05-11T14:32:06Z*
  - 4e77f6f Merge pull request #23534 from jayeshka/ini_manage_states-unit-test
  - 831223c adding states/ini_manage unit test case
- **PR** #23533: (*jayeshka*) adding states/hipchat unit test case @ *2015-05-11T14:30:22Z*
  - 11ba9ed Merge pull request #23533 from jayeshka/hipchat-states-unit-test
  - 41d14b3 adding states/hipchat unit test case

  - 58ec2a2 Merge pull request #23406 from jayeshka/lxc-states-unit-test
  - 32a0d03 adding states/lxc unit test case
- **PR** #23395: (*basepi*) [2015.2] Add note to 2015.2.0 release notes about master opts in pillar @ *2015-05-05T22:15:20Z*
  - 8837d00 Merge pull request #23395 from basepi/2015.2.0masteropts
  - b261c95 Add note to 2015.2.0 release notes about master opts in pillar
- **PR** #23393: (*basepi*) [2015.2] Add warning about python_shell changes to 2015.2.0 release notes @ *2015-05-05T22:12:46Z*
  - f79aed5 Merge pull request #23393 from basepi/2015.2.0python_shell
  - b2f033f Add CLI note
  - 48e7b3e Add warning about python_shell changes to 2015.2.0 release notes
- **PR** #23380: (*gladiatr72*) Fix for double output with static salt cli/v2015.2 @ *2015-05-05T21:44:28Z*
  - a977776 Merge pull request #23380 from gladiatr72/fix_for_double_output_with_static__salt_CLI/v2015.2
  - c47fdd7 Actually removed the `static` bits from below the else: fold this time.
  - 4ee3679 Fix for incorrect output with salt CLI --static option
- **PR** #23379: (*rahulhan*) Adding states/rabbitmq_cluster.py @ *2015-05-05T21:44:06Z*
  - 5c9543c Merge pull request #23379 from rahulhan/states_rabbitmq_cluster_test

  - 04c22d1 Adding states/rabbitmq_cluster.py
- **PR** #23377: (*rahulhan*) Adding states/xmpp.py unit tests @ *2015-05-05T21:43:35Z*
  - 430f080 Merge pull request #23377 from rahulhan/states_xmpp_test
  - 32923b5 Adding states/xmpp.py unit tests
- **PR** #23335: (*steverweber*) 2015.2: include doc in master config for module_dirs @ *2015-05-05T21:28:58Z*
  - 8c057e6 Merge pull request #23335 from steverweber/2015.2
  - 5e3bae9 help installing python pysphere lib
  - 97513b0 include module_dirs
  - 36b1c87 include module_dirs
- **PR** #23362: (*jayeshka*) adding states/zk_concurrency unit test case @ *2015-05-05T15:50:06Z*
  - 1648253 Merge pull request #23362 from jayeshka/zk_concurrency-states-unit-test
  - f60dda4 adding states/zk_concurrency unit test case
- **PR** #23363: (*jayeshka*) adding riak unit test case @ *2015-05-05T14:23:05Z*
  - 1cdaeed Merge pull request #23363 from jayeshka/riak-unit-test
  - f9da6db adding riak unit test case

20.2.37 Salt 2015.5.10 Release Notes

Security Fix

CVE-2016-3176: Insecure configuration of PAM external authentication service

This issue affects all Salt versions prior to 2015.8.8/2015.5.10 when PAM *external authentication* is enabled. This issue involves passing an alternative PAM authentication service with a command that is sent to *LocalClient*, enabling the attacker to bypass the configured authentication service. Thank you to Dylan Frese <dmfrese@gmail.com> for bringing this issue to our attention.

This update defines the PAM eAuth `service` that users authenticate against in the Salt Master configuration.

(No additional fixes are contained in this release).

Read Before Upgrading Debian 8 (Jessie) from Salt Versions Earlier than 2015.5.9

Salt `systemd` service files are missing the following statement in these versions:

```
[Service]
KillMode=process
```

This statement must be added to successfully upgrade on these earlier versions of Salt.

20.2.38 Salt 2015.5.11 Release Notes

Version 2015.5.11 is a bugfix release for *2015.5.0*.

Changes for v2015.5.10..v2015.5.11

Extended changelog courtesy of Todd Stansell (https://github.com/tjstansell/salt-changelogs):

Generated at: 2016-05-20T21:02:38Z

Total Merges: **101**

Changes:

- dc8ce2d Fix traceback in logging for config validation (#33386) (#33405)
- **PR** #33383: (*thatch45*) maintain the fallabck because I am totally sick of this crap
- 755acfb Improve doc clarity for disable_modules documentation (#33379)
- 2b5ad12 Better YAML syntax error handling (#33375)
- **PR** #33372: (*jacobhammons*) revved 2015.8 branch to .9 in version selector
- 55be0ab Expanded documentation for boto_elb state and module (#33341)
- 9b42a05 Added some more docs for master and minion config settings (#33292)
- 8acee5e Fix iptables --match-set (#23643) (#33301)
- 757ef20 fix ``loose'' typo (#33290)
- b7d98da Add auth_tries config option to minion.rst docs (#33287)
- 061851b Document minion_id_caching config value (#33282)
- 8fa72f6 Clarify file.replace MULTILINE flag interaction with regex anchors (#33137)
- 4b1f460 update 2015.5.11 release notes (#33236)
- **PR** #33211: (*cachedout*) Don't try to kill a parent proc if we can't
- f868329 Resolve issue with pkg module on Mint Linux (#33205)
- a09e1b6 Add pip installed and removed test (#33178)
- 96e3586 update 2015.5.11 release notes (#33197)
- 09b072a Fix file.managed for Windows (#33181)
- 30868ab [2015.5] Update to latest bootstrap script v2016.05.11 (#33185)
- 264ad34 Pip fix (#33180)
- 43288b2 add 2015.5.11 release notes (#33160)
- e0da8fd [2015.5] Update to latest bootstrap script v2016.05.10 (#33155)
- **PR** #33141: (*jtand*) Skipping salt-call --local test
- 878d34a Doc mock decorators (#33132)
- 30edead Lower display of msgpack failure msg to debug (#33078)
- d4928c5 Use saltstack repo in buildpackage.py on CentOS 5 (#33080)
- 61d126c add test for installing package while using salt-call --local (#33025)
- 6d3e4e8 File and User test fixes for 2015.5 on Fedora23 (#33055)
- d48b2b8 test pillar.items output (#33060)
- 398793b Fix minor document error of test.assertion (#33067)
- f875763 Saltfile with pillar tests (#33045)

- 1d78924 Backport #33021 manually to 2015.5 (#33044)
- f00b5f9 Add run_on_start docs to schedule.rst (#32958)
- edce22a backport PR #32732 to 2015.5 fixes #23714 (#32848)
- 9b5c14c *salt-cloud -u* downloads stable version from bootstrap.saltstack.com by default (#32837)
- 9725804 update bootstrap to 2016.04.18 release (#32667)
- **PR** #32776: (*rallytime*) [2015.5] Merge forward from 2014.7 to 2015.5
- 67d0c81 Support remote sources in a source list (#32691)
- **PR** #32686: (*cachedout*) Fix stacktrace in batch with dup minion ids
- 3ec9502 Update ``Low Hanging Fruit'' to ``Help Wanted'' (#32675)
- 77bea56 Additional documentation on calling exec modules from templates (#32657)
- c910b8d Fixing critical bug to remove only the specified Host instead of the entire Host cluster (#32639)
- 4568565 Add _syspaths.py to .gitignore (#32638)
- **PR** #32561: (*gtmanfred*) redact passwords and hashes from user.present updates
- **PR** #32538: (*rallytime*) Back-port #32528 to 2015.5
- 29333e5 Add documentation for some master/minion configs (#32454)
- **PR** #32458: (*terminalmage*) Improve and clarify docs on provider overrides.
- 0809126 Merge #32293 with test fixes (#32418)
- bbd8260 Ignore Raspbian in service.py __virtual__ (#32421)
- 690addf FreeBSD supports packages in format java/openjdk7 so the prior commit broke that functionality. Check `freebsd/pkg#1409` for more info.
- **PR** #32399: (*amontalban*) Backport to fix #28262 for 2015.5 as requested in PR #32376
- **PR** #32374: (*cachedout*) Update proxmox documentation
- **PR** #32339: (*Ch3LL*) remove reference to master_alive_check in 2015.5
- **PR** #32284: (*rallytime*) Audit config.py default types and values
- **PR** #32302: (*terminalmage*) Properly support packages with blank ``Release'' param in pkg.latest_version
- **PR** #32162: (*terminalmage*) Properly handle yum/zypper repositories in pkgrepo.managed
- **PR** #32223: (*twangboy*) Create minion.d directory on install for Windows
- **PR** #32218: (*cachedout*) Only display error when tty is True in salt-ssh
- **PR** #32196: (*jtand*) Fixed pylint error in app_pam_test.py
- **PR** #32154: (*Ch3LL*) Add integration tests for salt-api using pam eauth
- **PR** #32170: (*gtmanfred*) add name for lxc for use with cloud cache
- **PR** #32164: (*terminalmage*) Make __virtual__ for rhservice.py more robust (2015.5 branch)
- **PR** #32141: (*paclat*) fixes 32108
- **PR** #32129: (*terminalmage*) Support multiple valid option types when performing type checks
- **PR** #32056: (*bstevenson*) Fix list absent
- **PR** #32096: (*rallytime*) Back-port #32065 to 2015.5

- **PR** #32104: (*jacobhammons*) One additional known issue for 2015.5.10 release notes
- **PR** #32100: (*jacobhammons*) 2015.5.10 release docs
- **PR** #32038: (*terminalmage*) Improve state module docs, replace references to state.highstate/state.sls with state.apply
- **PR** #32051: (*terminalmage*) Fix outputter for state.apply
- **PR** #32002: (*abednarik*) Added Manajro Linux to virtual.
- **PR** #31957: (*rallytime*) [2015.5] Merge forward from 2014.7 to 2015.5
- **PR** #31972: (*terminalmage*) Make lack of python-ldap module more explicit when LDAP eauth is enabled
- **PR** #31935: (*twangboy*) Back port nullsoft build script from 2015.8
- **PR** #31912: (*jfindlay*) log.mixins: remove extermporaneous .record
- **PR** #31825: (*jtand*) Updated .testing.pylintrc to match newer versions of pylint
- **PR** #31900: (*rallytime*) Add ``python module'' clarification to ps __virtual__ warning.
- **PR** #31878: (*rallytime*) Make sure __virtual__ error message is helpful when psutil is missing
- **PR** #31852: (*rallytime*) [2015.5] Merge forward from 2014.7 to 2015.5
- **PR** #31827: (*gtmanfred*) Remove ability of authenticating user to specify pam service
- **PR** #31810: (*whiteinge*) Fix outdated Jinja `env' variable reference
- **PR** #31744: (*brejoc*) Fix for AttributeError with libcloud <0.15
- **PR** #31740: (*terminalmage*) Assume pillar_opts is False when not specified in masterless mode
- **PR** #31750: (*rallytime*) Back-port #26170 to 2015.5
- **PR** #31689: (*rallytime*) Back-port #29467 to 2015.5
- **PR** #31687: (*cachedout*) Removed useless GPG tests
- **PR** #31660: (*terminalmage*) Remove epoch from version string if present when installing with yum
- **PR** #31683: (*rallytime*) Back-port #31578 to 2015.5
- **PR** #31682: (*cachedout*) Add definition of job cache to glossary
- **PR** #31658: (*rallytime*) Add mentioned of Salt's Coding Style docs to the Contributing docs
- **PR** #31655: (*rallytime*) Make note of pylint dependencies in docs
- **PR** #31440: (*cachedout*) Set correct type for master_tops config value
- **PR** #31622: (*jfindlay*) doc/topics/tutorials/http: update query decoding docs
- **PR** #31558: (*cachedout*) Don't stacktrace if ssh binary is not installed with salt-ssh
- **PR** #31521: (*terminalmage*) salt-ssh: Fix race condition when caching files to build the thin tarball
- **PR** #31497: (*rallytime*) Remove duplicate ``timeout'' definition in Roster docs
- **PR** #31472: (*rallytime*) Update contributing docs
- **PR** #31461: (*DmitryKuzmenko*) Set auth retry count to 0 if multimaster mode is failover.
- **PR** #31442: (*sastorsl*) Add os.path.exists(src) to file.py, def copy
- **PR** #31441: (*cachedout*) Include localhost minions in presence detection for runner
- **PR** #31416: (*carlwgeorge*) selinux module documentation fix

- **PR** #31336: (*terminalmage*) Improve config validation logging
- **PR** #31374: (*sjorge*) fix for #31369
- **PR** #31339: (*jacobhammons*) changed latest release to 2015.8.7
- **PR** #31288: (*notpeter*) Improve salt.states.ssh_known_hosts documentation.
- **PR** #31183: (*heyfife*) Fixed named external_ip reservation/re-use code in gce driver.
- **PR** #31032: (*terminalmage*) (2015.5 branch) yumpkg: ensure that dnf-plugins-core >= 0.1.15 is installed
- **PR** #31264: (*sjorge*) fix if_missing gets appended to dirs list, take III
- **PR** #31110: (*cachedout*) Fixup 30730
- **PR** #30974: (*rallytime*) Back-port #30949 to 2015.5
- **PR** #30942: (*rallytime*) Back-port #30897 to 2015.5
- **PR** #30922: (*jacobhammons*) Rev latest version to 2015.8.5
- **PR** #30865: (*abednarik*) Better boto elb error message.
- **PR** #30831: (*jacobhammons*) Updated readme
- **PR** #30829: (*jacobhammons*) Updated latest version to 2015.8.4
- **PR** #30784: (*rallytime*) Back-port #24952 to 2015.5
- **PR** #30764: (*terminalmage*) Work around yum versionlock's inability to remove holds by package name alone
- **PR** #30760: (*toanju*) Changed output format of arp_ip_target from list to comma delimited…
- **PR** #30757: (*yannis666*) Fix to mine update to merge configuration
- **PR** #30749: (*abednarik*) Fix Netwotk hostname Module in Debian systems.
- **PR** #30699: (*abednarik*) Add Retry to save_load.
- **PR** #30659: (*sjmh*) Fix lsscsi issues for certain platforms
- **PR** #30671: (*techhat*) Add file locking to cloud index
- **PR** #30586: (*abednarik*) Fix comment_line permissions.
- **PR** #30582: (*terminalmage*) yumpkg.check_db: run separate repoquery commands when multiple names passed
- **PR** #30548: (*jacobhammons*) Added placeholder release notes for 2015.5.10
- **PR** #30530: (*terminalmage*) 2015.5 tweaks from #30529
- **PR** #30484: (*terminalmage*) Backport DNF support to 2015.5 branch
- **PR** #30512: (*jfindlay*) disable pkgrepo test for ubuntu 15.10+
- **PR** #30478: (*jtand*) Updated pip_state to work with pip 8.0
- **PR** #30482: (*borgstrom*) Pyobjects recursive import support (for 2015.5)
- **PR** #30459: (*jfindlay*) modules.pkg: disable repo int test for ubuntu 15.10
- **PR** #30443: (*jtand*) Boto uses False for is_default instead of None
- **PR** #30420: (*attiasr*) Backport #26853
- **PR** #30364: (*rallytime*) Add TLS version imports and add linode driver documentation notices
- **PR** #30184: (*rallytime*) Back-port #30166 to 2015.5

- **PR** #30291: (*thegoodduke*) ipset: fix test=true & add comment for every entry

20.2.39 Salt 2015.5.2 Release Notes

release 2015-06-10

Version 2015.5.2 is a bugfix release for *2015.5.0*.

Extended Changelog Courtesy of Todd Stansell (https://github.com/tjstansell/salt-changelogs):

PR #24346: (*rallytime*) Backport #24271 to 2015.5 *@ 2015-06-03T18:44:31Z*

PR #24271: (*randybias*) Fixed the setup instructions

refs: #24346

- 76927c9 Merge pull request #24346 from rallytime/bp-24271
- 04067b6 Fixed the setup instructions

PR #24345: (*rallytime*) Backport #24013 to 2015.5 *@ 2015-06-03T18:39:41Z*

ISSUE #24012: (*jbq*) Enabling a service does not create the appropriate rc.d symlinks on Ubuntu

refs: #24013

PR #24013: (*jbq*) Fix enabling a service on Ubuntu #24012

refs: #24345

- 4afa03d Merge pull request #24345 from rallytime/bp-24013
- 16e0732 Fix enabling a service on Ubuntu #24012

PR #24365: (*jacobhammons*) Fixes for PDF build errors *@ 2015-06-03T17:50:02Z*

- c3392c2 Merge pull request #24365 from jacobhammons/DocFixes
- 0fc1902 Fixes for PDF build errors

PR #24313: (*nicholascapo*) Fix #22991 Correctly set result when test=True *@ 2015-06-03T14:49:18Z*

ISSUE #22991: (*nicholascapo*) npm.installed ignores test=True * ae681a4 Merge pull request #24313 from nicholascapo/fix-22991-npm.installed-test-true * ac9644c Fix #22991 npm.installed correctly set result on test=True

PR #24312: (*nicholascapo*) Fix #18966: file.serialize supports test=True *@ 2015-06-03T14:49:06Z*

ISSUE #18966: (*bechtoldt*) file.serialize ignores test=True * d57a9a2 Merge pull request #24312 from nicholascapo/fix-18966-file.serialize-test-true * e7328e7 Fix #18966 file.serialize correctly set result on test=True

PR #24302: (*jfindlay*) fix pkg hold/unhold integration test *@ 2015-06-03T03:27:43Z*

- 6b694e3 Merge pull request #24302 from jfindlay/pkg_tests
- c2db0b1 fix pkg hold/unhold integration test

PR #24349: (*rallytime*) Remove references to mount_points in ec2 docs *@ 2015-06-03T01:54:09Z*

ISSUE #14021: (*mathrawka*) EC2 doc mentions mount_point, but unable to use properly

refs: #24349

- aca8447 Merge pull request #24349 from rallytime/fix-14021
- a235b11 Remove references to mount_points in ec2 docs

PR #24328: (*dr4Ke*) Fix state grains silently fails 2015.5 *@ 2015-06-02T15:18:46Z*

- 89cdf97 Merge pull request #24136 from rallytime/bp-24104
- c538884 Only try to stop a VM if it's not already stopped. (fixes #23364)

PR #24135: (*rallytime*) Backport #24083 to 2015.5 @ *2015-05-26T15:58:27Z*

PR #24083: (*swdream*) fix code block syntax

refs: #24135

- 67c4373 Merge pull request #24135 from rallytime/bp-24083
- e1d06f9 fix code block syntax

PR #24131: (*jayeshka*) adding states/mysql_user unit test case @ *2015-05-26T15:58:10Z*

- a83371e Merge pull request #24131 from jayeshka/mysql_user-states-unit-test
- ed1ef69 adding states/mysql_user unit test case

PR #24130: (*jayeshka*) adding states/ntp unit test case *@ 2015-05-26T15:57:29Z*

- 1dc1d2a Merge pull request #24130 from jayeshka/ntp-states-unit-test
- ede4a9f adding states/ntp unit test case

PR #24128: (*jayeshka*) adding states/openstack_config unit test case *@ 2015-05-26T15:56:08Z*

- 3943417 Merge pull request #24128 from jayeshka/openstack_config-states-unit-test
- ca09e0f adding states/openstack_config unit test case

PR #24127: (*jayeshka*) adding states/npm unit test case *@ 2015-05-26T15:55:18Z*

- 23f25c4 Merge pull request #24127 from jayeshka/npm-states-unit-test
- c3ecabb adding states/npm unit test case

PR #24077: (*anlutro*) Change how state_verbose output is filtered *@ 2015-05-26T15:41:11Z*

ISSUE #24009: (*hvnsweeting*) state_verbose False summary is wrong

refs: #24077

- 07488a4 Merge pull request #24077 from alprs/fix-outputter_highstate_nonverbose_count
- 7790408 Change how state_verbose output is filtered

PR #24119: (*jfindlay*) Update contrib docs *@ 2015-05-26T15:37:01Z*

- 224820f Merge pull request #24119 from jfindlay/update_contrib_docs
- fa2d411 update example release branch in contrib docs
- a0b76b5 clarify git rebase instructions
- 3517e00 fix contribution docs link typos
- 651629c backport dev contrib doc updates to 2015.5

PR #23928: (*joejulian*) Add the ability to replace existing certificates *@ 2015-05-25T19:47:26Z*

- 5488c4a Merge pull request #23928 from joejulian/2015.5_tls_module_replace_existing
- 4a4cbdd Add the ability to replace existing certificates

PR #24078: (*jfindlay*) if a charmap is not supplied, set it to the codeset *@ 2015-05-25T19:39:19Z*

ISSUE #23221: (*Reiner030*) Debian Jessie: locale.present not working again

refs: #24078

- dd90ef0 Merge pull request #24078 from jfindlay/locale_charmap
- 5eb97f0 if a charmap is not supplied, set it to the codeset

PR #24088: (*jfindlay*) pkg module integration tests *@ 2015-05-25T19:39:02Z*

- 9cec5d3 Merge pull request #24088 from jfindlay/pkg_tests
- f1bd5ec adding pkg module integration tests
- 739b2ef rework yumpkg refresh_db so args are not mandatory

PR #24089: (*jfindlay*) allow override of binary file mode on windows *@ 2015-05-25T19:38:44Z*

ISSUE #24052: (*twangboy*) v2015.5.1 Changes the way it interprets the minion_master.pub file

refs: #24089 #24144

- 517552c Merge pull request #24089 from jfindlay/binary_write

- b2259a6 allow override of binary file mode on windows

PR #24092: (*jfindlay*) collect scattered contents edits, ensure it's a str *@ 2015-05-25T19:38:10Z*

ISSUE #23973: (*mschiff*) state file.managed: setting contents_pillar to a pillar which is a list throws exception instead givin

refs: #24092

- 121ab9f Merge pull request #24092 from jfindlay/file_state
- cfa0f13 collect scattered contents edits, ensure it's a str

PR #24112: (*The-Loeki*) thin_gen breaks when thinver doesn't exist *@ 2015-05-25T19:37:47Z*

- 4d6ab21 Systemd not recognized properly on Oracle Linux 7

PR #24090: (*jfindlay*) adding states/mount unit test case *@ 2015-05-22T23:02:57Z*

PR #24062: (*jayeshka*) adding states/mount unit test case

refs: #24090

- 8e04db7 Merge pull request #24090 from jfindlay/merge_24062
- a81a922 adding states/mount unit test case

PR #24086: (*rallytime*) Backport #22806 to 2015.5 *@ 2015-05-22T21:18:20Z*

ISSUE #22574: (*unicolet*) error when which is not available

refs: #22806

PR #22806: (*jfindlay*) use cmd.run_all instead of cmd.run_stdout

refs: #24086

- c0079f5 Merge pull request #24086 from rallytime/bp-22806
- f728f55 use cmd.run_all instead of cmd.run_stdout

PR #24024: (*jayeshka*) adding states/mongodb_user unit test case *@ 2015-05-22T20:53:19Z*

- 09de253 Merge pull request #24024 from jayeshka/mongodb_user-states-unit-test
- f31dc92 resolved errors
- d038b1f adding states/mongodb_user unit test case

PR #24065: (*kiorky*) continue to fix #23883

refs: #24080 #24066

@ 2015-05-22T18:59:21Z

ISSUE #23883: (*kaithar*) max_event_size seems broken * bfd812c Merge pull request #24065 from makinacorpus/real23883 * 028282e continue to fix #23883

PR #24029: (*kiorky*) Fix providers handling *@ 2015-05-22T16:56:06Z*

ISSUE #24017: (*arthurlogilab*) [salt-cloud openstack] TypeError: unhashable type: `dict' on map creation

refs: #24029

- 429adfe Merge pull request #24029 from makinacorpus/fixproviders
- 412b39b Fix providers handling

PR #23936: (*jfindlay*) remove unreachable returns in file state *@ 2015-05-22T16:26:49Z*

- a42cccc Merge pull request #23936 from jfindlay/file_state
- ac29c0c also validate file.recurse source parameter
- 57f7388 remove unreachable returns in file state

PR #24063: (*jayeshka*) removed tuple index error *@ 2015-05-22T14:58:20Z*

- 8b69b41 Merge pull request #24063 from jayeshka/mount-states-module
- b9745d5 removed tuple index error

PR #24057: (*rallytime*) Backport #22572 to 2015.5 *@ 2015-05-22T05:36:25Z*

PR #22572: (*The-Loeki*) Small docfix for GitPillar

refs: #24057

- 02ac4aa Merge pull request #24057 from rallytime/bp-22572
- 49aad84 Small docfix for GitPillar

PR #24040: (*rallytime*) Backport #24027 to 2015.5 @ *2015-05-21T23:43:54Z*

ISSUE #23088: (*wfhg*) Segfault when adding a Zypper repo on SLES 11.3

refs: #24027

PR #24027: (*wfhg*) Add baseurl to salt.modules.zypper.mod_repo

refs: #24040

- 82de059 Merge pull request #24040 from rallytime/bp-24027
- 37d25d8 Added baseurl as alias for url and mirrorlist in salt.modules.zypper.mod_repo.

PR #24039: (*rallytime*) Backport #24015 to 2015.5 @ *2015-05-21T23:43:25Z*

PR #24015: (*YanChii*) minor improvement of solarisips docs & fix typos

refs: #24039

- d909781 Merge pull request #24039 from rallytime/bp-24015
- 6bfaa94 minor improvement of solarisips docs & fix typos

PR #24038: (*rallytime*) Backport #19599 to 2015.5 @ *2015-05-21T23:43:10Z*

ISSUE #19598: (*fayetted*) ssh_auth.present test=true incorectly reports changes will be made

refs: #19599

PR #19599: (*fayetted*) Fix ssh_auth test mode, compare lines not just key

refs: #24038

- 4a0f254 Merge pull request #24038 from rallytime/bp-19599
- ea00d3e Fix ssh_auth test mode, compare lines not just key

PR #24046: (*rallytime*) Remove key management test from digital ocean cloud tests @ *2015-05-21T22:32:04Z*

- 42b87f1 Merge pull request #24046 from rallytime/remove_key_test
- 1d031ca Remove key management test from digital ocean cloud tests

PR #24044: (*cro*) Remove spurious log message, fix typo in doc @ *2015-05-21T22:31:49Z*

- eff54b1 Merge pull request #24044 from cro/pgjsonb
- de06633 Remove spurious log message, fix typo in doc

PR #24001: (*msteed*) issue #23883 @ *2015-05-21T20:32:30Z*

ISSUE #23883: (*kaithar*) max_event_size seems broken * ac32000 Merge pull request #24001 from msteed/issue-23883 * bea97a8 issue #23883

PR #23995: (*kiorky*) Lxc path pre @ *2015-05-21T17:26:03Z*

- f7fae26 Merge pull request #23995 from makinacorpus/lxc_path_pre
- 319282a lint
- 1dc67e5 lxc: versionadded
- fcad7cb lxc: states improvements
- 644bd72 lxc: more consistence for profiles

- 139372c lxc: remove merge cruft
- 725b046 lxc: Repair merge

PR #24032: (*kartiksubbarao*) Update augeas_cfg.py *@ 2015-05-21T17:03:42Z*

ISSUE #16383: (*interjection*) salt.states.augeas.change example from docs fails with exception

refs: #24032

- 26d6851 Merge pull request #24032 from kartiksubbarao/augeas_insert_16383
- 3686dcd Update augeas_cfg.py

PR #24025: (*jayeshka*) adding timezone unit test case *@ 2015-05-21T16:50:53Z*

- 55c9245 Merge pull request #24025 from jayeshka/timezone-unit-test
- 1ec33e2 removed assertion error
- 16ecb28 adding timezone unit test case

PR #24023: (*jayeshka*) adding states/mongodb_database unit test case *@ 2015-05-21T16:49:17Z*

- e243617 Merge pull request #24023 from jayeshka/mongodb_database-states-unit-test
- 5a9ac7e adding states/mongodb_database unit test case

PR #24022: (*jayeshka*) adding states/modjk_worker unit test case *@ 2015-05-21T16:48:29Z*

- b377bd9 Merge pull request #24022 from jayeshka/modjk_worker-states-unit-test
- 05c0a98 adding states/modjk_worker unit test case

PR #24005: (*msteed*) issue #23776 *@ 2015-05-21T01:55:34Z*

ISSUE #23776: (*enblde*) Presence change events constantly reporting all minions as new in 2015.5 * 701c51b Merge pull request #24005 from msteed/issue-23776 * 62e67d8 issue #23776

PR #23996: (*neogenix*) iptables state generates a 0 position which is invalid in iptables cli #23950 *@ 2015-05-20T22:44:27Z*

ISSUE #23950: (*neogenix*) iptables state generates a 0 position which is invalid in iptables cli

refs: #23996

- 17b7c0b Merge pull request #23996 from neogenix/2015.5-23950
- ad417a5 fix for #23950

PR #23994: (*rallytime*) Skip the gpodder pkgrepo test for Ubuntu 15 - they don't have vivid ppa up yet *@ 2015-05-20T21:18:21Z*

- 4cb8773 Merge pull request #23994 from rallytime/skip_test_ubuntu_15
- 9e0ec07 Skip the gpodder pkgrepo test - they don't have vivid ppa up yet

20.2.40 Salt 2015.5.3 Release Notes

Extended Changelog Courtesy of Todd Stansell (https://github.com/tjstansell/salt-changelogs):

Statistics:

- Total Merges: **177**
- Total Issue references: **81**

- Total PR references: **231**

Changes:

- **PR** #25096: (*jfindlay*) Postgres group test @ *2015-07-01T18:48:26Z*
  - **PR** #24330: (*jayeshka*) adding states/postgres_group unit test case. | refs: #25096
  - 21709aa Merge pull request #25096 from jfindlay/postgres_group_test
  - 3c379dc declobber postgres state unit test mocking
  - a162ffa adding states/postgres_group unit test case.
- **PR** #25085: (*jfindlay*) accept all sources in the file state @ *2015-07-01T18:23:45Z*
  - **ISSUE** #25041: (*wt*) REGRESSION: pillar.get of integer fails to render in sls | refs: #25085
  - 0a84640 Merge pull request #25085 from jfindlay/fix_file
  - 937a252 remove unnecessary file state tests
  - 6f238e9 integration test file.managed sources
  - a5978d3 iterate an iterable source othwerise list+str it
- **PR** #25095: (*jfindlay*) Win groupadd unit tests @ *2015-07-01T18:18:53Z*
  - **PR** #24207: (*jayeshka*) adding win_groupadd unit test case. | refs: #25095
  - a983942 Merge pull request #25095 from jfindlay/win_groupadd_test
  - 564dffd depend on win libs rather than mocking them
  - 9b9aeb8 resolved all errors.
  - aaf8935 adding win_groupadd unit test case.
- **PR** #25089: (*jfindlay*) fix minion sudo @ *2015-07-01T15:53:16Z*
  - **ISSUE** #21520: (*jfindlay*) sudo.salt_call is broken | refs: #25089
  - **PR** #20226: (*thatch45*) Allow sudo priv escalation | refs: #25089
  - 7c8d2a8 Merge pull request #25089 from jfindlay/fix_sudo
  - d8f91d4 add some apprehension to the sudo exec module
  - a9269c0 adding sudo exec module docs
  - e4a40b7 comment whitespace in minion config
  - 44cb167 adding sudo_user minion config docs
  - d461060 adding sudo_user minion config to default
- **PR** #25099: (*driskell*) Fix broken batch results @ *2015-07-01T15:51:29Z*
  - **ISSUE** #24875: (*ahammond*) ValueError: list.remove(x): x not in list in File ``/usr/lib/python2.6/site-packages/salt/cli/batch.py'', line 179, in run active.remove(minion) | refs: #25099
  - 4d6078e Merge pull request #25099 from driskell/patch-1
  - 59b23e5 Fix broken batch results
- **PR** #25083: (*steverweber*) ipmi: get_sensor_data would always fail @ *2015-06-30T20:57:21Z*
  - 4635079 Merge pull request #25083 from steverweber/fix_ipmi_stat
  - 836f48c include _ in IpmiCommand

  - 817e434 get_sensor_data would always fail
- **PR** #25067: (*The-Loeki*) Fix for maxdepth=0 in find @ *2015-06-30T20:54:06Z*
  - 15f2a40 Merge pull request #25067 from The-Loeki/patch-1
  - 61edad3 Fix for maxdepth=0 in find
- **PR** #25078: (*terminalmage*) Use smaller number for upper limit of mac_user's _first_avail_uid helper function @ *2015-06-30T20:53:24Z*
  - 58d933c Merge pull request #25078 from terminalmage/fix-mac-uid
  - df2ab7e Use smaller number for upper limit of mac_user's _first_avail_uid helper function
- **PR** #25045: (*garethgreenaway*) Fixes to debian_ip.py in 2015.5 @ *2015-06-30T17:36:43Z*
  - **ISSUE** #24521: (*multani*) State network.managed fails on Debian (Jessie) | refs: #25045
  - ebd6cdc Merge pull request #25045 from garethgreenaway/24521_debian_networking
  - 6f2a6c9 having proto default to static since it's needed to build the template.
- **PR** #25065: (*lorengordon*) Add download links for 2015.5.1-3 and 2015.5.2 Windows installers @ *2015-06-30T15:29:31Z*
  - **ISSUE** #25057: (*TheBigBear*) why is there still no newer salt-minion for windows than ver. 2015.5.0-2? no 2015.5.1 or 2015.5.2?
  - ae31b27 Merge pull request #25065 from lorengordon/update-windows-installer-links
  - 40a0c13 Add download links for 2015.5.1-3 and 2015.5.2, Fixes #25057
- **PR** #25052: (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5 @ *2015-06-30T01:05:00Z*
  - **ISSUE** #15209: (*hubez*) file.manage: source_hash not working with s3:// (2014.7.0rc1) | refs: #25011
  - **PR** #25011: (*notpeter*) Add s3 to protocols for remote source_hash (2014.7 backport)
  - ddaeb0f Merge pull request #25052 from basepi/merge-forward-2015.5
  - 2c5e664 Merge remote-tracking branch `upstream/2014.7' into merge-forward-2015.5
  - a7154e7 Merge pull request #25011 from notpeter/s3_2014.7_backport
    - 8b8af64 Add s3 to protocols for remote source_hash
- **PR** #25038: (*jfindlay*) versionadded @ *2015-06-29T19:49:27Z*
  - **PR** #24747: (*msciciel*) add get_route function to network module | refs: #25038
  - c7003d4 Merge pull request #25038 from jfindlay/versionadded
  - d6dc6f9 versionadded
- **PR** #24747: (*msciciel*) add get_route function to network module | refs: #25038 @ *2015-06-29T16:51:43Z*
  - 28c87ca Merge pull request #24747 from msciciel/2015.5
  - 79b4ec2 network module lint fix
  - 0b6ef78 network module: fix for ipv6
  - f3d184c add get_route function to network module
- **PR** #24975: (*ryan-lane*) Fix update of undefined env var in npm module @ *2015-06-29T16:45:05Z*
  - 46a9677 Merge pull request #24975 from lyft/npm-module-fix
  - 6fde581 Try byte literals rather than unicode strings in the env

  - c8514de Fix update of undefined env var in npm module
- **PR** #24986: (*heewa*) Don't modify empty change @ *2015-06-29T16:44:17Z*
  - 9cf8550 Merge pull request #24986 from heewa/fix-pkg-hold-when-errored
  - d47a448 Don't modify empty change
- **PR** #24999: (*rallytime*) Provide a less confusing error when cloud provider is misconfigured @ *2015-06-29T16:43:31Z*
  - **ISSUE** #24969: (*bradthurber*) salt-cloud 2015.5.0: missing azure dependency results in misleading error | refs: #24999
  - ece897d Merge pull request #24999 from rallytime/cloud_error_help
  - 1e81a88 Clean up
  - be19a67 Provide a less confusing error when cloud provider is misconfigured
- **PR** #24987: (*heewa*) Don't try to cache a template when it's not a file @ *2015-06-29T14:02:59Z*
  - 4af15cf Merge pull request #24987 from heewa/fix-trying-to-cache-no-file
  - 9ae0c78 Don't try to cache a template when it's not a file
- **PR** #25022: (*jfindlay*) revise label and milestone documentation @ *2015-06-29T13:51:24Z*
  - 8eeaddb Merge pull request #25022 from jfindlay/label_docs
  - 8575192 revise label and milestone documentation
- **PR** #25029: (*jayeshka*) adding redismod unit test case. @ *2015-06-29T13:50:33Z*
  - 89c2e01 Merge pull request #25029 from jayeshka/redismod-unit-test
  - e3045be adding redismod unit test case.
- **PR** #24995: (*rallytime*) Fix deprecated pymongo usage causing errors in latest pymongo @ *2015-06-27T22:28:56Z*
  - **PR** #24175: (*trevor-h*) fix deprecated pymongo usage causing errors in latest pymongo | refs: #24995
  - 6425252 Merge pull request #24995 from rallytime/tops_mongo
  - a3c1063 fix deprecated pymongo usage causing errors in latest pymongo
- **PR** #24994: (*garethgreenaway*) Another Fix to gpg.py in 2015.5 @ *2015-06-27T22:28:15Z*
  - **ISSUE** #24862: (*dkatsanikakis*) gpg.import_key returns error after successfully completed | refs: #24966 #24994
  - e9aaa11 Merge pull request #24994 from garethgreenaway/2015_5_24862_gpg_import_key
  - d2f0d8f variable was referenced before assignment. Just removing the variable and checking the return from distutils.version.LooseVersion directly.
- **PR** #24988: (*jayeshka*) adding states/supervisord unit test case. @ *2015-06-27T22:24:42Z*
  - ebd666e Merge pull request #24988 from jayeshka/supervisord-states-unit-test
  - bb0a6d5 adding states/supervisord unit test case.
- **PR** #25007: (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5 @ *2015-06-26T21:28:57Z*
  - **ISSUE** #24915: (*jtand*) Salt-cloud not working in 2014.7.6 | refs: #24944
  - **PR** #24944: (*techhat*) Double-check main_cloud_config
  - **PR** #24936: (*jtand*) Fixed ps module to not use depreciated psutil commands

  - 0487c3c Merge pull request #25007 from basepi/merge-forward-2015.5
  - 4980fd5 Merge remote-tracking branch `upstream/2014.7' into merge-forward-2015.5
  - a11e4c6 Merge pull request #24944 from techhat/issue24915
    - 59c3081 Double-check main_cloud_config
  - d26a544 Merge pull request #24936 from jtand/psutil
    - bdb7a19 Fixed ps module to not use depreciated psutil commands
- **PR** #25003: (*jacobhammons*) Updated man pages @ *2015-06-26T19:13:41Z*
  - 91a60e1 Merge pull request #25003 from jacobhammons/man-pages
  - cf97a4a Updated man pages
- **PR** #25002: (*jacobhammons*) sphinx html theme updates @ *2015-06-26T18:39:14Z*
  - a60a2c4 Merge pull request #25002 from jacobhammons/doc-announcements
  - f88f344 sphinx html theme updates
- **PR** #24977: (*rallytime*) Only warn about digital ocean deprecation if digital ocean is configured @ *2015-06-25T23:54:46Z*
  - a791b23 Merge pull request #24977 from rallytime/do_move_warning
  - 6b54422 Only warn about digital ocean deprecation if digital ocean is configured
- **PR** #24966: (*garethgreenaway*) Fixes to gpg.py in 2015.5 @ *2015-06-25T19:58:49Z*
  - **ISSUE** #24862: (*dkatsanikakis*) gpg.import_key returns error after successfully completed | refs: #24966 #24994
  - a71c1b7 Merge pull request #24966 from garethgreenaway/2015_5_24862_gpg_import_key
  - 55eb73b fixing unit tests.
  - 80c24be Fixing an issue with the import_key method. Different results depending on which gnupg python module is installed.
- **PR** #24965: (*jacksontj*) Fix memory leak in saltnado @ *2015-06-25T18:48:03Z*
  - **ISSUE** #24846: (*mavenAtHouzz*) Memory leak issue in rest_tornado EventListener | refs: #24965
  - 8622184 Merge pull request #24965 from jacksontj/2015.5
  - 48b5e16 pylint
  - 87adca4 Fix memory leak in saltnado
- **PR** #24948: (*jfindlay*) fix some malformed doc links and anchors @ *2015-06-25T15:51:38Z*
  - 773c4cf Merge pull request #24948 from jfindlay/doc_links
  - 152a9b2 fix some malformed doc links and anchors
- **PR** #24886: (*anlutro*) Be more careful about stripping away root_dir from directory options @ *2015-06-25T15:50:11Z*
  - **ISSUE** #24885: (*anlutro*) Master config - Directories starting with a dot have the dot stripped when root_dir is . | refs: #24886
  - 4ebc01e Merge pull request #24886 from alprs/fix-root_dir_bug
  - 52ccafd os.sep is the correct directory separator constant
  - 0ecbf26 Be more careful about stripping away root_dir from directory options

- **PR** #24930: (*jacksontj*) Don't refetch file templates 100% of the time-- Performance optimization for templated files @ *2015-06-24T21:22:47Z*
  - f52f7e1 Merge pull request #24930 from jacksontj/2015.5
  - 5fb7534 Only parse the source if we have one
  - c03a6fa Add support for sources of managed files to be local
  - 4cf78a0 pylint
  - d70914e Don't refetch the template 100% of the time-- Performance optimization for templated files
- **PR** #24935: (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5 @ *2015-06-24T18:17:54Z*
  - **PR** #24918: (*BretFisher*) SmartOS SMF minion startup fix
  - **PR** #473: (*whiteinge*) Added a couple functions to work with the minion file cache | refs: #24918
  - 925a4d9 Merge pull request #24935 from basepi/merge-forward-2015.5
  - 8d8bf34 Merge remote-tracking branch `upstream/2014.7' into merge-forward-2015.5
  - eeb05a1 Merge pull request #24918 from BretFisher/minion-start-smartos-smf-fix
    - d7bfb0c Smartos smf minion fix
- **PR** #24873: (*jfindlay*) convert osrelease grain to str before str op @ *2015-06-24T16:43:08Z*
  - **ISSUE** #24826: (*rakai93*) rh_service.py: `int' object has no attribute `startswith' | refs: #24873
  - 4e8ed0d Merge pull request #24873 from jfindlay/rh_service
  - febe6ef convert osrelease grain to str before str op
- **PR** #24923: (*jayeshka*) adding states/status unit test case. @ *2015-06-24T15:50:07Z*
  - 90819f9 Merge pull request #24923 from jayeshka/status-states-unit-test
  - baec650 adding states/status unit test case.
- **PR** #24902: (*cro*) Fix minion failover, document same @ *2015-06-24T15:20:43Z*
  - 2dd24ec Merge pull request #24902 from cro/fixfo2
  - 90c73ff References to documentation.
  - f0c9204 Add references to failover parameters in conf
  - 9da96a8 Docs
  - e2314f0 Move comment.
  - b9a756f Fix master failover and add documentation for same. Factor in syndics. Syndics will not failover (yet).
- **PR** #24926: (*rallytime*) Back-port #22263 to 2015.5 @ *2015-06-24T15:09:40Z*
  - **PR** #22263: (*cachedout*) Prevent a load from being written if one already exists | refs: #24926
  - 087ee09 Merge pull request #24926 from rallytime/bp-22263
  - 8c92d9c Prevent a load from being written if one already exists
- **PR** #24900: (*rallytime*) Back-port #24848 to 2015.5 @ *2015-06-24T15:09:18Z*
  - **PR** #24848: (*nmadhok*) Correcting bash code blocks | refs: #24900
  - b34a74f Merge pull request #24900 from rallytime/bp-24848
  - d2b5456 Correcting bash code blocks

- **PR** #24899: (*rallytime*) Back-port #24847 to 2015.5 @ *2015-06-24T15:09:01Z*
  - **PR** #24847: (*borutmrak*) unset size parameter for lxc.create when backing=zfs | refs: #24899
  - a546e8e Merge pull request #24899 from rallytime/bp-24847
  - 1e4ec7a unset size parameter for lxc.create when backing=zfs
- **PR** #24898: (*rallytime*) Back-port #24845 to 2015.5 @ *2015-06-24T15:06:09Z*
  - **PR** #24845: (*porterjamesj*) fix bug in docker.loaded | refs: #24898
  - d4dd8d2 Merge pull request #24898 from rallytime/bp-24845
  - 071049a fix bug in docker.loaded
- **PR** #24897: (*rallytime*) Back-port #24839 to 2015.5 @ *2015-06-24T15:05:35Z*
  - **ISSUE** #24799: (*infestdead*) Forced remount because options changed when no options changed (glusterfs)
  - **PR** #24839: (*infestdead*) fix for issue #24799 | refs: #24897
  - 6930855 Merge pull request #24897 from rallytime/bp-24839
  - f3b20d5 fix for issue #24799
- **PR** #24891: (*jayeshka*) adding states/ssh_known_hosts unit test case. @ *2015-06-23T16:46:58Z*
  - 1650233 Merge pull request #24891 from jayeshka/ssh_known_hosts-states-unit-test
  - ef1347f adding states/ssh_known_hosts unit test case.
- **PR** #24874: (*dkiser*) Fix for salt-cloud when ssh key used to auth and using sudo. @ *2015-06-22T23:46:08Z*
  - **ISSUE** #24870: (*dkiser*) salt-cloud fails on sudo password prompt when using ssh key to auth | refs: #24874
  - c32aae9 Merge pull request #24874 from dkiser/salt-cloud-24870
  - 6c31143 Fix key error for the PR to fix #24870.
  - bdcf7d8 Fix pylint for #24874.
  - 8f66d19 Fix for salt-cloud when ssh key used to auth and using sudo.
- **PR** #24880: (*dkiser*) Fix to allow password for salt-cloud to be set outside of a vm specif… @ *2015-06-22T23:44:59Z*
  - **ISSUE** #24871: (*dkiser*) salt-cloud fails to honor `password' in cloud options before raising an exception | refs: #24880
  - ddaa21c Merge pull request #24880 from dkiser/salt-cloud-24871
  - 4f6c035 Fix to allow password for salt-cloud to be set outside of a vm specific context.
- **PR** #24852: (*pruiz*) Fix issue 24851: regular expression so it now matches packages with `.' or `-` at pkg name @ *2015-06-22T20:37:13Z*
  - 3902b16 Merge pull request #24852 from pruiz/issue-24851
  - 73adb1d Fix regular expression so it now matches packages with `.' or `-` at pkg name.
- **PR** #24861: (*jayeshka*) adding states/ssh_auth unit test case. @ *2015-06-22T16:20:01Z*
  - 6c5b788 Merge pull request #24861 from jayeshka/ssh_auth-states-unit-test
  - e5d7b0d adding states/ssh_auth unit test case.
- **PR** #24824: (*kev009*) Detect bhyve virtual type for FreeBSD guests @ *2015-06-22T15:24:35Z*

  - **ISSUE** #23478: (*calvinhp*) grains.get virtual reports ``physical'' on bhyve FreeBSD VM | refs: #24824
  - 9e3321c Merge pull request #24824 from kev009/grains-bhyve-bsd
  - a226209 Detect bhyve virtual type for freebsd guests
- **PR** #24795: (*anlutro*) Fix state.apply for salt-ssh @ *2015-06-22T15:23:57Z*
  - **ISSUE** #24746: (*anlutro*) state.apply doesn't seem to work | refs: #24795
  - 7b07ef9 Merge pull request #24795 from alprs/fix-salt_ssh_state_apply
  - 905840b Fix state.apply for salt-ssh
- **PR** #24832: (*jacksontj*) Don't incur a ``_load_all'' of the lazy_loader while looking for mod_init. @ *2015-06-22T15:17:10Z*
  - **PR** #20540: (*jacksontj*) Loader nomerge: Don't allow modules to ``merge'' | refs: #24832
  - **PR** #20481: (*jacksontj*) Add submodule support to LazyLoader | refs: #20540
  - **PR** #20473: (*jacksontj*) Add ``disabled'' support | refs: #20481
  - **PR** #20274: (*jacksontj*) Loader overhaul to LazyLoader | refs: #20473
  - **PR** #12327: (*jacksontj*) Add a LazyLoader class which will lazily load modules (with the given lo... | refs: #20274
  - 31d4c13 Merge pull request #24832 from jacksontj/2015.5
  - cfa7c0a pylint
  - be18439 Don't incur a ``_load_all'' of the lazy_loader while looking for mod_init.
- **PR** #24834: (*rallytime*) Back-port #24811 to 2015.5 @ *2015-06-19T18:43:49Z*
  - **ISSUE** #14666: (*luciddr34m3r*) salt-cloud GoGrid exception when using map file | refs: #24811
  - **PR** #24811: (*rallytime*) Add notes to map and gogrid docs -- don't use -P with map files | refs: #24834
  - 2d8148f Merge pull request #24834 from rallytime/bp-24811
  - e2684ec Add notes to map and gogrid docs -- don't use -P with map files
- **PR** #24790: (*rallytime*) Back-port #24741 to 2015.5 @ *2015-06-19T17:25:58Z*
  - **PR** #24741: (*CameronNemo*) Improve Upstart enable/disable handling | refs: #24790
  - d2edb63 Merge pull request #24790 from rallytime/bp-24741
  - a54245f Add missing import
  - 4ce6370 salt.modules.upstart: fix lint errors
  - aec53ec Improve Upstart enable/disable handling
- **PR** #24789: (*rallytime*) Back-port #24717 to 2015.5 @ *2015-06-19T17:17:00Z*
  - **PR** #24717: (*gthb*) virtualenv.managed: document user and no_chown | refs: #24789
  - 645e62a Merge pull request #24789 from rallytime/bp-24717
  - 95ac4eb virtualenv.managed: document user and no_chown
- **PR** #24823: (*jayeshka*) adding states/splunk_search unit test case. @ *2015-06-19T17:14:12Z*
  - 0a6c70f Merge pull request #24823 from jayeshka/splunk_search-states-unit-test
  - 98831a8 adding states/splunk_search unit test case.

- **PR** #24809: (*jodv*) Correctly create single item list for failover master type with string value for master opt @ *2015-06-19T15:22:20Z*
  - 4c5a708 Merge pull request #24809 from jodv/single_item_master_list
  - 18ceebc single item list vs. list of characters
- **PR** #24802: (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5 @ *2015-06-18T20:11:58Z*
  - **ISSUE** #24776: (*nmadhok*) --static option in salt raises ValueError and has been broken for a very long time | refs: #24777

  - 39f088a Merge pull request #24778 from nmadhok/backport-2015.2-24777
  - ae3701f Backporting PR #24777 to 2015.2 branch
- **PR** #24774: (*zefrog*) Fix lxc lvname parameter command @ *2015-06-18T14:49:06Z*
  - 2a4f65f Merge pull request #24774 from zefrog/fix-lxc-lvname-param
  - 21e0cd4 Fixed typo in lxc module: lvname parameter typo
  - 283d86e Fixed bug in lxc module: lvname using wrong parameter in cmd
- **PR** #24782: (*jayeshka*) adding states/slack unit test case. @ *2015-06-18T14:33:55Z*
  - fd73390 Merge pull request #24782 from jayeshka/slack-states-unit-test
  - e2b6214 adding states/slack unit test case.
- **PR** #24771: (*jacksontj*) Always extend requisites, instead of replacing them @ *2015-06-18T14:29:09Z*
  - **ISSUE** #24770: (*jacksontj*) *Requisite* and *Requisite_in* don't play nice together | refs: #24771
  - c9c90af Merge pull request #24771 from jacksontj/2015.5
  - b1211c5 Re-enable tests for complex prereq and prereq_in
  - 378f6bf Only merge when the merge is of requisites
- **PR** #24766: (*msteed*) Remove doc references to obsolete minion opt @ *2015-06-17T21:36:55Z*
  - 5fe4de8 Merge pull request #24766 from msteed/undoc-dns_check
  - f92a769 Remove doc references to obsolete minion opt
- **PR** #24329: (*jayeshka*) adding states/postgres_database unit test case. | refs: #24798 @ *2015-06-17T19:11:02Z*

  - a407ab7 Merge pull request #24329 from jayeshka/postgres_database-states-unit-test
  - ee06f1a adding states/postgres_database unit test case.
- **PR** #24632: (*jacobhammons*) Doc bug fixes @ *2015-06-17T18:40:02Z*
  - **ISSUE** #24560: (*hydrosine*) Documentation missing on parameter | refs: #24632
  - **ISSUE** #24547: (*dragonpaw*) Artifactory docs say module is `jboss7'. | refs: #24632
  - **ISSUE** #24375: (*companykitchen-dev*) Custom grain won't sync under any circumstances | refs: #24632
  - **ISSUE** #24275: (*kartiksubbarao*) augeas issue with apache and recognizing changes that have been already made | refs: #24632
  - **ISSUE** #24163: (*tbaker57*) enable_gpu_grains default value confusion | refs: #24632
  - 3ff6eff Merge pull request #24632 from jacobhammons/bug-fixes
  - 7c52012 Fixed typos
  - c7cdd41 Doc bug fixes Refs #24547 Refs #24275 Refs #24375 Refs #24560 Refs #24163
- **PR** #24607: (*garethgreenaway*) fixes to minion.py @ *2015-06-17T18:16:42Z*
  - **ISSUE** #24198: (*ahammond*) salt-call event.send doesn't send events from minion | refs: #24607
  - 9995f64 Merge pull request #24607 from garethgreenaway/2015_5_sending_events_multi_master
  - 8abd3f0 A fix if you have multiple masters configured and try to fire events to the minion. Currently they fail silently. Might be the cause of #24198.
- **PR** #24755: (*rallytime*) Remove SALT_CLOUD_REQS from setup.py @ *2015-06-17T17:42:25Z*
  - bf2dd94 Merge pull request #24755 from rallytime/fix_setup_15
  - 48769a5 Remove SALT_CLOUD_REQS from setup.py
- **PR** #24740: (*rallytime*) Backport #24720 to 2015.5 @ *2015-06-17T16:43:37Z*
  - **PR** #24720: (*TheScriptSage*) Issue 24621 - AD/LDAP Group Auth Issue | refs: #24740
  - 3d53d79 Merge pull request #24740 from rallytime/bp-24720
  - a9bcdb5 Updating master.py to properly check against groups when user is only authed against group. Tested against unit.auth_test.
- **PR** #24723: (*rallytime*) Back-port #20124 to 2015.5 @ *2015-06-17T16:43:20Z*
  - **PR** #20124: (*cgtx*) add init system to default grains | refs: #24723
  - ac2851b Merge pull request #24723 from rallytime/bp-20124
  - 4d0061b fix infinite loop introduced by #20124 when the init system is not in the supported_inits list
  - 0c7fa0f Optimizations for #20124
  - f353454 add init system to default grains (resolve #20124)
- **PR** #24754: (*anlutro*) salt-cloud documentation - Add information about linode location @ *2015-06-17T16:04:48Z*
  - 78cd09b Merge pull request #24754 from alprs/docs-add_linode_location_option
  - d88e071 add information about linode location
- **PR** #24748: (*jayeshka*) adding states/serverdensity_device unit test case. @ *2015-06-17T15:39:07Z*
  - d5554f7 Merge pull request #24748 from jayeshka/serverdensity_device-states-unit-test

  - 1a4c241 adding states/serverdensity_device unit test case.
- **PR** #24739: (*rallytime*) Back-port #24735 to 2015.5 @ *2015-06-17T15:16:47Z*
  - **PR** #24735: (*notpeter*) Add 2015.5 codename to version numbers docs | refs: #24739
  - 0b7e7ef Merge pull request #24739 from rallytime/bp-24735
  - 64c565d Add .0 to version number
  - 5ed801b Add codenames for 2015.5 and future versions. Trailing newline.
- **PR** #24732: (*msteed*) Fix stacktrace when *--summary* is used @ *2015-06-17T03:27:57Z*
  - **ISSUE** #24111: (*yermulnik*) cli option `--summary' got broken after upgrade to 2015.5.1 | refs: #24732
  - c8713f2 Merge pull request #24732 from msteed/issue-24111
  - 54b33dd Fix stacktrace when --summary is used
- **PR** #24721: (*rallytime*) Back-port #24668 to 2015.5 @ *2015-06-17T03:23:47Z*
  - **PR** #24668: (*grischa*) enable virtual package names in pyobjects renderer | refs: #24721 #24757
  - 70d3781 Merge pull request #24721 from rallytime/bp-24668
  - 68fb5af fixing other test
  - ba4f262 fixing text for virtual support in pyobjects
  - b349d91 enable virtual package names in pyobjects renderer
- **PR** #24718: (*rallytime*) Added some missing config documentation to the vsphere driver @ *2015-06-17T03:19:35Z*
  - **ISSUE** #21923: (*Fluro*) Salt cloud not running provisioning script as root | refs: #24718
  - **ISSUE** #17241: (*hasues*) Salt-Cloud for vSphere needs additional documentation | refs: #24718
  - 1b9d689 Merge pull request #24718 from rallytime/update_vsphere_docs
  - bfdebb6 Added some missing config documentation to the vsphere driver
- **PR** #24714: (*rallytime*) Remove cloud-requirements.txt @ *2015-06-17T03:17:04Z*
  - 64857c7 Merge pull request #24714 from rallytime/remove_cloud_reqs_15
  - 67b796d Remove cloud-requirements.txt
- **PR** #24733: (*msteed*) Include Tornado in versions report @ *2015-06-17T03:13:53Z*
  - **ISSUE** #24439: (*bechtoldt*) Add tornado version to versions report | refs: #24733
  - f96b1d6 Merge pull request #24733 from msteed/issue-24439
  - 76cfef0 Include Tornado in versions report
- **PR** #24737: (*jacksontj*) Move AES command logging to trace @ *2015-06-17T01:48:11Z*
  - a861fe0 Merge pull request #24737 from jacksontj/2015.5
  - a4ed41a Move AES command logging to trace
- **PR** #24724: (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5 @ *2015-06-16T22:46:27Z*
  - **ISSUE** #24196: (*johnccfm*) Exception when using user.present with Windows | refs: #24646
  - **PR** #24646: (*twangboy*) Fixed user.present on existing user
  - 0d2dc46 Merge pull request #24724 from basepi/merge-forward-2015.5

  - 4641028 Merge remote-tracking branch `upstream/2014.7' into merge-forward-2015.5
  - a18dada Merge pull request #24646 from twangboy/fix_24196
    - a208e1d Fixed user.present on existing user
- **PR** #24701: (*jayeshka*) adding states/selinux unit test case. @ *2015-06-16T15:27:29Z*
  - 3d33fe7 Merge pull request #24701 from jayeshka/selinux-states-unit-test
  - 0c136fd adding states/selinux unit test case.
- **PR** #24687: (*cachedout*) Note about minimum worker_threads @ *2015-06-15T20:46:23Z*
  - 2e287a9 Merge pull request #24687 from cachedout/min_worker_threads
  - b7bb7ea Note about minimum worker_threads
- **PR** #24688: (*cachedout*) Update AUTHORS @ *2015-06-15T20:46:03Z*
  - 432478c Merge pull request #24688 from cachedout/update_authors
  - 3f6880e Better email
  - 6c7b773 Update AUTHORS
- **PR** #24649: (*cachedout*) Improved error reporting for failed states @ *2015-06-15T16:04:20Z*
  - **ISSUE** #22385: (*cachedout*) States which require unavailable modules should display the reason | refs: #24649
  - 9a2b50d Merge pull request #24649 from cachedout/issue_22385
  - b9fe792 States will now return the reason behind failure if a module could not be loaded
- **PR** #24673: (*jayeshka*) adding states/schedule unit test case. @ *2015-06-15T15:24:52Z*
  - 66e9e16 Merge pull request #24673 from jayeshka/schedule-states-unit-test
  - 54aaaa5 adding states/schedule unit test case.
- **PR** #24663: (*kartiksubbarao*) Update augeas_cfg.py @ *2015-06-15T15:18:48Z*
  - **ISSUE** #24661: (*kartiksubbarao*) augeas.change doesn't support setting empty values | refs: #24663
  - 5eb19c4 Merge pull request #24663 from kartiksubbarao/patch-2
  - e18db50 Update augeas_cfg.py
- **PR** #24667: (*dkiser*) fix for #24583 clouds/openstack.py kerying first time succeeds @ *2015-06-14T21:58:58Z*
  - **ISSUE** #24583: (*dkiser*) salt-cloud keyring password referenced before assignment | refs: #24667
  - 4450432 Merge pull request #24667 from dkiser/fix-cloud-keyring
  - c92c05f fix for #24583 clouds/openstack.py kerying first time succeeds
- **PR** #24659: (*kartiksubbarao*) Update aliases.py @ *2015-06-13T17:31:42Z*
  - **ISSUE** #24537: (*kartiksubbarao*) alias.present doesn't update alias values that are substrings of the existing value | refs: #24659
  - 4c64ee9 Merge pull request #24659 from kartiksubbarao/patch-1
  - d683474 Update aliases.py
- **PR** #24644: (*cro*) Merge forward 2014.7->2015.5 @ *2015-06-12T21:31:41Z*
  - **PR** #24643: (*cro*) Add reference to salt-announce mailing list
  - **PR** #24620: (*twangboy*) Fixed comment and uncomment functions in file.py

  - 89eb616 Merge pull request #24644 from cro/2014.7-2015.5-20150612
  - 4136dc3 Merge forward from 2014.7 to 2015.5
  - b99484f Merge pull request #24643 from cro/saltannounce
    - ecb0623 Add salt-announce mailing list.
  - 635121e Merge pull request #24620 from twangboy/fix_24215
    - d7a9999 Fixed comment and uncomment functions in file.py
- **PR** #24642: (*basepi*) Revert ``fix target rule, remove unneeded quotation mark'' @ *2015-06-12T20:14:26Z*
  - **PR** #24595: (*tankywoo*) fix target rule, remove unneeded quotation mark | refs: #24642
  - b896a0d Merge pull request #24642 from saltstack/revert-24595-fix-iptables-target
  - 5ff3224 Revert ``fix target rule, remove unneeded quotation mark''
- **PR** #24628: (*jayeshka*) adding states/reg unit test case. @ *2015-06-12T17:29:11Z*
  - 01092c2 Merge pull request #24628 from jayeshka/reg_states-unit-test
  - af1bd8f adding states/reg unit test case.
- **PR** #24631: (*rallytime*) Back-port #24591 to 2015.5 @ *2015-06-12T16:54:32Z*
  - **ISSUE** #24494: (*arnoutpierre*) Computed comments in jinja states | refs: #24591
  - **ISSUE** #24073: (*primechuck*) State.highstate uses stale grain data. | refs: #24492
  - **ISSUE** #23359: (*BalintSzigeti*) init.sls parsing issue | refs: #24591
  - **ISSUE** #21217: (*Colstuwjx*) Maybe a bug for jinja render? | refs: #24591
  - **PR** #24591: (*tbaker57*) Add some documentation surrounding Jinja vs yaml comments - | refs: #24631
  - **PR** #24492: (*DmitryKuzmenko*) Don't remove grains from opts
  - 5f491f9 Merge pull request #24631 from rallytime/bp-24591
  - f13cd41 Add extra clarification why jinja comments are needed.
  - 2374971 Fix typo
  - 6a91747 Add some documentation surrounding Jinja comments - refs #24492, #21217, #23359
- **PR** #24616: (*garethgreenaway*) additional logging in state.py module @ *2015-06-12T16:25:39Z*
  - f23f99e Merge pull request #24616 from garethgreenaway/2015_5_logging_disabled_states
  - 4dbf0ef Adding some logging statement to give feedback when states, including highstate, are disabled. Useful when running from scheduler.
- **PR** #24595: (*tankywoo*) fix target rule, remove unneeded quotation mark | refs: #24642 @ *2015-06-12T16:23:22Z*
  - 6dccbb0 Merge pull request #24595 from tankywoo/fix-iptables-target
  - 10a5160 fix target rule, remove unneeded quotation mark
- **PR** #24604: (*jfindlay*) fix pkg module integration tests @ *2015-06-12T16:04:26Z*
  - 8ac3d94 Merge pull request #24604 from jfindlay/pkg_tests
  - d88fb22 fix pkg module integration tests on CentOS 5
  - fb91b40 fix pkg module integration tests on ubuntu 12
- **PR** #24600: (*basepi*) [2015.5] Remove __kwarg__ from salt-ssh keyword args @ *2015-06-12T04:21:29Z*

  - 0ff545c Merge pull request #24600 from basepi/salt-ssh.orchestrate.20615
  - 9b55683 Remove __kwarg__ from salt-ssh keyword args
- **PR** #24608: (*basepi*) [2015.5] Normalize salt-ssh flat roster minion IDs to strings @ *2015-06-11T21:35:07Z*
  - **ISSUE** #22843: (*Xiol*) salt-ssh roster doesn't support integers as host keys | refs: #24608
  - 832916f Merge pull request #24608 from basepi/salt-ssh.flat.roster.integers.22843
  - 381820f Normalize salt-ssh flat roster minion IDs to strings
- **PR** #24605: (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5 @ *2015-06-11T19:15:21Z*
  - **PR** #24589: (*BretFisher*) Fixed Mine example for jinja code block
  - 4eb5bb2 Merge pull request #24605 from basepi/merge-forward-2015.5
  - f96c502 Merge remote-tracking branch `upstream/2014.7' into merge-forward-2015.5
  - d83928a Merge pull request #24589 from BretFisher/patch-1
    - 65a1133 Fixed Mine example for jinja code block
- **PR** #24598: (*jacobhammons*) 2015.5.2 release changes @ *2015-06-11T17:24:11Z*
  - **ISSUE** #24457: (*ryan-lane*) When selecting the version of docs on the docs site, it brings you to the homepage | refs: #24598
  - **ISSUE** #24250: (*jfindlay*) have version links on docs page link to that version of the current page | refs: #24598
  - e0bb177 Merge pull request #24598 from jacobhammons/doc-fixes
  - f3f34dd 2015.5.2 release changes Refs #24250 Refs #24457
- **PR** #24588: (*basepi*) Fixes for saltmod.function for salt-ssh @ *2015-06-11T16:15:21Z*
  - **ISSUE** #20615: (*aurynn*) 2014.7.1: salt/states/saltmod using incorrect return dict for orchestrate | refs: #24588
  - 26930b4 Merge pull request #24588 from basepi/salt-ssh.orchestrate.20615
  - 826936c Move documentation into docstring instead of comments
  - de052e7 Assign `return' to `ret' if necessary in saltmod.function
  - 34ff989 Convert keyword args to key=value strings in salt-ssh
- **PR** #24593: (*jayeshka*) adding states/redismod unit test case. @ *2015-06-11T15:55:27Z*
  - 5a21ad1 Merge pull request #24593 from jayeshka/redismod_states-unit-test
  - 3b95744 adding states/redismod unit test case.
- **PR** #24581: (*rallytime*) Disabled some flaky tests until we can figure out how to make them more reliable @ *2015-06-11T15:51:41Z*
  - **ISSUE** #40: (*thatch45*) Clean up timeouts | refs: #22857
  - **PR** #24217: (*jfindlay*) disable intermittently failing tests | refs: #24581
  - **PR** #23623: (*jfindlay*) Fix /jobs endpoint's return | refs: #24217
  - **PR** #22857: (*jacksontj*) Fix /jobs endpoint's return | refs: #23623
  - 8ffb86e Merge pull request #24581 from rallytime/disable_some_flaky_tests
  - c82f135 Disabled some flaky tests until we can figure out how to make them more reliable

- **PR** #24566: (*jayeshka*) adding states/rdp unit test case. @ *2015-06-11T02:14:39Z*
  - a570d7f Merge pull request #24566 from jayeshka/rdp_states-unit-test
  - 273b994 adding states/rdp unit test case.
- **PR** #24551: (*joejulian*) 2015.5 don't pollute environment @ *2015-06-11T02:13:06Z*
  - **ISSUE** #24480: (*kiorky*) [CRITICAL] [2015.5] tls breaks tzinfo | refs: #24551
  - 20ada1f Merge pull request #24551 from joejulian/2015.5_dont_pollute_environment
  - cfc3b43 Don't pollute the TZ environment variable
  - cba8d3f pep8
  - 9cb7015 Mark keyword version adds
  - 76e2583 Merge tls changes from develop
- **PR** #24574: (*jacobhammons*) Refs #19901 @ *2015-06-10T20:09:23Z*
  - **ISSUE** #19901: (*clinta*) State cache is not documented | refs: #24468
  - bb2fd6a Merge pull request #24574 from jacobhammons/19901
  - e2a2946 Refs #19901
- **PR** #24577: (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5 @ *2015-06-10T19:46:22Z*
  - **ISSUE** #24427: (*fayetted*) 2015.5.1-3 Windows 64Bit Minion fails to start after install | refs: #24530
  - **PR** #24530: (*twangboy*) Start Minion Service on Silent Install
  - b03166c Merge pull request #24577 from basepi/merge-forward-2015.5
  - e1d45cc Merge remote-tracking branch `upstream/2014.7' into merge-forward-2015.5
  - d376390 Merge pull request #24530 from twangboy/fix_24427
    - 673e1d8 Added missing panel.bmp for installer
    - cc50218 Start Minion Service on Silent Install
- **PR** #24571: (*jacobhammons*) Refs #24235 @ *2015-06-10T17:02:18Z*
  - **ISSUE** #24235: (*tomasfejfar*) Difference between running from minion and from master | refs: #24468
  - 3ec457b Merge pull request #24571 from jacobhammons/24235
  - 8df5d53 Refs #24235
- **PR** #24565: (*pille*) fix backtrace, when listing plugins @ *2015-06-10T16:33:11Z*
  - fe07eb5 Merge pull request #24565 from pille/munin-ignore-broken-symlinks
  - 8511a6c fix backtrace, when listing plugins
- **PR** #24554: (*ryan-lane*) Fix yes usage for pecl defaults @ *2015-06-09T23:59:49Z*
  - 251c8f9 Merge pull request #24554 from lyft/pecl-module-fix
  - 56a9cfc Fix yes usage for pecl defaults
- **PR** #24535: (*rallytime*) Back-port #24518 to 2015.5 @ *2015-06-09T20:06:18Z*
  - **PR** #24518: (*rallytime*) Merge #24448 with Pylint Fixes | refs: #24535
  - **PR** #24448: (*codertux*) Update modules path for operating systems using systemd | refs: #24518
  - dbd49b4 Merge pull request #24535 from rallytime/bp-24518

  - fc75197 Pylint fix
  - 3e08840 Update modules path for operating systems using systemd
- **PR** #24538: (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5 @ *2015-06-09T17:27:20Z*
  - **PR** #24513: (*jquast*) bugfix use of `iteritem' in 2014.7 branch
  - **PR** #24511: (*jquast*) bugfix: trailing "...done" in rabbitmq output | refs: #24513
  - 485ed3c Merge pull request #24538 from basepi/merge-forward-2015.5
  - 6a8039d Merge remote-tracking branch `upstream/2014.7' into merge-forward-2015.5
  - 6ebc476 Merge pull request #24513 from jquast/2014.7-bugfix-iteritem
    * 2be0180 bugfix use of `iteritem' in 2014.7 branch
- **PR** #24495: (*jayeshka*) adding states/rabbitmq_vhost unit test case. @ *2015-06-09T15:33:23Z*
  - 73e6388 Merge pull request #24495 from jayeshka/rabbitmq_vhost_states-unit-test
  - 31889e3 cosmetic change.
  - cf501cf resolved error.
  - 4bb6087 Merge branch `2015.5' of https://github.com/saltstack/salt into rabbitmq_vhost_states-unit-test
  - 3ad7714 adding states/rabbitmq_vhost unit test case.
- **PR** #24445: (*jayeshka*) adding states/pyrax_queues unit test case. @ *2015-06-09T15:28:45Z*
  - bf1abcc Merge pull request #24445 from jayeshka/pyrax_queues_states-unit-test
  - ea27cef adding states/pyrax_queues unit test case.
- **PR** #24490: (*aneeshusa*) Fix pacman.list_upgrades for new python_shell default. @ *2015-06-09T15:13:16Z*
  - 0247e8d Merge pull request #24490 from aneeshusa/fix-pacman-list-upgrades
  - 980e1cb Lint fix.
  - dca33f1 Fix pacman.list_upgrades for new python_shell default.
- **PR** #24517: (*steverweber*) small fixes to the ipmi docs @ *2015-06-09T15:10:14Z*
  - 6268ddb Merge pull request #24517 from steverweber/ipmi_doc
  - 6413712 lint
  - e78aea9 more small fixes to the ipmi docs
- **PR** #24524: (*jayeshka*) any() takes list oy tuple. @ *2015-06-09T13:49:42Z*
  - 3728b3f Merge pull request #24524 from jayeshka/rabbitmq_vhost_states-module
  - 01c99ad any() takes list oy tuple.
- **PR** #24482: (*eliasp*) `docker.running' needs now the `image' param. @ *2015-06-09T04:43:04Z*
  - dd23de8 Merge pull request #24482 from eliasp/2015.5-states.dockerio-docker.running-doc
  - 5de741d `docker.running' needs now the `image' param.
- **PR** #24515: (*basepi*) [2015.5] Add xml library to the salt-thin @ *2015-06-09T04:10:06Z*
  - **ISSUE** #23503: (*jfindlay*) salt-ssh fails on CentOS 7 when python-zmq is not installed | refs: #24515

  - 0cb11a2 lxc: typo
  - d71efa6 Try to close input pipes before calling lxc-start

20.2.41 Salt 2015.5.4 Release Notes

Version 2015.5.4 is a bugfix release for *2015.5.0*.

Changes:

- The `cron.present` state now correctly defaults to state ID as identifier.
- When querying for VMs in `digital_ocean_v2.py`, the number of VMs to include in a page was changed from 20 (default) to 200 to reduce the number of API calls to Digital Ocean.
- The `vmware` Salt-Cloud driver was back-ported from the develop branch in order for installations of Salt that are older than 2015.8.0 to be able to use the `vmware` driver without stack-tracing on various deprecation paths that were implemented in the 2015.8.0 release.

Changes for v2015.5.3..v2015.5.4

Extended changelog courtesy of Todd Stansell (https://github.com/tjstansell/salt-changelogs):

  - **ISSUE** #24882: (*nmadhok*) salt.states.openstack_config.present and salt.states.openstack_config.absent make changes when test=True | refs: #26263
- **PR** #26265: (*rallytime*) Don't stacktrace on query return in ec2.create_snapshot @ *2015-08-13T16:28:48Z*
  - **ISSUE** #24484: (*codehotter*) clouds/ec2.py: create_snapshot throws exception | refs: #26265
- **PR** #26285: (*stanislavb*) Remove explicit version from instance identity URL @ *2015-08-13T16:25:32Z*
- **PR** #26275: (*cachedout*) Re-init modules on multi-master reconnect @ *2015-08-13T15:52:50Z*
- **PR** #26273: (*garethgreenaway*) Fixes to schedule module in 2015.5 @ *2015-08-13T15:34:43Z*
- **PR** #26271: (*rallytime*) Fix del_root_vol_on_destroy and del_all_vols_on_destroy functionality on ec2 @ *2015-08-12T23:22:47Z*

  - **ISSUE** #24483: (*codehotter*) clouds/ec2.py: del_root_vol_on_destroy and del_all_vols_on_destroy not working | refs: #26271

- **PR** #26219: (*anlutro*) cron: make identifier default to state ID @ *2015-08-12T18:42:33Z*
  - **ISSUE** #25958: (*anlutro*) Cron identifier does not default to state ID as documented | refs: #26219
- **PR** #26257: (*rallytime*) Back-port #26237 to 2015.5 @ *2015-08-12T18:40:35Z*
  - **ISSUE** #26207: (*fullermd*) group members setting fails with obscure error message on FreeBSD | refs: #26237
  - **PR** #26237: (*silenius*) fix issue #26207 | refs: #26257
- **PR** #26258: (*nmadhok*) Fix permission on tests/runtests.py on 2015.5 branch @ *2015-08-12T18:40:04Z*
- **PR** #26261: (*nmadhok*) Correct spelling of integration in docs @ *2015-08-12T18:14:48Z*
  - **PR** #2015: (*thekuffs*) Esky / bbfreeze support
- **PR** #26247: (*nmadhok*) Initial commit of unit tests for vmware cloud driver @ *2015-08-12T16:58:24Z*
- **PR** #26246: (*nmadhok*) Backport additions to VMware cloud driver from develop to 2015.5 branch @ *2015-08-12T15:11:26Z*
- **PR** #26239: (*opdude*) Fixed documentation to match function name @ *2015-08-12T14:48:52Z*
- **PR** #26232: (*garethgreenaway*) Fix to trust_key in gpg module for 2015.5. @ *2015-08-12T04:48:27Z*
- **PR** #26084: (*twangboy*) Added python_shell=True, quoted user input @ *2015-08-10T21:29:35Z*
  - **ISSUE** #25802: (*jefftucker*) Running module ``npm.list'' fails on Windows for masterless minion | refs: #26084
- **PR** #26183: (*cro*) Fix LDAP configuration issue. @ *2015-08-10T19:09:41Z*
- **PR** #26186: (*jacobhammons*) regenerated man pages @ *2015-08-10T19:07:44Z*
- **PR** #26182: (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5 @ *2015-08-10T19:00:10Z*
  - **ISSUE** #25961: (*getabc*) [2015.5.3-2] salt-winrepo.git/salt-minion.sls fails certificate `*.wpengine.com' or `wpengine.com' | refs: #26047
  - **ISSUE** #25751: (*basepi*) Document *master_finger* more prominently | refs: #26088
  - **PR** #26116: (*corux*) file.replace fails if repl string is an invalid regex and append/prepend is used
  - **PR** #26088: (*jacobhammons*) Master finger
  - **PR** #26047: (*jacobhammons*) Updated windows download links in the docs to https://repo.saltstack.com
- **PR** #26000: (*driskell*) Implement full event caching for subscribed tags @ *2015-08-10T18:57:17Z*
  - **ISSUE** #25998: (*driskell*) Event subsystem discarding required events during --batch breaking it for slow running commands | refs: #26000
- **PR** #26175: (*rallytime*) Back-port #26153 to 2015.5 @ *2015-08-10T18:22:32Z*
  - **PR** #26153: (*loa*) Fix dockerio state documentation typo | refs: #26175
- **PR** #26177: (*rallytime*) Back-port #26147 to 2015.5 @ *2015-08-10T18:22:01Z*
  - **ISSUE** #26024: (*jpic*) lxc_conf_unset in cloud.profile is ignored
  - **PR** #26147: (*martinhoefling*) Fixes #26024 | refs: #26177
- **PR** #26179: (*rallytime*) Back-port #25404 to 2015.5 @ *2015-08-10T18:21:50Z*
  - **ISSUE** #21082: (*clinta*) master_type failover does not failover on DNS errors | refs: #25404

  - **PR** #25404: (*DmitryKuzmenko*) Fixed minion failover to next master on DNS errors. | refs: #26179
- **PR** #26180: (*jfindlay*) fix processing of state.template @ *2015-08-10T18:21:38Z*
  - **ISSUE** #26112: (*wt*) state.template fails with unclear error with template with only an include | refs: #26180
- **PR** #26172: (*nmadhok*) [Backport] Make sure variable is a dictionary before popping something from it. @ *2015-08-10T16:42:50Z*
  - **ISSUE** #26162: (*nmadhok*) VMware cloud driver create function failing with traceback on latest develop | refs: #26163 #26172
  - **PR** #26163: (*nmadhok*) Make sure variable is a dictionary before popping something from it.
- **PR** #26168: (*cachedout*) Fix slack docs @ *2015-08-10T14:57:18Z*
  - **ISSUE** #26098: (*rdinoff*) SALT.STATES.SLACK Doc update | refs: #26168
- **PR** #26127: (*garethgreenaway*) Fixes to salt.utils.http related to cp.get_file_str bug. @ *2015-08-10T14:38:25Z*
  - **ISSUE** #24106: (*nvx*) fileclient.py#get_url ignores HTTP Auth again (2015.5 regression) | refs: #26127
- **PR** #26140: (*nmadhok*) VMware cloud driver fixes @ *2015-08-10T13:15:58Z*
  - **ISSUE** #26141: (*nmadhok*) salt-cloud VMware driver fails with error in parsing configuration file | refs: #26140
  - **ISSUE** #25809: (*o-sleep*) vmware cloud module error message | refs: #26140
  - **ISSUE** #25625: (*steverweber*) cloud vmware driver does not provide mac_address unless vmware tools is running | refs: #26137 #26140
- **PR** #26137: (*steverweber*) use device mac address if vmtools not active @ *2015-08-09T03:05:36Z*
  - **ISSUE** #25625: (*steverweber*) cloud vmware driver does not provide mac_address unless vmware tools is running | refs: #26137 #26140
- **PR** #26119: (*jodv*) Backport eauth bugfix to 2015.5 @ *2015-08-09T02:19:52Z*
- **PR** #26135: (*cro*) Fix proxy minions in 2015.5 and significantly update documentation. @ *2015-08-09T02:19:21Z*
- **PR** #26132: (*TheBigBear*) minor edit @ *2015-08-08T21:05:34Z*
- **PR** #26133: (*amontalban*) Fixed #25915 in salt/modules/pkgng.py and salt/states/pkg.py @ *2015-08-08T21:05:05Z*
  - **ISSUE** #25915: (*ari*) FreeBSD pkg install fails
- **PR** #26111: (*anlutro*) Better error messages when virtualenv creation fails @ *2015-08-07T21:42:09Z*
- **PR** #26110: (*jfindlay*) check for sources before adding them to cmd str @ *2015-08-07T21:33:23Z*
  - **ISSUE** #26093: (*freedba*) archive.tar bug | refs: #26110
- **PR** #26106: (*vr-jack*) Update __init__.py @ *2015-08-07T21:15:55Z*
- **PR** #26101: (*rallytime*) Back-port #25984 to 2015.5 @ *2015-08-07T18:56:26Z*
  - **ISSUE** #25983: (*jmdcal*) Trying to get md5 of local zip | refs: #25984
  - **PR** #25984: (*jmdcal*) Support local files without md5sum | refs: #26101
- **PR** #26080: (*techhat*) Fix string checking in s3fs @ *2015-08-06T23:36:09Z*
- **PR** #26079: (*cachedout*) Update docs to remove state.over @ *2015-08-06T23:35:26Z*
  - **ISSUE** #26039: (*basepi*) Update scheduler docs to use orchestrate instead of overstate | refs: #26079

- **PR** #26058: (*opdude*) Fix choco version on chocolatey versions below 0.9.9 @ *2015-08-06T18:50:10Z*
- **PR** #26068: (*jfindlay*) fix autoruns.list looking in wrong directory @ *2015-08-06T18:49:48Z*
- **PR** #26065: (*s0undt3ch*) [2015.5] Update to latest bootstrap stable release v2015.06.08 @ *2015-08-06T17:09:35Z*
  - **ISSUE** #634: (*loupgaroublond*) /srv/salt/_grains/ not documented | refs: #26065

  - **PR** #25671: (*niq000*) added a parameter so verifying SSL is now optional instead of hard-coded | refs: #25738
- **PR** #25737: (*rallytime*) Back-port #25608 to 2015.5 @ *2015-07-27T16:08:18Z*
  - **ISSUE** #25229: (*rall0r*) Module git.latest kills target directory when test=True | refs: #25608
  - **PR** #25608: (*rall0r*) Fix: prevent git.latest from removing target | refs: #25737
- **PR** #25733: (*davidjb*) Avoid IndexError when listing mounts if mount output ends in newline @ *2015-07-27T16:08:05Z*
- **PR** #25705: (*blackduckx*) Support for setm augeas command. @ *2015-07-27T16:07:10Z*
  - **ISSUE** #22460: (*onmeac*) Command setm is not supported (yet) | refs: #25705
- **PR** #25703: (*cachedout*) Return to *str* for master_type for 2015.5 @ *2015-07-27T16:06:22Z*
- **PR** #25702: (*twangboy*) Fixed win_user module for groups with spaces in the name @ *2015-07-27T15:06:33Z*
  - **ISSUE** #25144: (*johnccfm*) user.present on Windows fails to add user to groups if group name contains a space | refs: #25702
- **PR** #25711: (*twangboy*) Fixed problem with win_servermanager.list_installed @ *2015-07-27T15:05:48Z*
  - **ISSUE** #25351: (*m03*) win_servermanager.list_installed failing with ``IndexError: list index out of range'' | refs: #25711
- **PR** #25714: (*cachedout*) Display warning when progressbar can't be loaded @ *2015-07-25T00:10:13Z*
  - **ISSUE** #25435: (*yee379*) progressbar dependency missing | refs: #25714
- **PR** #25699: (*rallytime*) Back-port #25660 to 2015.5 | refs: #25709 @ *2015-07-24T22:11:40Z*
  - **PR** #25660: (*colekowalski*) add glusterfs' direct-io-mode to mount_invisible_keys | refs: #25699 #25709
- **PR** #25694: (*s0undt3ch*) Salt-SSH fix for #25689 @ *2015-07-24T21:41:57Z*
  - **ISSUE** #25689: (*anlutro*) Minion log in salt-ssh | refs: #25694
- **PR** #25710: (*jahamn*) Integration Testcase for Issue 25250 @ *2015-07-24T20:57:33Z*
  - **ISSUE** #25250: (*wipfs*) `force' option in copy state deletes target file | refs: #25461 #25710
- **PR** #25680: (*basepi*) [2015.5] Move cmd.run jinja aliasing to a wrapper class to prevent side effects @ *2015-07-24T19:52:10Z*
  - **PR** #25049: (*terminalmage*) Fix cmd.run when cross-called in a state/execution module | refs: #25680

- **PR** #25682: (*basepi*) [2015.5] Fix parsing args with just a hash (#) @ *2015-07-24T19:52:01Z*
- **PR** #25695: (*stanislavb*) Configurable AWS region & region from IAM metadata @ *2015-07-24T19:36:40Z*
- **PR** #25645: (*kev009*) Fix pkgng provider to work with a sources list and the underlying pkg... @ *2015-07-24T16:33:18Z*
- **PR** #25677: (*aneeshusa*) Fix pacman.list_upgrades when refresh=True. @ *2015-07-24T16:30:06Z*
- **PR** #25675: (*UtahDave*) Use OS line endings with contents on file.managed @ *2015-07-24T16:29:50Z*
  - **ISSUE** #25674: (*UtahDave*) file.managed with contents parameter uses wrong line endings on Windows | refs: #25675
- **PR** #25676: (*basepi*) Update release candidate docs to 2015.8.0rc2 @ *2015-07-23T20:29:37Z*
- **PR** #25666: (*nmadhok*) Check if the properties exist before looping over them causing KeyError @ *2015-07-23T17:55:40Z*
  - **ISSUE** #25665: (*nmadhok*) salt-cloud VMware driver fails with KeyErrors if there's any existing machine in the VMware infrastructure in (invalid state) | refs: #25666
- **PR** #25656: (*anlutro*) Fix locale detection in debian/gentoo @ *2015-07-23T16:46:40Z*
- **PR** #25661: (*rallytime*) Back-port #25624 to 2015.5 @ *2015-07-23T16:26:48Z*
  - **PR** #25624: (*bobrik*) Fix typo in get_routes example for debian_ip | refs: #25661
- **PR** #25662: (*rallytime*) Back-port #25638 to 2015.5 @ *2015-07-23T16:26:40Z*
  - **ISSUE** #15209: (*hubez*) file.manage: source_hash not working with s3:// (2014.7.0rc1) | refs: #25638
  - **PR** #25638: (*TronPaul*) fix bad merge in 99fc7ec | refs: #25662
- **PR** #25644: (*cachedout*) pillar doc fix @ *2015-07-22T22:57:23Z*
  - **ISSUE** #25413: (*zizkebab*) pillar_opts default behavior is not reflected in the docs | refs: #25644
- **PR** #25642: (*cachedout*) Warn on pillar schedule delete @ *2015-07-22T22:04:12Z*
  - **ISSUE** #25540: (*dennisjac*) salt highstate schedule cannot be removed | refs: #25642
- **PR** #25598: (*twangboy*) Fixed problem trying to load file with name of boolean type @ *2015-07-22T17:07:49Z*
  - **ISSUE** #25437: (*lorengordon*) Stacktrace on Windows when running pkg.list_pkgs | refs: #25598 #25763
  - 7b79e433 Merge pull request #25598 from twangboy/fix_25437
- **PR** #25604: (*terminalmage*) Move patching of mock_open to within test @ *2015-07-22T16:53:55Z*
  - **ISSUE** #25323: (*terminalmage*) unit.modules.tls_test fails with older mock | refs: #25604
- **PR** #25609: (*s0undt3ch*) [2015.5] Update the bootstrap script to latest release v2015.07.22 @ *2015-07-22T16:28:52Z*
  - **ISSUE** #630: (*syphernl*) Allow for an include statement in config files | refs: #25609
  - **PR** #627: (*chjohnst*) add saltversion grain | refs: #25609
- **PR** #25603: (*terminalmage*) Add version_cmp function to yumpkg.py @ *2015-07-22T15:42:29Z*
  - **ISSUE** #21912: (*rvora*) pkg.latest not updating the package on CentOS though yum reports an update available | refs: #25603
- **PR** #25590: (*garethgreenaway*) 2015.5 scheduled jobs return data @ *2015-07-21T21:57:42Z*
  - **ISSUE** #25560: (*dennisjac*) scheduled highstate runs don't return results to the job cache | refs: #25590
- **PR** #25584: (*rallytime*) Back-port #24054 and #25576 to 2015.5 @ *2015-07-21T21:16:38Z*

  - **PR** #25576: (*pcn*) s3fs breaks when fetching files from s3 | refs: #25584
  - **PR** #24054: (*mgwilliams*) s3.head: return useful data | refs: #25584
- **PR** #25589: (*jahamn*) Fixes ssh_known_host not taking port into account @ *2015-07-21T21:15:06Z*
  - **ISSUE** #23626: (*mirko*) salt state `ssh_known_hosts' doesn't take `port' into account | refs: #25589
- **PR** #25573: (*EvaSDK*) Do not execute bootstrap script twice @ *2015-07-21T18:20:04Z*
  - **PR** #25465: (*EvaSDK*) 2015.5.3 LXC module fixes | refs: #25573
- **PR** #25580: (*attiasr*) use explicit utf-8 decoding (#25532) @ *2015-07-21T15:40:49Z*
  - **ISSUE** #25532: (*attiasr*) salt/modules/win_pkg.py list_pkgs is broken (encoding issues) | refs: #25556 #25580
- **PR** #25568: (*twangboy*) Fixed win_useradd module to add fullname @ *2015-07-21T14:30:25Z*
  - **ISSUE** #25206: (*jfindlay*) fullname issues with user.add state on windows | refs: #25568
- **PR** #25561: (*twangboy*) Fixed the gem module to work on windows… without injection @ *2015-07-20T21:12:15Z*
  - **ISSUE** #21041: (*deuscapturus*) state module gem.installed not working on Windows. | refs: #25430 #25561 #25428
  - **PR** #25428: (*twangboy*) Fixed the gem module to work on windows | refs: #25561
- **PR** #25521: (*cachedout*) Fix outputter for state.orch @ *2015-07-20T19:30:14Z*
- **PR** #25563: (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5 @ *2015-07-20T19:27:36Z*
  - **PR** #25416: (*cachedout*) Fix broken keyword
- **PR** #25559: (*cachedout*) Lint win_pkg @ *2015-07-20T17:46:29Z*
- **PR** #25556: (*attiasr*) fix for #25532 @ *2015-07-20T17:45:11Z*
  - **ISSUE** #25532: (*attiasr*) salt/modules/win_pkg.py list_pkgs is broken (encoding issues) | refs: #25556 #25580
- **PR** #25554: (*jfindlay*) verify_ssl=True for s3 ext pillar @ *2015-07-20T17:43:38Z*
  - **ISSUE** #25538: (*stanislavb*) S3 ext_pillar configuration requires verify_ssl | refs: #25554
- **PR** #25551: (*rallytime*) Backport #25530 to 2015.5 @ *2015-07-20T17:43:00Z*
  - **PR** #25530: (*andre-luiz-dos-santos*) The variable name must be last | refs: #25551

20.2.42 Salt 2015.5.5 Release Notes

Version 2015.5.5 is a bugfix release for *2015.5.0*.

Changes:

- The `cron.present` state now correctly defaults to state ID as identifier.
- When querying for VMs in `ditigal_ocean_v2.py`, the number of VMs to include in a page was changed from 20 (default) to 200 to reduce the number of API calls to Digital Ocean.
- The `vmware` Salt-Cloud driver was back-ported from the develop branch in order for installations of Salt that are older than 2015.8.0 to be able to use the `vmware` driver without stack-tracing on various deprecation paths that were implemented in the 2015.8.0 release.

Changes for v2015.5.3..v2015.5.5

Changes:

- **PR** #26292: (*jquast*) Rabbitmq 3.2.4 on Ubuntu has "...done.", not "...done" @ *2015-08-13T19:53:29Z*
- **PR** #26296: (*jquast*) bugfix missing `runas=None' for rabbitmqctl cmds (backport to 2015.5) @ *2015-08-13T19:52:40Z*
- **PR** #26293: (*jfindlay*) Fix #26268 @ *2015-08-13T19:48:06Z*
  - **ISSUE** #25618: (*twangboy*) Fix reg.py to work with the registry properly | refs: #26268
  - **PR** #26268: (*twangboy*) Multiple improvements to reg executionmod and state mod | refs: #26293
- **PR** #26290: (*rallytime*) Only call convert_to_arn when action name is provided @ *2015-08-13T18:48:58Z*
  - **ISSUE** #25192: (*deuscapturus*) 2015.5.2 boto_cloudwatch_alarm.present not working. | refs: #26290
- **PR** #26288: (*bbinet*) allow deleting grains which value is False @ *2015-08-13T18:24:36Z*
- **PR** #26263: (*rallytime*) Don't make changes when test=True for openstack present/absent funcs @ *2015-08-13T16:30:31Z*
  - **ISSUE** #24882: (*nmadhok*) salt.states.openstack_config.present and salt.states.openstack_config.absent make changes when test=True | refs: #26263
- **PR** #26265: (*rallytime*) Don't stacktrace on query return in ec2.create_snapshot @ *2015-08-13T16:28:48Z*
  - **ISSUE** #24484: (*codehotter*) clouds/ec2.py: create_snapshot throws exception | refs: #26265
- **PR** #26285: (*stanislavb*) Remove explicit version from instance identity URL @ *2015-08-13T16:25:32Z*
- **PR** #26275: (*cachedout*) Re-init modules on multi-master reconnect @ *2015-08-13T15:52:50Z*
- **PR** #26273: (*garethgreenaway*) Fixes to schedule module in 2015.5 @ *2015-08-13T15:34:43Z*
- **PR** #26271: (*rallytime*) Fix del_root_vol_on_destroy and del_all_vols_on_destroy functionality on ec2 @ *2015-08-12T23:22:47Z*

  - **ISSUE** #24483: (*codehotter*) clouds/ec2.py: del_root_vol_on_destroy and del_all_vols_on_destroy not working | refs: #26271
- **PR** #26219: (*anlutro*) cron: make identifier default to state ID @ *2015-08-12T18:42:33Z*
  - **ISSUE** #25958: (*anlutro*) Cron identifier does not default to state ID as documented | refs: #26219
- **PR** #26257: (*rallytime*) Back-port #26237 to 2015.5 @ *2015-08-12T18:40:35Z*
  - **ISSUE** #26207: (*fullermd*) group members setting fails with obscure error message on FreeBSD | refs: #26237
  - **PR** #26237: (*silenius*) fix issue #26207 | refs: #26257
- **PR** #26258: (*nmadhok*) Fix permission on tests/runtests.py on 2015.5 branch @ *2015-08-12T18:40:04Z*
- **PR** #26261: (*nmadhok*) Correct spelling of integration in docs @ *2015-08-12T18:14:48Z*
  - **PR** #2015: (*thekuffs*) Esky / bbfreeze support
- **PR** #26247: (*nmadhok*) Initial commit of unit tests for vmware cloud driver @ *2015-08-12T16:58:24Z*
- **PR** #26246: (*nmadhok*) Backport additions to VMware cloud driver from develop to 2015.5 branch @ *2015-08-12T15:11:26Z*
- **PR** #26239: (*opdude*) Fixed documentation to match function name @ *2015-08-12T14:48:52Z*
- **PR** #26232: (*garethgreenaway*) Fix to trust_key in gpg module for 2015.5. @ *2015-08-12T04:48:27Z*
- **PR** #26084: (*twangboy*) Added python_shell=True, quoted user input @ *2015-08-10T21:29:35Z*
  - **ISSUE** #25802: (*jefftucker*) Running module ``npm.list'' fails on Windows for masterless minion | refs: #26084
- **PR** #26183: (*cro*) Fix LDAP configuration issue. @ *2015-08-10T19:09:41Z*
- **PR** #26186: (*jacobhammons*) regenerated man pages @ *2015-08-10T19:07:44Z*
- **PR** #26182: (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5 @ *2015-08-10T19:00:10Z*
  - **ISSUE** #25961: (*getabc*) [2015.5.3-2] salt-winrepo.git/salt-minion.sls fails certificate `*.wpengine.com' or `wpengine.com' | refs: #26047
  - **ISSUE** #25751: (*basepi*) Document *master_finger* more prominently | refs: #26088
  - **PR** #26116: (*corux*) file.replace fails if repl string is an invalid regex and append/prepend is used
  - **PR** #26088: (*jacobhammons*) Master finger
  - **PR** #26047: (*jacobhammons*) Updated windows download links in the docs to https://repo.saltstack.com
- **PR** #26000: (*driskell*) Implement full event caching for subscribed tags @ *2015-08-10T18:57:17Z*
  - **ISSUE** #25998: (*driskell*) Event subsystem discarding required events during --batch breaking it for slow running commands | refs: #26000
- **PR** #26175: (*rallytime*) Back-port #26153 to 2015.5 @ *2015-08-10T18:22:32Z*
  - **PR** #26153: (*loa*) Fix dockerio state documentation typo | refs: #26175
- **PR** #26177: (*rallytime*) Back-port #26147 to 2015.5 @ *2015-08-10T18:22:01Z*
  - **ISSUE** #26024: (*jpic*) lxc_conf_unset in cloud.profile is ignored
  - **PR** #26147: (*martinhoefling*) Fixes #26024 | refs: #26177
- **PR** #26179: (*rallytime*) Back-port #25404 to 2015.5 @ *2015-08-10T18:21:50Z*
  - **ISSUE** #21082: (*clinta*) master_type failover does not failover on DNS errors | refs: #25404

  - **PR** #25404: (*DmitryKuzmenko*) Fixed minion failover to next master on DNS errors. | refs: #26179
- **PR** #26180: (*jfindlay*) fix processing of state.template @ *2015-08-10T18:21:38Z*
  - **ISSUE** #26112: (*wt*) state.template fails with unclear error with template with only an include | refs: #26180
- **PR** #26172: (*nmadhok*) [Backport] Make sure variable is a dictionary before popping something from it. @ *2015-08-10T16:42:50Z*
  - **ISSUE** #26162: (*nmadhok*) VMware cloud driver create function failing with traceback on latest develop | refs: #26163 #26172
  - **PR** #26163: (*nmadhok*) Make sure variable is a dictionary before popping something from it.
- **PR** #26168: (*cachedout*) Fix slack docs @ *2015-08-10T14:57:18Z*
  - **ISSUE** #26098: (*rdinoff*) SALT.STATES.SLACK Doc update | refs: #26168
- **PR** #26127: (*garethgreenaway*) Fixes to salt.utils.http related to cp.get_file_str bug. @ *2015-08-10T14:38:25Z*
  - **ISSUE** #24106: (*nvx*) fileclient.py#get_url ignores HTTP Auth again (2015.5 regression) | refs: #26127
- **PR** #26140: (*nmadhok*) VMware cloud driver fixes @ *2015-08-10T13:15:58Z*
  - **ISSUE** #26141: (*nmadhok*) salt-cloud VMware driver fails with error in parsing configuration file | refs: #26140
  - **ISSUE** #25809: (*o-sleep*) vmware cloud module error message | refs: #26140
  - **ISSUE** #25625: (*steverweber*) cloud vmware driver does not provide mac_address unless vmware tools is running | refs: #26137 #26140
- **PR** #26137: (*steverweber*) use device mac address if vmtools not active @ *2015-08-09T03:05:36Z*
  - **ISSUE** #25625: (*steverweber*) cloud vmware driver does not provide mac_address unless vmware tools is running | refs: #26137 #26140
- **PR** #26119: (*jodv*) Backport eauth bugfix to 2015.5 @ *2015-08-09T02:19:52Z*
- **PR** #26135: (*cro*) Fix proxy minions in 2015.5 and significantly update documentation. @ *2015-08-09T02:19:21Z*
- **PR** #26132: (*TheBigBear*) minor edit @ *2015-08-08T21:05:34Z*
- **PR** #26133: (*amontalban*) Fixed #25915 in salt/modules/pkgng.py and salt/states/pkg.py @ *2015-08-08T21:05:05Z*
  - **ISSUE** #25915: (*ari*) FreeBSD pkg install fails
- **PR** #26111: (*anlutro*) Better error messages when virtualenv creation fails @ *2015-08-07T21:42:09Z*
- **PR** #26110: (*jfindlay*) check for sources before adding them to cmd str @ *2015-08-07T21:33:23Z*
  - **ISSUE** #26093: (*freedba*) archive.tar bug | refs: #26110
- **PR** #26106: (*vr-jack*) Update __init__.py @ *2015-08-07T21:15:55Z*
- **PR** #26101: (*rallytime*) Back-port #25984 to 2015.5 @ *2015-08-07T18:56:26Z*
  - **ISSUE** #25983: (*jmdcal*) Trying to get md5 of local zip | refs: #25984
  - **PR** #25984: (*jmdcal*) Support local files without md5sum | refs: #26101
- **PR** #26080: (*techhat*) Fix string checking in s3fs @ *2015-08-06T23:36:09Z*
- **PR** #26079: (*cachedout*) Update docs to remove state.over @ *2015-08-06T23:35:26Z*
  - **ISSUE** #26039: (*basepi*) Update scheduler docs to use orchestrate instead of overstate | refs: #26079

- **PR** #26058: (*opdude*) Fix choco version on chocolatey versions below 0.9.9 @ *2015-08-06T18:50:10Z*
- **PR** #26068: (*jfindlay*) fix autoruns.list looking in wrong directory @ *2015-08-06T18:49:48Z*
- **PR** #26065: (*s0undt3ch*) [2015.5] Update to latest bootstrap stable release v2015.06.08 @ *2015-08-06T17:09:35Z*
  - **ISSUE** #634: (*loupgaroublond*) /srv/salt/_grains/ not documented | refs: #26065
  - **ISSUE** #631: (*fatbox*) Can't extend the same item multiple times | refs: #26065
  - **ISSUE** #625: (*whiteinge*) *cmd.run* state *user* flag is not working | refs: #25506 #632
  - **PR** #640: (*terminalmage*) fix syntax errors introduced in 0f776c13 | refs: #26065
  - **PR** #638: (*blast-hardcheese*) Tightened up configuration documentation | refs: #26065
  - **PR** #633: (*epoelke*) Bug fix to salt-key | refs: #26065
  - **PR** #632: (*whiteinge*) Change the `cmd.run` state to use the new `runas` arg | refs: #26065
- **PR** #26061: (*gmcwhistler*) Patch for issue #25994 @ *2015-08-06T17:07:34Z*
  - **ISSUE** #25994: (*gmcwhistler*) module.ilo tempfile creation in __execute_cmd results in TypeError: cannot concatenate `str' and `int' objects
- **PR** #26064: (*s0undt3ch*) Don't stacktrace when trying to get the default locale. @ *2015-08-06T16:11:05Z*
  - **ISSUE** #26063: (*saltstack-bot*) not working with salt-cloud shows unknown locale error | refs: #26064
- **PR** #26048: (*jacobhammons*) Updated windows download links in the docs to https://repo.saltstack.com @ *2015-08-05T22:59:50Z*
- **PR** #26044: (*rallytime*) Make sure the key we're comparing is also lowercase @ *2015-08-05T19:23:54Z*
  - **ISSUE** #25616: (*rallytime*) [2015.5] Provisioning Linodes Stacktraces | refs: #26044
- **PR** #26042: (*jfindlay*) fix test mode logic in state docs @ *2015-08-05T19:23:07Z*
- **PR** #26036: (*nicholascapo*) survey.hash: Remove manually printed text @ *2015-08-05T19:21:59Z*
  - **ISSUE** #24460: (*nicholascapo*) Survey runner does not follow *--out* flag | refs: #26036
- **PR** #26030: (*opdude*) Fix a bug in choco version that returned odd data @ *2015-08-05T16:30:25Z*
- **PR** #26032: (*jfindlay*) add test logic to state reult doc @ *2015-08-05T16:28:32Z*
- **PR** #26031: (*alekti*) Revert ``Add file as supported protocol for file source_hash. Fixes #23764'' @ *2015-08-05T15:32:01Z*
  - **ISSUE** #23764: (*es1o*) source_hash from local file is not supported. | refs: #25750
- **PR** #26021: (*anlutro*) Documentation: Specify versionadded for git.present shared argument @ *2015-08-05T14:17:38Z*
- **PR** #26020: (*alekti*) Correctly resolve conflict merging pull 25750 to 2015.5 @ *2015-08-05T14:16:58Z*
  - **ISSUE** #23764: (*es1o*) source_hash from local file is not supported. | refs: #25750
  - **PR** #25750: (*alekti*) Add file as supported protocol for file source_hash. Fixes #25701. | refs: #26020
- **PR** #26016: (*basepi*) Revert ``Deep merge of pillar lists'' @ *2015-08-05T04:59:52Z*
  - **ISSUE** #22241: (*masterkorp*) Salt master not properly generating the map | refs: #25358
  - **PR** #25358: (*dkiser*) Deep merge of pillar lists | refs: #26016
- **PR** #25992: (*twangboy*) Refactor win_system.py @ *2015-08-05T04:54:18Z*
  - **ISSUE** #12255: (*eliasp*) `system.set_computer_desc' fails with non-ASCII chars | refs: #25992

  - **ISSUE** #3: (*thatch45*) libvirt module
- **PR** #26002: (*twangboy*) Fixed regex to account for comment character followed by whitespace @ *2015-08-04T22:28:11Z*
  - **ISSUE** #25948: (*twangboy*) Fix uncomment function to handle spaces | refs: #26002
- **PR** #25970: (*jfindlay*) accept addition of layman overlay @ *2015-08-04T15:42:28Z*
  - **ISSUE** #25949: (*godlike64*) layman.add does not work with unofficial overlays | refs: #25970
- **PR** #25971: (*basepi*) [2015.5] salt.modules.reg Add spaces for strings split across multiple lines @ *2015-08-04T15:39:48Z*
- **PR** #25990: (*rallytime*) Back-port #25976 to 2015.5 @ *2015-08-04T14:36:53Z*
  - **PR** #25976: (*fleaflicker*) Typo in help output | refs: #25990
- **PR** #25996: (*attiasr*) fix msiexec package remove @ *2015-08-04T14:36:31Z*
- **PR** #25966: (*rallytime*) Back-port #25864 to 2015.5 @ *2015-08-03T18:48:26Z*
  - **ISSUE** #25863: (*peterdemin*) pkg.installed fails on already installed package if it is in versionlock.list | refs: #25864
  - **PR** #25864: (*peterdemin*) #25863 state.pkg.installed fix | refs: #25966
- **PR** #25967: (*rallytime*) Back-port #25917 to 2015.5 @ *2015-08-03T18:48:02Z*
  - **PR** #25917: (*jmdcal*) adding missing format string | refs: #25967
- **PR** #25895: (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5 @ *2015-08-03T17:12:37Z*
  - **ISSUE** #23764: (*es1o*) source_hash from local file is not supported. | refs: #25750
  - **PR** #25750: (*alekti*) Add file as supported protocol for file source_hash. Fixes #25701. | refs: #26020
  - **PR** #25704: (*cachedout*) Ensure prior alignment with master_type in 2014.7
  - **PR** #25657: (*MrCitron*) Add the ability to specify a base pattern for carbon returner
  - **PR** #25633: (*AkhterAli*) Update loader.py
- **PR** #25941: (*jfindlay*) add timelib to dependency versions @ *2015-08-03T12:23:42Z*
  - **ISSUE** #25850: (*ssgward*) Need to add packages to --versions-report | refs: #25941
- **PR** #25951: (*garethgreenaway*) Log when event.fire and event.fire_master fail. @ *2015-08-03T00:19:45Z*
- **PR** #25942: (*jfindlay*) typo in minion doc @ *2015-07-31T23:34:55Z*
  - **ISSUE** #25838: (*grep4linux*) docs disable_modules documentation typo | refs: #25942
- **PR** #25938: (*jacobhammons*) Doc on using syndic with multimaster @ *2015-07-31T23:05:05Z*
  - **PR** #14690: (*jacksontj*) Multi syndic | refs: #25938
- **PR** #25848: (*twangboy*) Added allusers="1" when installing msi @ *2015-07-31T20:33:17Z*
  - **ISSUE** #25839: (*twangboy*) ALLUSERS="1" should be a default when installing MSI's | refs: #25848
- **PR** #25898: (*jfindlay*) clarify and expand syndic docs @ *2015-07-31T20:01:23Z*
- **PR** #25927: (*jacksontj*) Pass actual renderers to the Reactor's Compiler @ *2015-07-31T20:00:17Z*
  - **ISSUE** #25852: (*UtahDave*) Salt loader is not loading Salt vars in reactor python renderer | refs: #25927
- **PR** #25921: (*cachedout*) Handle non-ascii in state log @ *2015-07-31T17:41:30Z*

  - **ISSUE** #25810: (*nvx*) winpkg highstate fails when a new package name contains a unicide character | refs: #25921
- **PR** #25919: (*TheBigBear*) Minor update to msi un-installer info @ *2015-07-31T17:39:48Z*
- **PR** #25905: (*rallytime*) Back-port #25982 to 2015.5 @ *2015-07-30T23:24:19Z*
  - **PR** #25892: (*TheBigBear*) Update 7-zip msi un-installer instructions | refs: #25905
- **PR** #25890: (*rallytime*) Back-port #25698 to 2015.5 @ *2015-07-30T23:12:09Z*
  - **ISSUE** #25577: (*yellow1912*) Wrong indentation in document | refs: #25696
  - **PR** #25698: (*rallytime*) Back-port #25659 to 2015.8 | refs: #25890
  - **PR** #25696: (*AkhterAli*) Update schedule.py
  - **PR** #25659: (*isbm*) Bugfix: crash at getting non-existing repo | refs: #25698
- **PR** #25894: (*jacobhammons*) Minor doc bug fixes @ *2015-07-30T23:02:34Z*
  - **ISSUE** #25650: (*jacksontj*) state.running documentation is incorrect | refs: #25894
  - **ISSUE** #24042: (*whiteinge*) The state_events setting is not documented | refs: #25894
  - **ISSUE** #23788: (*k5jj*) functions in drac.py module do not match documentation | refs: #25894
  - **ISSUE** #21296: (*Lothiraldan*) Possible minion enumeration using saltutil.find_job and eauth | refs: #25894
- **PR** #25877: (*rallytime*) Protect against passing a map file in addition to VM names with --destroy @ *2015-07-30T21:55:45Z*
  - **ISSUE** #24036: (*arthurlogilab*) [salt-cloud] Protect against passing command line arguments as names for the --destroy command in map files | refs: #25877
- **PR** #25870: (*rallytime*) Back-port #25824 to 2015.5 @ *2015-07-30T21:54:35Z*
  - **PR** #25824: (*klyr*) Fix get_managed() in file.py module for local files | refs: #25870
- **PR** #25885: (*t0rrant*) Update Debian changelog @ *2015-07-30T20:05:59Z*
- **PR** #25875: (*rallytime*) Back-port #25862 to 2015.5 @ *2015-07-30T17:34:02Z*
  - **ISSUE** #25478: (*zyio*) salt-ssh - Unable to locate current thin version | refs: #25862

- **PR** #25755: (*twangboy*) Fixed problem with dunder functions not being passed @ *2015-07-27T19:31:22Z*
  - **ISSUE** #25717: (*twangboy*) Problem with chocolatey module not loading | refs: #25755
- **PR** #25648: (*twangboy*) Clarified functionality of reg module, fixed state to work with new module @ *2015-07-27T19:30:33Z*
  - **ISSUE** #25352: (*m03*) reg.absent reporting incorrect results | refs: #25648
  - **ISSUE** #1: (*thatch45*) Enable regex on the salt cli

- **PR** #25740: (*rallytime*) Back-port #25722 to 2015.5 @ *2015-07-27T16:08:40Z*
  - **ISSUE** #25154: (*uvsmtid*) All data mixed on STDOUT together should generate valid JSON output | refs: #25722
  - **ISSUE** #25153: (*uvsmtid*) Multiple results should generate valid JSON output | refs: #25722
  - **PR** #25722: (*uvsmtid*) Minor docs changes to emphasize JSON output problems without *--static* option | refs: #25740
- **PR** #25739: (*rallytime*) Back-port #25709 to 2015.5 @ *2015-07-27T16:08:27Z*
  - **PR** #25709: (*colekowalski*) add direct-io-mode to mount_invisible_options | refs: #25739
  - **PR** #25699: (*rallytime*) Back-port #25660 to 2015.5 | refs: #25709
  - **PR** #25660: (*colekowalski*) add glusterfs' direct-io-mode to mount_invisible_keys | refs: #25699 #25709
- **PR** #25738: (*rallytime*) Back-port #25671 to 2015.5 @ *2015-07-27T16:08:23Z*
  - **PR** #25671: (*niq000*) added a parameter so verifying SSL is now optional instead of hard-coded | refs: #25738
- **PR** #25737: (*rallytime*) Back-port #25608 to 2015.5 @ *2015-07-27T16:08:18Z*
  - **ISSUE** #25229: (*rall0r*) Module git.latest kills target directory when test=True | refs: #25608
  - **PR** #25608: (*rall0r*) Fix: prevent git.latest from removing target | refs: #25737
- **PR** #25733: (*davidjb*) Avoid IndexError when listing mounts if mount output ends in newline @ *2015-07-27T16:08:05Z*
- **PR** #25705: (*blackduckx*) Support for setm augeas command. @ *2015-07-27T16:07:10Z*
  - **ISSUE** #22460: (*onmeac*) Command setm is not supported (yet) | refs: #25705
- **PR** #25703: (*cachedout*) Return to *str* for master_type for 2015.5 @ *2015-07-27T16:06:22Z*
- **PR** #25702: (*twangboy*) Fixed win_user module for groups with spaces in the name @ *2015-07-27T15:06:33Z*
  - **ISSUE** #25144: (*johnccfm*) user.present on Windows fails to add user to groups if group name contains a space | refs: #25702
- **PR** #25711: (*twangboy*) Fixed problem with win_servermanager.list_installed @ *2015-07-27T15:05:48Z*
  - **ISSUE** #25351: (*m03*) win_servermanager.list_installed failing with ``IndexError: list index out of range'' | refs: #25711
- **PR** #25714: (*cachedout*) Display warning when progressbar can't be loaded @ *2015-07-25T00:10:13Z*
  - **ISSUE** #25435: (*yee379*) progressbar dependency missing | refs: #25714
- **PR** #25699: (*rallytime*) Back-port #25660 to 2015.5 | refs: #25709 @ *2015-07-24T22:11:40Z*
  - **PR** #25660: (*colekowalski*) add glusterfs' direct-io-mode to mount_invisible_keys | refs: #25699 #25709
- **PR** #25694: (*s0undt3ch*) Salt-SSH fix for #25689 @ *2015-07-24T21:41:57Z*
  - **ISSUE** #25689: (*anlutro*) Minion log in salt-ssh | refs: #25694
- **PR** #25710: (*jahamn*) Integration Testcase for Issue 25250 @ *2015-07-24T20:57:33Z*
  - **ISSUE** #25250: (*wipfs*) `force' option in copy state deletes target file | refs: #25461 #25710
- **PR** #25680: (*basepi*) [2015.5] Move cmd.run jinja aliasing to a wrapper class to prevent side effects @ *2015-07-24T19:52:10Z*
  - **PR** #25049: (*terminalmage*) Fix cmd.run when cross-called in a state/execution module | refs: #25680

- **PR** #25682: (*basepi*) [2015.5] Fix parsing args with just a hash (#) @ *2015-07-24T19:52:01Z*
- **PR** #25695: (*stanislavb*) Configurable AWS region & region from IAM metadata @ *2015-07-24T19:36:40Z*
- **PR** #25645: (*kev009*) Fix pkgng provider to work with a sources list and the underlying pkg... @ *2015-07-24T16:33:18Z*
- **PR** #25677: (*aneeshusa*) Fix pacman.list_upgrades when refresh=True. @ *2015-07-24T16:30:06Z*
- **PR** #25675: (*UtahDave*) Use OS line endings with contents on file.managed @ *2015-07-24T16:29:50Z*
  - **ISSUE** #25674: (*UtahDave*) file.managed with contents parameter uses wrong line endings on Windows | refs: #25675
- **PR** #25676: (*basepi*) Update release candidate docs to 2015.8.0rc2 @ *2015-07-23T20:29:37Z*
- **PR** #25666: (*nmadhok*) Check if the properties exist before looping over them causing KeyError @ *2015-07-23T17:55:40Z*
  - **ISSUE** #25665: (*nmadhok*) salt-cloud VMware driver fails with KeyErrors if there's any existing machine in the VMware infrastructure in (invalid state) | refs: #25666
- **PR** #25656: (*anlutro*) Fix locale detection in debian/gentoo @ *2015-07-23T16:46:40Z*
- **PR** #25661: (*rallytime*) Back-port #25624 to 2015.5 @ *2015-07-23T16:26:48Z*
  - **PR** #25624: (*bobrik*) Fix typo in get_routes example for debian_ip | refs: #25661
- **PR** #25662: (*rallytime*) Back-port #25638 to 2015.5 @ *2015-07-23T16:26:40Z*
  - **ISSUE** #15209: (*hubez*) file.manage: source_hash not working with s3:// (2014.7.0rc1) | refs: #25638
  - **PR** #25638: (*TronPaul*) fix bad merge in 99fc7ec | refs: #25662
- **PR** #25644: (*cachedout*) pillar doc fix @ *2015-07-22T22:57:23Z*
  - **ISSUE** #25413: (*zizkebab*) pillar_opts default behavior is not reflected in the docs | refs: #25644
- **PR** #25642: (*cachedout*) Warn on pillar schedule delete @ *2015-07-22T22:04:12Z*
  - **ISSUE** #25540: (*dennisjac*) salt highstate schedule cannot be removed | refs: #25642
- **PR** #25598: (*twangboy*) Fixed problem trying to load file with name of boolean type @ *2015-07-22T17:07:49Z*
  - **ISSUE** #25437: (*lorengordon*) Stacktrace on Windows when running pkg.list_pkgs | refs: #25598 #25763
  - 7b79e433 Merge pull request #25598 from twangboy/fix_25437
- **PR** #25604: (*terminalmage*) Move patching of mock_open to within test @ *2015-07-22T16:53:55Z*
  - **ISSUE** #25323: (*terminalmage*) unit.modules.tls_test fails with older mock | refs: #25604
- **PR** #25609: (*s0undt3ch*) [2015.5] Update the bootstrap script to latest release v2015.07.22 @ *2015-07-22T16:28:52Z*
  - **ISSUE** #630: (*syphernl*) Allow for an include statement in config files | refs: #25609
  - **PR** #627: (*chjohnst*) add saltversion grain | refs: #25609
- **PR** #25603: (*terminalmage*) Add version_cmp function to yumpkg.py @ *2015-07-22T15:42:29Z*
  - **ISSUE** #21912: (*rvora*) pkg.latest not updating the package on CentOS though yum reports an update available | refs: #25603
- **PR** #25590: (*garethgreenaway*) 2015.5 scheduled jobs return data @ *2015-07-21T21:57:42Z*
  - **ISSUE** #25560: (*dennisjac*) scheduled highstate runs don't return results to the job cache | refs: #25590
- **PR** #25584: (*rallytime*) Back-port #24054 and #25576 to 2015.5 @ *2015-07-21T21:16:38Z*

  - **PR** #25576: (*pcn*) s3fs breaks when fetching files from s3 | refs: #25584
  - **PR** #24054: (*mgwilliams*) s3.head: return useful data | refs: #25584
- **PR** #25589: (*jahamn*) Fixes ssh_known_host not taking port into account @ *2015-07-21T21:15:06Z*
  - **ISSUE** #23626: (*mirko*) salt state `ssh_known_hosts' doesn't take `port' into account | refs: #25589
- **PR** #25573: (*EvaSDK*) Do not execute bootstrap script twice @ *2015-07-21T18:20:04Z*
  - **PR** #25465: (*EvaSDK*) 2015.5.3 LXC module fixes | refs: #25573
- **PR** #25580: (*attiasr*) use explicit utf-8 decoding (#25532) @ *2015-07-21T15:40:49Z*
  - **ISSUE** #25532: (*attiasr*) salt/modules/win_pkg.py list_pkgs is broken (encoding issues) | refs: #25556 #25580
- **PR** #25568: (*twangboy*) Fixed win_useradd module to add fullname @ *2015-07-21T14:30:25Z*
  - **ISSUE** #25206: (*jfindlay*) fullname issues with user.add state on windows | refs: #25568
- **PR** #25561: (*twangboy*) Fixed the gem module to work on windows… without injection @ *2015-07-20T21:12:15Z*
  - **ISSUE** #21041: (*deuscapturus*) state module gem.installed not working on Windows. | refs: #25430 #25561 #25428
  - **PR** #25428: (*twangboy*) Fixed the gem module to work on windows | refs: #25561
- **PR** #25521: (*cachedout*) Fix outputter for state.orch @ *2015-07-20T19:30:14Z*
- **PR** #25563: (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5 @ *2015-07-20T19:27:36Z*
  - **PR** #25416: (*cachedout*) Fix broken keyword
- **PR** #25559: (*cachedout*) Lint win_pkg @ *2015-07-20T17:46:29Z*
- **PR** #25556: (*attiasr*) fix for #25532 @ *2015-07-20T17:45:11Z*
  - **ISSUE** #25532: (*attiasr*) salt/modules/win_pkg.py list_pkgs is broken (encoding issues) | refs: #25556 #25580
- **PR** #25554: (*jfindlay*) verify_ssl=True for s3 ext pillar @ *2015-07-20T17:43:38Z*
  - **ISSUE** #25538: (*stanislavb*) S3 ext_pillar configuration requires verify_ssl | refs: #25554
- **PR** #25551: (*rallytime*) Backport #25530 to 2015.5 @ *2015-07-20T17:43:00Z*
  - **PR** #25530: (*andre-luiz-dos-santos*) The variable name must be last | refs: #25551
- **PR** #25533: (*attiasr*) port 445 for windows bootstraping @ *2015-07-20T15:13:06Z*
- **PR** #25525: (*gtmanfred*) add make _prepare an alias for postinitio @ *2015-07-20T15:12:38Z*
  - **ISSUE** #25432: (*gtmanfred*) [2015.5.3][raet] raet error with SaltRaetRoadStackJoiner | refs: #25525
- **PR** #25519: (*rallytime*) Backport vmware driver to 2015.5 branch @ *2015-07-20T15:11:26Z*
  - **ISSUE** #25511: (*rallytime*) Make provider --> driver change backward compatible | refs: #25519 #25519
  - **ISSUE** #23574: (*CedNantes*) Failed to Deploy Salt-Minion on a Win 2012 R2 using wmware Cloud Driver from Develop branch | refs: #25519
- **PR** #25542: (*Oro*) Fix hipchat.send_message when using API v2 @ *2015-07-20T15:09:13Z*
- **PR** #25531: (*rallytime*) Back-port #25529 to 2015.5 @ *2015-07-18T19:16:10Z*
  - **PR** #25529: (*davidjb*) Fix minor typo in best practice example | refs: #25531
- **PR** #25528: (*davidjb*) Fix typo in extend declaration doco @ *2015-07-18T14:22:06Z*

- **PR** #25517: (*rallytime*) Back-port #25486 to 2015.5 @ *2015-07-17T21:49:26Z*
  - **ISSUE** #25486: (*whiteinge*) Highstate outputter not used for state.apply | refs: #25517
  - **PR** #25485: (*attiasr*) fix file downloads on windows
- **PR** #25516: (*rallytime*) Back-port #25483 to 2015.5 @ *2015-07-17T21:49:05Z*
  - **ISSUE** #25479: (*alexandrsushko*) multiple mount.mounted of one device | refs: #25483
  - **PR** #25483: (*alexandrsushko*) Added `none' to the set of specialFSes | refs: #25516
- **PR** #25513: (*garethgreenaway*) fixes to schedule.add documentation in 2015.5 @ *2015-07-17T17:03:24Z*
  - **ISSUE** #25493: (*blackduckx*) Issue with job_args on schedule.add command | refs: #25513
- **PR** #25465: (*EvaSDK*) 2015.5.3 LXC module fixes | refs: #25573 @ *2015-07-17T15:57:54Z*
- **PR** #25506: (*s0undt3ch*) [2015.5] Update bootstrap script to latest stable release, v2015.07.17 @ *2015-07-17T15:40:38Z*
  - **ISSUE** #25456: (*julienlavergne*) [2015.8.0rc1] salt-bootstrap fails to install salt master | refs: #25506
  - **ISSUE** #25270: (*iggy*) [2015.8.0rc1] salt-bootstrap fails to properly install a minion | refs: #25506
  - **ISSUE** #625: (*whiteinge*) *cmd.run* state *user* flag is not working | refs: #25506 #632
  - **ISSUE** #611: (*fatbox*) Peer interface fails to return data occasionally | refs: #25506
  - **ISSUE** #607: (*thatch45*) next level -X support | refs: #25506
  - **ISSUE** #598: (*syphernl*) Explanation on how to execute interactive installs | refs: #25506
  - **ISSUE** #455: (*whiteinge*) Document common troubleshooting tips | refs: #25506
  - **PR** #624: (*chjohnst*) Docs are not correct with network.ping as args are not supported | refs: #25506
  - **PR** #621: (*akoumjian*) Adding ec2 cloud-init bootstrap docs | refs: #25506
  - **PR** #606: (*terminalmage*) need empty line before code blocks. added ones that were missing. | refs: #25506
  - **PR** #602: (*terminalmage*) State-related documentation changes | refs: #25506
- **PR** #25498: (*jfindlay*) only read /proc/1/cmdline if it exists @ *2015-07-17T15:35:33Z*
  - **ISSUE** #25454: (*mschiff*) Regression: salt 2015.5 not working in secure chroot anymore. | refs: #25498
- **PR** #25487: (*rallytime*) Back-port #25464 to 2015.5 @ *2015-07-16T16:58:36Z*
  - **PR** #25464: (*jquast*) docfix: ``cache_jobs: False'' => grains_cache: False'' | refs: #25487
- **PR** #25482: (*oeuftete*) Fix docker.running detection of running container @ *2015-07-16T16:58:29Z*
  - **PR** #2015: (*thekuffs*) Esky / bbfreeze support
- **PR** #25468: (*joejulian*) Add support for pyOpenSSL > 0.10 @ *2015-07-16T15:10:30Z*
  - **ISSUE** #25384: (*rickh563*) pyopenssl 0.14 requirement in 2015.5.3 does not work in RHEL6 : ZD-364 | refs: #25468
- **PR** #25467: (*rallytime*) Add lxml dependency to opennebula docs @ *2015-07-16T15:09:57Z*
- **PR** #25461: (*jahamn*) Update file, if force option and content not same @ *2015-07-15T20:15:07Z*
  - **ISSUE** #25250: (*wipfs*) `force' option in copy state deletes target file | refs: #25461 #25710
  - **ISSUE** #24647: (*nmadhok*) salt.states.file.copy does not copy the file if it already exists with force=True | refs: #25461

- **PR** #25438: (*rallytime*) Reduce digital_ocean_v2 API call frequency @ *2015-07-15T19:40:18Z*
  - **ISSUE** #25431: (*namcois*) Digital Ocean v2 reducing API calls by adding per_page | refs: #25438
- **PR** #25457: (*jacksontj*) Saltnado @ *2015-07-15T17:50:12Z*
  - **PR** #25427: (*tony-cocco*) Saltnado runner client results in blocking call despite being set-up as Runner.async | refs: #25457
- **PR** #25459: (*jahamn*) Fixed `defulats' typo in verify.py @ *2015-07-15T16:53:06Z*
- **PR** #25426: (*jquast*) bugfix: trailing "...done" in rabbitmq output (backport from `develop' to 2015.5) @ *2015-07-15T14:48:05Z*
- **PR** #25433: (*jleroy*) Support for IPv6 addresses scopes in network.interfaces (ifconfig) @ *2015-07-15T14:44:09Z*
  - **PR** #25151: (*jleroy*) Support for IPv6 addresses scopes in network.interfaces | refs: #25274 #25433
- **PR** #25430: (*twangboy*) Disabled rbenv execution module for Windows @ *2015-07-15T14:41:18Z*
  - **ISSUE** #21041: (*deuscapturus*) state module gem.installed not working on Windows. | refs: #25430 #25561 #25428
  - **ISSUE** #1846: (*seanchannel*) development dependencies
- **PR** #25420: (*techhat*) Move S3 to use AWS Signature Version 4 @ *2015-07-14T22:03:09Z*
- **PR** #25418: (*twangboy*) Fixed problem with file.managed test=True @ *2015-07-14T21:26:59Z*
  - **ISSUE** #20441: (*deuscapturus*) State module file.managed returns an error on Windows and test=Test | refs: #25418
- **PR** #25417: (*ahus1*) extended documentation about dependencies for dig module @ *2015-07-14T20:49:51Z*
- **PR** #25411: (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5 @ *2015-07-14T17:55:26Z*
  - **PR** #25375: (*cachedout*) Fix error in config.py for master_type
  - **PR** #25324: (*jacobhammons*) Latest help theme updates
- **PR** #25406: (*anlutro*) Force arguments to aptpkg.version_cmp into strings @ *2015-07-14T16:15:41Z*
- **PR** #25408: (*rallytime*) Back-port #25399 to 2015.5 @ *2015-07-14T16:09:06Z*
  - **PR** #25399: (*jarpy*) Demonstrate per-minion client_acl. | refs: #25408

- **PR** #26326: (*rallytime*) Make ec2.create_snapshot return less unweildly and more relevant @ *2015-08-14T19:40:47Z*
  - **ISSUE** #24484: (*codehotter*) clouds/ec2.py: create_snapshot throws exception | refs: #26326

- **PR** #26306: (*rallytime*) Move VM creation details dict to log.trace @ *2015-08-14T17:39:52Z*
  - **ISSUE** #16179: (*UtahDave*) Salt Cloud -l debug includes the entire bootstrap script twice in its output | refs: #26306

20.2.43 Salt 2015.5.6 Release Notes

Version 2015.5.6 is a bugfix release for *2015.5.0*.

Security Fixes

CVE-2015-6941 - `win_useradd` module and `salt-cloud` display passwords in debug log

Updated the `win_useradd` module return data to no longer include the password of the newly created user. The password is now replaced with the string `XXX-REDACTED-XXX`. Updated the Salt Cloud debug output to no longer display `win_password` and `sudo_password` authentication credentials.

CVE-2015-6918 - Git modules leaking HTTPS auth credentials to debug log

Updated the Git state and execution modules to no longer display HTTPS basic authentication credentials in loglevel debug output on the Salt master. These credentials are now replaced with `REDACTED` in the debug output. Thanks to Andreas Stieger <asteiger@suse.com> for bringing this to our attention.

Changes for v2015.5.5..v2015.5.6

Total Merges: **144**

Changes:

- **PR** #27557: (*jfindlay*) add doc motivating mine vs grains
- **PR** #27515: (*jfindlay*) save iptables rules on SuSE
- **PR** #27509: (*jfindlay*) tell the user why the gluster module does not work
- **PR** #27379: (*jfindlay*) document and check dict type for pip env_vars
- **PR** #27516: (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5
- **PR** #27472: (*cachedout*) Change recommended schema for data field in mysql event table
- **PR** #27468: (*cachedout*) Fix 27351
- **PR** #27479: (*aboe76*) fix locale on opensuse and suse #27438
- **PR** #27483: (*rallytime*) Outputters should sync to output, not outputters, on the minion.
- **PR** #27484: (*rallytime*) Back-port #27434 and #27470 to 2015.5
- **PR** #27469: (*twangboy*) Added quotes to version numbers example
- **PR** #27467: (*cachedout*) file.managed: check `contents_{pillar|grain}` result
- **PR** #27419: (*rallytime*) Amend error log to include multiple tips for troubleshooting.
- **PR** #27426: (*rallytime*) Don't stacktrace if there are conflicting id errors in highstate
- **PR** #27408: (*rallytime*) Fix avail_locations function for the softlayer_hw driver in 2015.5

- **PR** #27410: (*jacobhammons*) Fix css layout Refs #27389
- **PR** #27336: (*rallytime*) [2015.5] Fixup salt-cloud logging
- **PR** #27358: (*lorengordon*) Escape search replacement text, fixes #27356
- **PR** #27345: (*rallytime*) Allow use of rst header links by separating options out from yaml example
- **PR** #26903: (*bersace*) Review defaults.get
- **PR** #27317: (*efficks*) State unzip should use unzip command instead of unzip_cmd.
- **PR** #27309: (*rallytime*) Change a value list to a comma-separated string in boto_route53.present
- **PR** #27311: (*jfindlay*) discuss replacement occurrences in file doc
- **PR** #27310: (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5
- **PR** #27308: (*terminalmage*) Fix refresh_db regression in yumpkg.py
- **PR** #27286: (*terminalmage*) Add a configurable timer for minion return retries
- **PR** #27278: (*rallytime*) Back-port #27256 to 2015.5
- **PR** #27277: (*rallytime*) Back-port #27230 to 2015.5
- **PR** #27253: (*jfindlay*) 2015.5 -> 2015.5.0
- **PR** #27244: (*garethgreenaway*) Exception in cloud.ec2.create_snapshot
- **PR** #27231: (*jfindlay*) only write cron file if it is changed
- **PR** #27233: (*basepi*) [2015.5] Add stub release notes for 2015.5.6
- **PR** #27208: (*basepi*) [2015.5] Add test.nop state
- **PR** #27201: (*jfindlay*) rename hash_hostname to hash_known_hosts
- **PR** #27214: (*jacksontj*) Correctly support https, port 443 is not a requirement
- **PR** #27172: (*rallytime*) Back-port #27150 to 2015.5
- **PR** #27194: (*rallytime*) Back-port #27180 to 2015.5
- **PR** #27176: (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5
- **PR** #27170: (*rallytime*) Update Getting Started with GCE docs to use cloud.profiles or cloud.profiles.d examples
- **PR** #27167: (*rallytime*) Back-port #27148 to 2015.5
- **PR** #27168: (*techhat*) Add further gating of impacket library
- **PR** #27166: (*rallytime*) Allow a full-query for EC2, even if there are no profiles defined
- **PR** #27162: (*rallytime*) Be explicit in using ``SoftLayer'' for service queries in SoftLayer drivers
- **PR** #27149: (*twangboy*) Fixed problem with add/remove path
- **PR** #27147: (*rallytime*) Enforce bounds in the GCE Regex
- **PR** #27128: (*eguven*) don't show diff for test run if show_diff=False
- **PR** #27116: (*jacobhammons*) Update latest to 2015.8, 2015.5 is now previous
- **PR** #27033: (*jfindlay*) Merge #27019
- **PR** #26942: (*Arabus*) Fix docker.run
- **PR** #26977: (*abh*) Add support for PEERNTP network interface configuration
- **PR** #27023: (*jfindlay*) add test support for htpasswd state mod

- **PR** #27074: (*twangboy*) Replaced password with redacted when displayed
- **PR** #27073: (*rallytime*) Remove ``use develop branch'' warning from LXC tutorial
- **PR** #27054: (*rallytime*) Back-port #27029 to 2015.5
- **PR** #27053: (*rallytime*) Back-port #26992 to 2015.5
- **PR** #27052: (*rallytime*) Back-port #26930 to 2015.5
- **PR** #27049: (*johanek*) Run repoquery less
- **PR** #27070: (*stanislavb*) Deprecate salt.utils.iam in Carbon
- **PR** #27030: (*jfindlay*) Backport #26938
- **PR** #27025: (*cachedout*) Better try and error handling for prep_jid
- **PR** #27035: (*terminalmage*) useradd.py: Use contextmanager to prevent leaked filehandles
- **PR** #27034: (*rallytime*) Update softlayer docs for where to find apikey
- **PR** #27024: (*rallytime*) Back-port #27004 to 2015.5
- **PR** #27027: (*rallytime*) Back-port #27013 to 2015.5
- **PR** #27026: (*rallytime*) Back-port #27011 to 2015.5
- **PR** #26972: (*twangboy*) Catch the 404 error from fileclient
- **PR** #26951: (*terminalmage*) Fix timezone module for CentOS
- **PR** #26875: (*marccardinal*) LXC gateway provisioned only when IP is provided
- **PR** #26997: (*twangboy*) Fixed symlinks for windows (don't use user root)
- **PR** #27001: (*twangboy*) Added CLI Example for reg.delete_key_recursive
- **PR** #26996: (*jacobhammons*) Beacon doc updates
- **PR** #26868: (*joejulian*) Use the actual device name when checking vgdisplay
- **PR** #26955: (*dsumsky*) S3 ext_pillar module has broken caching mechanism (backport to 2015.5)
- **PR** #26987: (*rallytime*) Back-port #26966 to 2015.5
- **PR** #26915: (*rallytime*) Update Joyent Cloud Tests
- **PR** #26971: (*rallytime*) Fix a couple of typos in reactor docs
- **PR** #26976: (*thatch45*) Revert ``file.symlink gets windows account instead of root''
- **PR** #26975: (*whiteinge*) Remove mocks from rest_cherrypy integration tests; fix groups check bug
- **PR** #26899: (*twangboy*) file.symlink gets windows account instead of root
- **PR** #26960: (*rallytime*) Fix bash code block formatting in CherryPy netapi docs
- **PR** #26940: (*rallytime*) Fix minor doc typo in client api
- **PR** #26871: (*rallytime*) Back-port #26852 to 2015.5
- **PR** #26851: (*jacobhammons*) states/pkgrepo examples, suse installation updates
- **PR** #26817: (*jfindlay*) modify groupadd for rhel 5
- **PR** #26824: (*pravka*) [salt-cloud] Fix creating droplet from snapshot in digital_ocean provider
- **PR** #26823: (*joejulian*) use dbus instead of localectl
- **PR** #26820: (*jfindlay*) add default param in _parse_localectl in locale mod

- **PR** #26821: (*twangboy*) Fixed user.rename function in windows
- **PR** #26803: (*twangboy*) Added check for PyMySQL if MySQLdb import fails
- **PR** #26815: (*jfindlay*) stringify linode id before performing str actions
- **PR** #26800: (*jacobhammons*) Doc bug fixes
- **PR** #26793: (*rallytime*) Don't stacktrace if ``name'' is specified as a minion id in a map file
- **PR** #26790: (*rallytime*) Update Saltify docs to be more accurate and helpful
- **PR** #26787: (*jfindlay*) merge #26775
- **PR** #26759: (*terminalmage*) Backport PR #26726 to 2015.5 branch
- **PR** #26768: (*garethgreenaway*) Fixes to ipset in 2015.5 for #26628
- **PR** #26753: (*jfindlay*) import elementree from _compat in ilo exec mod
- **PR** #26736: (*twangboy*) Changed import from smbconnection to smb3
- **PR** #26714: (*jfindlay*) add exception placeholder for older msgpacks
- **PR** #26710: (*rallytime*) Update GCE driver to return True, False or a new name in __virtual__()
- **PR** #26709: (*rallytime*) Ensure VM name is valid before trying to create Linode VM
- **PR** #26617: (*terminalmage*) Fix Windows failures in pip module due to raw string formatting
- **PR** #26700: (*kev009*) Ignore the first element of kern.disks split, which is the sysctl name
- **PR** #26695: (*terminalmage*) Better HTTPS basic auth redaction for 2015.5 branch
- **PR** #26694: (*terminalmage*) Backport #26693 to 2015.5
- **PR** #26681: (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5
- **PR** #26676: (*rallytime*) Back-port #26648 to 2015.5
- **PR** #26677: (*rallytime*) Back-port #26653 to 2015.5
- **PR** #26675: (*rallytime*) Back-port #26631 to 2015.5
- **PR** #26655: (*cheng0919*) Update win_dns_client.py
- **PR** #26662: (*jacobhammons*) update version to 2015.5
- **PR** #26651: (*jfindlay*) add 2015.5.4 notes to 2015.5.5 notes
- **PR** #26525: (*jfindlay*) document check_file_meta args, remove unused arg
- **PR** #26561: (*stanislavb*) Leave salt.utils.s3 location fallback to salt.utils.aws
- **PR** #26573: (*rallytime*) Don't stacktrace if using private_ips and delete_sshkeys together
- **PR** #26563: (*rallytime*) Fix error detection when salt-cloud config is missing a master's address
- **PR** #26641: (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5
- **PR** #26620: (*rallytime*) Also add -Z to script args for cloud tests
- **PR** #26618: (*rallytime*) Add script_args: `-P' to Ubuntu 14 profiles for nightly cloud tests
- **PR** #26612: (*rallytime*) Use an available image to test against
- **PR** #26576: (*rallytime*) Ensure GCE and EC2 configuration checks are correct
- **PR** #26580: (*rallytime*) Avoid race condition when assigning floating IPs to new VMs
- **PR** #26581: (*terminalmage*) Skip tests that don't work with older mock

- **PR** #26591: (*rallytime*) Back-port #26554 to 2015.5
- **PR** #26565: (*cachedout*) Fix many errors with __virtual__ in tests
- **PR** #26553: (*rallytime*) Back-port #26548 to 2015.5
- **PR** #26552: (*rallytime*) Back-port #26542 to 2015.5
- **PR** #26551: (*rallytime*) Back-port #26539 to 2015.5
- **PR** #26549: (*rallytime*) Back-port #26524 to 2015.5
- **PR** #26527: (*jfindlay*) check exists and values in boto_elb listeners
- **PR** #26446: (*stanislavb*) Fetch AWS region from EC2 instance metadata
- **PR** #26546: (*nmadhok*) Do not raise KeyError when calling avail_images if VM/template is in disconnected state
- **PR** #26537: (*jfindlay*) Merge #26481
- **PR** #26528: (*zmalone*) Fixing encrypt to instructions in the 2015.5 branch

20.2.44 Salt 2015.5.7 Release Notes

Note: A significant orchestrate issue #29110 was discovered during the release process of 2015.5.7, so it has not been officially released. Please use 2015.5.8 instead.

Changes:

- **PR** #28731: (*garethgreenaway*) Fixes to salt scheduler in 2015.5, ensuring that return_job is only used on minion scheduler
- **PR** #28857: (*rallytime*) Back-port #28851 to 2015.5
- **PR** #28856: (*rallytime*) Back-port #28853 to 2015.5
- **PR** #28832: (*basepi*) [2015.5] Backport #28826
- **PR** #28833: (*basepi*) [2015.5] Increase the default gather_job_timeout
- **PR** #28829: (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5
- **PR** #28756: (*MrCitron*) Fix #25775
- **PR** #28786: (*chrigl*) closes #28783
- **PR** #28776: (*rallytime*) Back-port #28740 to 2015.5
- **PR** #28760: (*dmyerscough*) Fixing CherryPy key bug
- **PR** #28746: (*rallytime*) Back-port #28718 to 2015.5
- **PR** #28705: (*cachedout*) Account for new headers class in tornado 4.3
- **PR** #28699: (*rallytime*) Back-port #28670 to 2015.5
- **PR** #28703: (*rallytime*) Back-port #28690 to 2015.5
- **PR** #28694: (*s0undt3ch*) [2015.5] Update to latest bootstrap script v2015.11.09

- **PR** #28669: (*rallytime*) Use the -q argument to strip extraneous messages from rabbitmq
- **PR** #28645: (*jacksontj*) Rework minion return_retry_timer
- **PR** #28668: (*twangboy*) Fixed join_domain and unjoin_domain for Windows
- **PR** #28666: (*jfindlay*) define r_data before using it in file module
- **PR** #28662: (*cachedout*) Add note about disabling master_alive_interval
- **PR** #28627: (*twangboy*) Backport win_useradd
- **PR** #28617: (*cachedout*) Set restrictive umask on module sync
- **PR** #28622: (*gravyboat*) Update puppet module wording
- **PR** #28563: (*s0undt3ch*) [2015.5] Update to latest bootstrap script v2015.11.04
- **PR** #28541: (*twangboy*) Fixed problem with system.set_computer_name
- **PR** #28537: (*jfindlay*) decode filename to utf-8 in file.recurse state
- **PR** #28529: (*rallytime*) Update contributing and documentation pages to recommend submitting against branches
- **PR** #28548: (*nmadhok*) [Backport] [2015.5] Tasks can be in queued state instead of running
- **PR** #28531: (*rallytime*) Add versionadded directives to virtualenv_mod state/module
- **PR** #28508: (*twangboy*) Fixed windows tests
- **PR** #28525: (*rallytime*) Fix spacing in doc examples for boto_route53 state and module
- **PR** #28517: (*rallytime*) Add state_auto_order defaults to True note to ordering docs
- **PR** #28512: (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5
- **PR** #28448: (*gwaters*) added a note to the tutorial for redhat derivatives
- **PR** #28406: (*rallytime*) Back-port #28381 to 2015.5
- **PR** #28413: (*rallytime*) Back-port #28400 to 2015.5
- **PR** #28366: (*erchn*) mark repo not enabled when pkgrepo state passes in disable: True
- **PR** #28373: (*beverlcl*) Fixing bug #28372 for use_carrier option on bonding network interfaces.
- **PR** #28359: (*rallytime*) Back-port #28358 to 2015.5
- **PR** #28346: (*twangboy*) Fix installer
- **PR** #28315: (*gwaters*) Adding a working example of setting pillar data on the cli
- **PR** #28211: (*terminalmage*) Fix for ext_pillar being compiled twice in legacy git_pillar code (2015.5 branch)
- **PR** #28263: (*cachedout*) New channel for event.send
- **PR** #28293: (*cachedout*) Minor grammar changes
- **PR** #28271: (*gwaters*) Update tutorial documentation
- **PR** #28280: (*0xf10e*) Correct Jinja function load_* to import_*
- **PR** #28255: (*cachedout*) Add __cli opt
- **PR** #28213: (*rallytime*) If record returned None, don't continue with the state. Something went wrong
- **PR** #28238: (*basepi*) [2015.5] Fix schedule.present always diffing
- **PR** #28174: (*lorengordon*) Add support for multiline regex in file.replace

- **PR** #28175: (*twangboy*) Fixes #19673
- **PR** #28140: (*rallytime*) Add OpenBSD installation documentation to 2015.5 branch
- **PR** #28138: (*rallytime*) Back-port #28130 EC2 Sizes Only portion to 2015.5
- **PR** #28097: (*jacksontj*) For all multi-part messages, check the headers. If the header is not ...
- **PR** #28117: (*rallytime*) Clean up stacktrace when master can't be reached in lxc cloud driver
- **PR** #28110: (*terminalmage*) Add explanation of file_client: local setting masterless mode
- **PR** #28109: (*rallytime*) Add created reactor event to lxc cloud driver
- **PR** #27996: (*rallytime*) Don't fail if pip package is already present and pip1 is installed
- **PR** #28056: (*rallytime*) Back-port #28033 to 2015.5
- **PR** #28059: (*rallytime*) Back-port #28040 to 2015.5
- **PR** #28047: (*cachedout*) Restore FTP functionality to file client
- **PR** #28032: (*twangboy*) Fixed win_path.py
- **PR** #28037: (*rallytime*) Back-port #28003 to 2015.5
- **PR** #28031: (*jacobhammons*) Updated release notes with additional CVE information
- **PR** #28008: (*jfindlay*) platform independent line endings in hosts mod
- **PR** #28012: (*rallytime*) Clean up stack trace when something goes wrong with minion output
- **PR** #27995: (*jacobhammons*) added link to grains security FAQ to targeting and pillar topics.
- **PR** #27986: (*jacobhammons*) Changed current release to 5.6 and added CVE to release notes
- **PR** #27913: (*pass-by-value*) Set default
- **PR** #27876: (*terminalmage*) 2015.5 branch: Fix traceback when 2015.8 git ext_pillar config schema used
- **PR** #27726: (*jfindlay*) deprecate hash_hostname in favor of hash_known_hosts
- **PR** #27776: (*jfindlay*) return message when local jobs_cache not found
- **PR** #27766: (*jfindlay*) better check for debian userdel error
- **PR** #27758: (*iggy*) Remove redundant text from syslog returner
- **PR** #27841: (*terminalmage*) Detect Manjaro Linux as Arch derivative
- **PR** #27852: (*rallytime*) Back-port #27806 to 2015.5
- **PR** #27838: (*basepi*) [2015.5] Fix highstate outputter for jobs.lookup_jid
- **PR** #27791: (*eguven*) 2015.5 postgres_user groups backport
- **PR** #27759: (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5
- **PR** #27732: (*jacobhammons*) update docs for __virtual__ and __virtualname__
- **PR** #27747: (*Sacro*) Chocolatey doesn't have a help command.
- **PR** #27733: (*jacobhammons*) hardening topic - updates to docs.saltstack.com theme
- **PR** #27706: (*jacobhammons*) Assorted doc bugs
- **PR** #27695: (*rallytime*) Back-port #27671 to 2015.5
- **PR** #27524: (*jfindlay*) parse pkgng output in quiet mode for >= 1.6.1
- **PR** #27686: (*rallytime*) Back-port #27476 to 2015.5

- **PR** #27684: (*rallytime*) Back-port #27656 to 2015.5
- **PR** #27683: (*rallytime*) Back-port #27659 to 2015.5
- **PR** #27682: (*rallytime*) Back-port #27566 to 2015.5
- **PR** #27681: (*rallytime*) Back-port #25928 to 2015.5
- **PR** #27680: (*rallytime*) Back-port #27535 to 2015.5
- **PR** #27442: (*JaseFace*) Ensure we pass on the enable setting if present, or use the default of True if not in build_schedule_item()
- **PR** #27641: (*rallytime*) Gate the psutil import and add depends doc for diskusage beacon
- **PR** #27644: (*rallytime*) Back-port #27640 to 2015.5
- **PR** #27612: (*rallytime*) Fix GCE external_ip stacktraces in 2015.5
- **PR** #27568: (*jacobhammons*) regenerated man pages

20.2.45 Salt 2015.5.8 Release Notes

Security Fix

CVE-2015-8034: Saving `state.sls` cache data to disk with insecure permissions

This affects users of the `state.sls` function. The state run cache on the minion was being created with incorrect permissions. This file could potentially contain sensitive data that was inserted via jinja into the state SLS files. The permissions for this file are now being set correctly. Thanks to @zmalone for bringing this issue to our attention.

Changes

Generated at: 2015-11-23T23:16:23Z

Total Merges: **118**

Changes:

- **PR** #29128: (*cachedout*) Set a safer default value for ret in saltmod
- **PR** #29122: (*cachedout*) Fix broken state orchestration
- **PR** #29096: (*rallytime*) Back-port #29093 to 2015.5
- **PR** #29084: (*rallytime*) Back-port #29055 to 2015.5
- **PR** #29083: (*rallytime*) Back-port #29053 to 2015.5
- **PR** #28932: (*twangboy*) Fixed user.present / user.absent in windows
- **PR** #29011: (*rallytime*) Back-port #28630 to 2015.5
- **PR** #28982: (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5
- **PR** #28949: (*whiteinge*) Add sync_sdb execution function
- **PR** #28930: (*twangboy*) Added missing import mmap required by file.py
- **PR** #28908: (*rallytime*) A couple of spelling fixes for doc conventions page.
- **PR** #28902: (*whiteinge*) Fix missing JSON support for /keys endpoint

- **PR** #28897: (*rallytime*) Back-port #28873 to 2015.5
- **PR** #28871: (*basepi*) [2015.5] Fix command generation for mdadm.assemble
- **PR** #28864: (*jfindlay*) add 2015.5.7 release notes
- **PR** #28731: (*garethgreenaway*) Fixes to salt scheduler in 2015.5, ensuring that return_job is only used on minion scheduler
- **PR** #28857: (*rallytime*) Back-port #28851 to 2015.5
- **PR** #28856: (*rallytime*) Back-port #28853 to 2015.5
- **PR** #28832: (*basepi*) [2015.5] Backport #28826
- **PR** #28833: (*basepi*) [2015.5] Increase the default gather_job_timeout
- **PR** #28829: (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5
- **PR** #28756: (*MrCitron*) Fix #25775
- **PR** #28786: (*chrigl*) closes #28783
- **PR** #28776: (*rallytime*) Back-port #28740 to 2015.5
- **PR** #28760: (*dmyerscough*) Fixing CherryPy key bug
- **PR** #28746: (*rallytime*) Back-port #28718 to 2015.5

- **PR** #27684: (*rallytime*) Back-port #27656 to 2015.5
- **PR** #27683: (*rallytime*) Back-port #27659 to 2015.5
- **PR** #27682: (*rallytime*) Back-port #27566 to 2015.5
- **PR** #27681: (*rallytime*) Back-port #25928 to 2015.5
- **PR** #27680: (*rallytime*) Back-port #27535 to 2015.5
- **PR** #27442: (*JaseFace*) Ensure we pass on the enable setting if present, or use the default of True if not in build_schedule_item()
- **PR** #27641: (*rallytime*) Gate the psutil import and add depends doc for diskusage beacon
- **PR** #27644: (*rallytime*) Back-port #27640 to 2015.5
- **PR** #27612: (*rallytime*) Fix GCE external_ip stacktraces in 2015.5
- **PR** #27568: (*jacobhammons*) regenerated man pages

20.2.46 Salt 2015.5.9 Release Notes

Extended changelog courtesy of Todd Stansell (https://github.com/tjstansell/salt-changelogs):

Generated at: 2016-01-08T23:02:31Z

Total Merges: **44**

Changes:

- **PR** #30237: (*jacobhammons*) Updated man pages and doc version for 2015.5.9

- **PR** #30207: (*rallytime*) Use correct spacing in rabbitmq state examples
- **PR** #30191: (*jacobhammons*) Updated doc site banners
- **PR** #30125: (*abednarik*) Update user home event when createhome is set to False
- **PR** #30127: (*jsutton*) Updating documentation and example minion config for random_master/master_shuffle.
- **PR** #30110: (*markckimball*) Fixed flag sent to salt.utils.http in order for verify_ssl to work correctly
- **PR** #30093: (*zmalone*) Noting that file_roots and ``state tree'' should both be avoided
- **PR** #30097: (*cachedout*) Note concern about cleartext password in docs for shadow.gen_password
- **PR** #30089: (*mpreziuso*) Fixes terminology and adds more accurate details about the algorithms
- **PR** #30086: (*cachedout*) Document that gitfs needs recent libs
- **PR** #30070: (*cachedout*) Add documentation on debugging salt-ssh
- **PR** #30059: (*mpreziuso*) Fixes wrong function scope
- **PR** #30025: (*jtand*) Skipping some Boto tests until resolved moto issue
- **PR** #29949: (*aletourneau*) Enhanced netscaler docstring
- **PR** #29941: (*cachedout*) Fix spelling error in boto_vpc
- **PR** #29908: (*cachedout*) Allow kwargs to be passed to pacman provide for update func
- **PR** #29909: (*abednarik*) FreeBSD pkgng fix for non-interactive install.
- **PR** #29730: (*rallytime*) Update docker-py version requirement to 0.6.0 for dockerio.py files
- **PR** #29715: (*rallytime*) Install correct package version, if provided, for npm state.
- **PR** #29721: (*terminalmage*) Fix display of multiline strings when iterating over a list
- **PR** #29646: (*rallytime*) Don't stacktrace on kwargs.get if kwargs=None
- **PR** #29673: (*rallytime*) Default value should be False and not `False'
- **PR** #29527: (*jfindlay*) 2015.5.7 notes: add note about not being released
- **PR** #29539: (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5
- **PR** #29504: (*rallytime*) Document userdata_file option for EC2 driver
- **PR** #29507: (*rallytime*) Switch volumes and del_*_on_destroy example ordering
- **PR** #29469: (*abednarik*) Added Documentation note in salt cloud.
- **PR** #29461: (*dmyerscough*) Fix resource limits, systemd sets the default too small
- **PR** #29439: (*rallytime*) Back-port #28656 to 2015.5
- **PR** #29418: (*jacobhammons*) Added CVE 2015-8034 to 2015.5.8 release notes
- **PR** #29389: (*jacobhammons*) updated version numbers in documentation
- **PR** #28501: (*twangboy*) Requested fixes for 26898
- **PR** #29348: (*jtand*) Fixes an file.search on python2.6
- **PR** #29336: (*rallytime*) Back-port #29276 to 2015.5
- **PR** #29333: (*rallytime*) Back-port #29280 to 2015.5
- **PR** #29316: (*basepi*) [2015.5] Merge forward from 2014.7 to 2015.5
- **PR** #29216: (*clan*) size is 0 doesn't mean no data, e.g, /proc/version

- **PR** #29261: (*attiasr*) fix incorrect reinstallation of windows pkg
- **PR** #29214: (*cro*) Doc for salt.utils.http should say verify_ssl not ssl_verify.
- **PR** #29204: (*lorengordon*) Use os.path.join to return full path to ca bundle

20.2.47 Salt 2014.7.0 Release Notes - Codename Helium

This release is the largest Salt release ever, with more features and commits then any previous release of Salt. Everything from the new RAET transport to major updates in Salt Cloud and the merging of Salt API into the main project.

Important: The Fedora/RHEL/CentOS **salt-master** package has been modified for this release. The following components of Salt have been broken out and placed into their own packages:

- salt-syndic
- salt-cloud
- salt-ssh

When the **salt-master** package is upgraded, these components will be removed, and they will need to be manually installed.

Important: Compound/pillar matching have been temporarily disabled for the `mine` and `publish` modules for this release due to the possibility of inferring pillar data using pillar glob matching. A proper fix is now in the 2014.7 branch and scheduled for the 2014.7.1 release, and compound matching and non-globbing pillar matching will be re-enabled at that point.

Compound and pillar matching for normal salt commands are unaffected.

New Transport!

RAET Transport Option

This has been a HUGE amount of work, but the beta release of Salt with RAET is ready to go. RAET is a reliable queuing transport system that has been developed in partnership with a number of large enterprises to give Salt an alternative to ZeroMQ and a way to get Salt to scale well beyond tens of thousands of servers. Unlike ZeroMQ, RAET is completely asynchronous in every aspect of its operation and has been developed using the flow programming paradigm. This allows for many new capabilities to be added to Salt in the upcoming releases.

Please keep in mind that this is a beta release of RAET and we hope for bugs to be worked out, performance to be better realized and more in the 2015.5.0 release.

Simply stated, users running Salt with RAET should expect some hiccups as we hammer out the update. This is a BETA release of Salt RAET.

For information about how to use Salt with RAET please see the *tutorial*.

Salt SSH Enhancements

Salt SSH has just entered a new league, with substantial updates and improvements to make salt-ssh more reliable and easier then ever! From new features like the ansible roster and fileserver backends to the new pypi salt-ssh

installer to lowered deps and a swath of bugfixes, salt-ssh is basically reborn!

Install salt-ssh Using pip

Salt-ssh is now pip-installable!

https://pypi.python.org/pypi/salt-ssh/

Pip will bring in all of the required deps, and while some deps are compiled, they all include pure python implementations, meaning that any compile errors which may be seen can be safely ignored.

```
pip install salt-ssh
```

Fileserver Backends

Salt-ssh can now use the salt fileserver backend system. This allows for the gitfs, hgfs, s3, and many more ways to centrally store states to be easily used with salt-ssh. This also allows for a distributed team to easily use a centralized source.

Saltfile Support

The new saltfile system makes it easy to have a user specific custom extended configuration.

Ext Pillar

Salt-ssh can now use the external pillar system. Making it easier then ever to use salt-ssh with teams.

No More sshpass

Thanks to the enhancements in the salt vt system, salt-ssh no longer requires sshpass to send passwords to ssh. This also makes the manipulation of ssh calls substantially more flexible, allowing for intercepting ssh calls in a much more fluid way.

Pure Python Shim

The salt-ssh call originally used a shell script to discover what version of python to execute with and determine the state of the ssh code deployment. This shell script has been replaced with a pure python version making it easy to increase the capability of the code deployment without causing platform inconsistency issues with different shell interpreters.

Custom Module Delivery

Custom modules are now seamlessly delivered. This makes the deployment of custom grains, states, execution modules and returners a seamless process.

CP Module Support

Salt-ssh now makes simple file transfers easier then ever! The *cp* module allows for files to be conveniently sent from the salt fileserver system down to systems.

More Thin Directory Options

Salt ssh functions by copying a subset of the salt code, or *salt thin* down to the target system. In the past this was always transferred to /tmp/.salt and cached there for subsequent commands.

Now, salt thin can be sent to a random directory and removed when the call is complete with the *-W* option. The new *-W* option still uses a static location but will clean up that location when finished.

The default *salt thin* location is now user defined, allowing multiple users to cleanly access the same systems.

State System Enhancements

New Imperative State Keyword ``Listen''

The new `listen` and `listen_in` keywords allow for completely imperative states by calling the `mod_watch()` routine after all states have run instead of re-ordering the states.

Mod Aggregate Runtime Manipulator

The new `mod_aggregate` system allows for the state system to rewrite the state data during execution. This allows for state definitions to be aggregated dynamically at runtime.

The best example is found in the *pkg* state. If `mod_aggregate` is turned on, then when the first pkg state is reached, the state system will scan all of the other running states for pkg states and take all other packages set for install and install them all at once in the first pkg state.

These runtime modifications make it easy to run groups of states together. In future versions, we hope to fill out the `mod_aggregate` system to build in more and more optimizations.

For more documentation on `mod_aggregate`, see *the documentation*.

New Requisites: onchanges and onfail

The new `onchanges` and `onchanges_in` requisites make a state apply only if there are changes in the required state. This is useful to execute post hooks after changes occur on a system.

The other new requisites, `onfail`, and `onfail_in`, allow for a state to run in reaction to the failure of another state.

For more information about these new requisites, see the *requisites documentation*.

Global onlyif and unless

The `onlyif` and `unless` options can now be used for any state declaration.

Use `names` to expand and override values

The *names declaration* in Salt's state system can now override or add values to the expanded data structure. For example:

```
my_users:
  user.present:
    - names:
      - larry
      - curly
      - moe:
        - shell: /bin/zsh
        - groups:
          - wheel
    - shell: /bin/bash
```

Major Features

Scheduler Additions

The Salt scheduler system has received MAJOR enhancements, allowing for cron-like scheduling and much more granular timing routines. See `here` for more info.

Red Hat 7 Family Support

All the needed additions have been made to run Salt on RHEL 7 and derived OSes like CentOS and Scientific.

Fileserver Backends in salt-call

Fileserver backends like gitfs can now be used without a salt master! Just add the fileserver backend configuration to the minion config and execute salt-call. This has been a much-requested feature and we are happy to finally bring it to our users.

Amazon Execution Modules

An entire family of execution modules further enhancing Salt's Amazon Cloud support. They include the following:

- `Autoscale Groups` (includes `state support`) -- related: `Launch Control` states
- `Cloud Watch` (includes `state support`)
- `Elastic Cache` (includes `state support`)
- `Elastic Load Balancer` (includes `state support`)
- `IAM Identity and Access Management` (includes `state support`)
- `Route53 DNS` (includes `state support`)
- `Security Groups` (includes `state support`)
- `Simple Queue Service` (includes `state support`)

LXC Runner Enhancements

BETA The Salt LXC management system has received a number of enhancements which make running an LXC cloud entirely from Salt an easy proposition.

Next Gen Docker Management

The Docker support in Salt has been increased at least ten fold. The Docker API is now completely exposed and Salt ships with Docker data tracking systems which make automating Docker deployments very easy.

Peer System Performance Improvements

The peer system communication routines have been refined to make the peer system substantially faster.

SDB

Encryption at rest for configs

GPG Renderer

Encrypted pillar at rest

OpenStack Expansion

Lots of new OpenStack stuff

Queues System

Ran change external queue systems into Salt events

Multi Master Failover Additions

Connecting to multiple masters is more dynamic then ever

Chef Execution Module

Managing Chef with Salt just got even easier!

salt-api Project Merge

The `salt-api` project has been merged into Salt core and is now available as part of the regular `salt-master` package install. No API changes were made, the **`salt-api`** script and init scripts remain intact.

`salt-api` has always provided Yet Another Pluggable Interface to Salt (TM) in the form of ``netapi'' modules. These are modules that bind to a port and start a service. Like many of Salt's other module types, netapi modules often have library and configuration dependencies. See the documentation for each module for instructions.

See also:

The full list of netapi modules.

Synchronous and Asynchronous Execution of Runner and Wheel Modules

salt.runner.RunnerClient and *salt.wheel.WheelClient* have both gained complimentary `cmd_sync` and `cmd_async` methods allowing for synchronous and asynchronous execution of any Runner or Wheel module function, all protected using Salt's *external authentication* system. `salt-api` benefits from this addition as well.

`rest_cherrypy` Additions

The *rest_cherrypy* netapi module provides the main REST API for Salt.

Web Hooks

This release of course includes the Web Hook additions from the most recent `salt-api` release, which allows external services to signal actions within a Salt infrastructure. External services such as Amazon SNS, Travis-CI, or GitHub, as well as internal services that cannot or should not run a Salt minion daemon can be used as first-class components in Salt's rich orchestration capabilities.

The raw HTTP request body is now available in the event data. This is sometimes required information for checking an HMAC signature in order to verify a HTTP request. As an example, Amazon or GitHub requests are signed this way.

Generating and Accepting Minion Keys

The */key* convenience URL generates a public and private key for a minion, automatically pre-accepts the public key on the Salt Master, and returns both keys as a tarball for download.

This allows for easily bootstrapping the key on a new minion with a single HTTP call, such as with a Kickstart script, all using regular shell tools.

```
curl -sS http://salt-api.example.com:8000/keys \
        -d mid=jerry \
        -d username=kickstart \
        -d password=kickstart \
        -d eauth=pam \
        -o jerry-salt-keys.tar
```

Fileserver Backend Enhancements

All of the fileserver backends have been overhauled to be faster, lighter, and more reliable. The VCS backends (*gitfs*, *hgfs*, and *svnfs*) have also received a **lot** of new features.

Additionally, most config parameters for the VCS backends can now be configured on a per-remote basis, allowing for global config parameters to be overridden for a specific gitfs/hgfs/svnfs remote.

New `gitfs` Features

Pygit2 and Dulwich

In addition to supporting GitPython, support for pygit2 (0.20.3 and newer) and dulwich have been added. Provided a compatible version of pygit2 is installed, it will now be the default provider. The config parameter `gitfs_provider` has been added to allow one to choose a specific provider for gitfs.

Mountpoints

Prior to this release, to serve a file from gitfs at a salt fileserver URL of `salt://foo/bar/baz.txt`, it was necessary to ensure that the parent directories existed in the repository. A new config parameter `gitfs_mountpoint` allows gitfs remotes to be exposed starting at a user-defined `salt://` URL.

Environment Whitelisting/Blacklisting

By default, gitfs will expose all branches and tags as Salt fileserver environments. Two new config parameters, `gitfs_env_whitelist`, and `gitfs_env_blacklist`, allow more control over which branches and tags are exposed. More detailed information on how these two options work can be found in the *Gitfs Walkthrough*.

Expanded Authentication Support

As of pygit2 0.20.3, both http(s) and SSH key authentication are supported, and Salt now also supports both authentication methods when using pygit2. Keep in mind that pygit2 0.20.3 is not yet available on many platforms, so those who had been using authenticated git repositories with a passphraseless key should stick to GitPython if a new enough pygit2 is not yet available for the platform on which the master is running.

A full explanation of how to use authentication can be found in the *Gitfs Walkthrough*.

New `hgfs` Features

Mountpoints

This feature works exactly like its *gitfs counterpart*. The new config parameter is called `hgfs_mountpoint`.

Environment Whitelisting/Blacklisting

This feature works exactly like its *gitfs counterpart*. The new config parameters are called `hgfs_env_whitelist` and `hgfs_env_blacklist`.

New `svnfs` Features

Mountpoints

This feature works exactly like its *gitfs counterpart*. The new config parameter is called `svnfs_mountpoint`.

Environment Whitelisting/Blacklisting

This feature works exactly like its *gitfs counterpart*. The new config parameters are called `svnfs_env_whitelist` and `svnfs_env_blacklist`.

Configurable Trunk/Branches/Tags Paths

Prior to this release, the paths where trunk, branches, and tags were located could only be in directories named ``trunk'', ``branches'', and ``tags'' directly under the root of the repository. Three new config parameters (`svnfs_trunk`, `svnfs_branches`, and `svnfs_tags`) allow SVN repositories which are laid out differently to be used with svnfs.

New `minionfs` Features

Mountpoint

This feature works exactly like its *gitfs counterpart*. The new config parameter is called `minionfs_mountpoint`. The one major difference is that, as minionfs doesn't use multiple remotes (it just serves up files pushed to the master using `cp.push`) there is no such thing as a per-remote configuration for `minionfs_mountpoint`.

Changing the Saltenv from Which Files are Served

A new config parameter (`minionfs_env`) allows minionfs files to be served from a Salt fileserver environment other than `base`.

Minion Whitelisting/Blacklisting

By default, minionfs will expose the pushed files from all minions. Two new config parameters, `minionfs_whitelist`, and `minionfs_blacklist`, allow minionfs to be restricted to serve files from only the desired minions.

Pyobjects Renderer

Salt now ships with with the `Pyobjects Renderer` that allows for construction of States using pure Python with an idiomatic object interface.

New Modules

In addition to the Amazon modules mentioned above, there are also several other new execution modules:

- `Oracle`
- `Random`
- `Redis`
- `Amazon Simple Queue Service`
- `Block Device Management`
- `CoreOS etcd`

- *Genesis*
- *InfluxDB*
- *Server Density*
- *Twilio Notifications*
- *Varnish*
- *ZNC IRC Bouncer*
- *SMTP*

New Runners

- *Map/Reduce Style*
- *Queue*

New External Pillars

- *CoreOS etcd*

New Salt-Cloud Providers

- *Aliyun ECS Cloud*
- *LXC Containers*
- *Proxmox (OpenVZ containers & KVM)*

Salt Call Change

When used with a returner, salt-call now contacts a master if `--local` is not specicified.

Deprecations

salt.modules.virtualenv_mod

- Removed deprecated `memoize` function from `salt/utils/__init__.py` (deprecated)
- Removed deprecated `no_site_packages` argument from `create` function (deprecated)
- Removed deprecated `check_dns` argument from `minion_config` and `apply_minion_config` functions (deprecated)
- Removed deprecated `OutputOptionsWithTextMixIn` class from `salt/utils/parsers.py` (deprecated)
- Removed the following deprecated functions from `salt/modules/ps.py`: - `physical_memory_usage` (deprecated) - `virtual_memory_usage` (deprecated) - `cached_physical_memory` (deprecated) - `physical_memory_buffers` (deprecated)
- Removed deprecated cloud arguments from `cloud_config` function in `salt/config.py`: - `vm_config` (deprecated) - `vm_config_path` (deprecated)

- Removed deprecated `libcloud_version` function from `salt/cloud/libcloudfuncs.py` (deprecated)
- Removed deprecated `CloudConfigMixIn` class from `salt/utils/parsers.py` (deprecated)

20.2.48 Salt 2014.7.1 Release Notes

release 2015-01-12

Version 2014.7.1 is a bugfix release for *2014.7.0*.

The changes include:

- Fixed gitfs serving symlinks in *`file.recurse`* states (issue 17700)
- Fixed holding of multiple packages (YUM) when combined with version pinning (issue 18468)
- Fixed use of Jinja templates in masterless mode with non-roots fileserver backend (issue 17963)
- Re-enabled pillar and compound matching for mine and publish calls. Note that pillar globbing is still disabled for those modes, for security reasons. (issue 17194)
- Fix for `tty: True` in salt-ssh (issue 16847)
- Fix for supervisord states when supervisor not installed to system python (issue 18044)
- Fix for logging when `log_level='quiet'` for *`cmd.run`* (issue 19479)

20.2.49 Salt 2014.7.2 Release Notes

release 2015-02-09

Version 2014.7.2 is a bugfix release for *2014.7.0*.

The changes include:

- Fix erroneous warnings for systemd service enabled check (issue 19606)
- Fix FreeBSD kernel module loading, listing, and persistence *`kmod`* (issue 197151, issue 19682)
- Allow case-sensitive npm package names in the *`npm state`*. This may break behavior for people expecting the state to lowercase their npm package names for them. The *`npm module`* was never affected by mandatory lowercasing. (issue 20329)
- Deprecate the `activate` parameter for pip.install for both the *`module`* and the `state`. If `bin_env` is given and points to a virtualenv, there is no need to activate that virtualenv in a shell for pip to install to the virtualenv.
- Fix a file-locking bug in gitfs (issue 18839)
- Deprecated `archive_user` in favor of standardized `user` parameter in `state` and added `group` parameter.

20.2.50 Salt 2014.7.3 Release Notes

release TBA

Version 2014.7.3 is a bugfix release for *2014.7.0*.

Changes:

- Multi-master minions mode no longer route fileclient operations asymetrically. This fixes the source of many multi-master bugs where the minion would become unrepsonsive from one or more masters.
- Fix bug wherein network.iface could produce stack traces.
- net.arp will no longer be made available unless arp is installed on the system.
- Major performance improvements to Saltnado
- Allow KVM module to operate under KVM itself or VMware Fusion
- Various fixes to the Windows installation scripts
- Fix issue where the syndic would not correctly propagate loads to the master job cache.
- Improve error handling on invalid /etc/network/interfaces file in salt networking modules
- Fix bug where a response status was not checked for in fileclient.get_url
- Enable eauth when running salt in batch mode
- Increase timeout in Boto Route53 module
- Fix bugs with Salt's `tar' module option parsing
- Fix parsing of NTP servers on Windows
- Fix issue with blockdev tuning not reporting changes correctly
- Update to the latest Salt bootstrap script
- Update Linode salt-cloud driver to use either linode-python or apache-libcloud
- Fix for s3.query function to return correct headers
- Fix for s3.head returning None for files that exist
- Fix the disable function in win_service module so that the service is disabled correctly
- Fix race condition between master and minion when making a directory when both daemons are on the same host
- Fix an issue where file.recurse would fail at the root of an svn repo when the repo has a mountpoint
- Fix an issue where file.recurse would fail at the root of an hgfs repo when the repo has a mountpoint
- Fix an issue where file.recurse would fail at the root of an gitfs repo when the repo has a mountpoint
- Add status.master capability for Windows.
- Various fixes to ssh_known_hosts
- Various fixes to states.network bonding for Debian
- The debian_ip.get_interfaces module no longer removes nameservers.
- Better integration between grains.virtual and systemd-detect-virt and virt-what
- Fix traceback in sysctl.present state output
- Fix for issue where mount.mounted would fail when superopts were not a part of mount.active (extended=True). Also mount.mounted various fixes for Solaris and FreeBSD.
- Fix error where datetimes were not correctly safeguarded before being passed into msgpack.
- Fix file.replace regressions. If the pattern is not found, and if dry run is False, and if *backup* is False, and if a pre-existing file exists with extension *.bak*, then that backup file will be overwritten. This backup behavior is a result of how *fileinput* works. Fixing it requires either passing through the file twice (the first time only to search for content and set a flag), or rewriting *file.replace* so it doesn't use *fileinput*

- VCS filreserver fixes/optimizations
- Catch fileserver configuration errors on master start
- Raise errors on invalid gitfs configurations
- set_locale when locale file does not exist (Redhat family)
- Fix to correctly count active devices when created mdadm array with spares
- Fix to correctly target minions in batch mode
- Support ssh:// urls using the gitfs dulwhich backend
- New fileserver runner
- Fix various bugs with argument parsing to the publish module.
- Fix disk.usage for Synology OS
- Fix issue with tags occurring twice with docker.pulled
- Fix incorrect key error in SMTP returner
- Fix condition which would remount loopback filesystems on every state run
- Remove requsites from listens after they are called in the state system
- Make system implementation of service.running aware of legacy service calls
- Fix issue where publish.publish would not handle duplicate responses gracefully.
- Accept Kali Linux for aptpkg salt execution module
- Fix bug where cmd.which could not handle a dirname as an argument
- Fix issue in ps.pgrep where exceptions were thrown on Windows.

Known issues:

- In multimaster mode, a minion may become temporarily unresponsive if modules or pillars are refreshed at the same time that one or more masters are down. This can be worked around by setting `auth_timeout' and `auth_tries' down to shorter periods.

20.2.51 Salt 2014.7.4 Release Notes

release 2015-03-30

Version 2014.7.4 is a bugfix release for *2014.7.0*.

This is a security release. The security issues fixed have only been present since 2014.7.0, and only users of the two listed modules are vulnerable. The following CVEs have been resolved:

- CVE-2015-1838 SaltStack: insecure /tmp file handling in salt/modules/serverdensity_device.py
- CVE-2015-1839 SaltStack: insecure /tmp file handling in salt/modules/chef.py

Changes:

- Multi-master minions mode no longer route fileclient operations asymetrically. This fixes the source of many multi-master bugs where the minion would become unrepsonsive from one or more masters.
- Fix bug wherein network.iface could produce stack traces.
- net.arp will no longer be made available unless arp is installed on the system.
- Major performance improvements to Saltnado

- Allow KVM module to operate under KVM itself or VMware Fusion
- Various fixes to the Windows installation scripts
- Fix issue where the syndic would not correctly propagate loads to the master job cache.
- Improve error handling on invalid /etc/network/interfaces file in salt networking modules
- Fix bug where a response status was not checked for in fileclient.get_url
- Enable eauth when running salt in batch mode
- Increase timeout in Boto Route53 module
- Fix bugs with Salt's `tar' module option parsing
- Fix parsing of NTP servers on Windows
- Fix issue with blockdev tuning not reporting changes correctly
- Update to the latest Salt bootstrap script
- Update Linode salt-cloud driver to use either linode-python or apache-libcloud
- Fix for s3.query function to return correct headers
- Fix for s3.head returning None for files that exist
- Fix the disable function in win_service module so that the service is disabled correctly
- Fix race condition between master and minion when making a directory when both daemons are on the same host
- Fix an issue where file.recurse would fail at the root of an svn repo when the repo has a mountpoint
- Fix an issue where file.recurse would fail at the root of an hgfs repo when the repo has a mountpoint
- Fix an issue where file.recurse would fail at the root of an gitfs repo when the repo has a mountpoint
- Add status.master capability for Windows.
- Various fixes to ssh_known_hosts
- Various fixes to states.network bonding for Debian
- The debian_ip.get_interfaces module no longer removes nameservers.
- Better integration between grains.virtual and systemd-detect-virt and virt-what
- Fix traceback in sysctl.present state output
- Fix for issue where mount.mounted would fail when superopts were not a part of mount.active (extended=True). Also mount.mounted various fixes for Solaris and FreeBSD.
- Fix error where datetimes were not correctly safeguarded before being passed into msgpack.
- Fix file.replace regressions. If the pattern is not found, and if dry run is False, and if *backup* is False, and if a pre-existing file exists with extension *.bak*, then that backup file will be overwritten. This backup behavior is a result of how *fileinput* works. Fixing it requires either passing through the file twice (the first time only to search for content and set a flag), or rewriting *file.replace* so it doesn't use *fileinput*
- VCS filreserver fixes/optimizations
- Catch fileserver configuration errors on master start
- Raise errors on invalid gitfs configurations
- set_locale when locale file does not exist (Redhat family)
- Fix to correctly count active devices when created mdadm array with spares

- Fix to correctly target minions in batch mode
- Support ssh:// urls using the gitfs dulwhich backend
- New fileserver runner
- Fix various bugs with argument parsing to the publish module.
- Fix disk.usage for Synology OS
- Fix issue with tags occurring twice with docker.pulled
- Fix incorrect key error in SMTP returner
- Fix condition which would remount loopback filesystems on every state run
- Remove requsites from listens after they are called in the state system
- Make system implementation of service.running aware of legacy service calls
- Fix issue where publish.publish would not handle duplicate responses gracefully.
- Accept Kali Linux for aptpkg salt execution module
- Fix bug where cmd.which could not handle a dirname as an argument
- Fix issue in ps.pgrep where exceptions were thrown on Windows.

Known issues:

- In multimaster mode, a minion may become temporarily unresponsive if modules or pillars are refreshed at the same time that one or more masters are down. This can be worked around by setting `auth_timeout' and `auth_tries' down to shorter periods.
- There are known issues with batch mode operating on the incorrect number of minions. This bug can be patched with the change in Pull Request #22464.
- The *fun*, *state*, and *unless* keywords are missing from the state internals, which can cause problems running some states. This bug can be patched with the change in Pull Request #22365.

20.2.52 Salt 2014.7.5 Release Notes

release 2015-04-16

Version 2014.7.5 is a bugfix release for *2014.7.0*.

Changes:

- Fixed a key error bug in salt-cloud
- Updated man pages to better match documentation
- Fixed bug concerning high CPU usage with salt-ssh
- Fixed bugs with remounting cvfs and fuse filesystems
- Fixed bug with alowing requisite tracking of entire sls files
- Fixed bug with aptpkg.mod_repo returning OK even if apt-add-repository fails
- Increased frequency of ssh terminal output checking
- Fixed malformed locale string in localmod module
- Fixed checking of available version of package when accept_keywords were changed
- Fixed bug to make git.latest work with empty repositories

- Added **kwargs to service.mod_watch which removes warnings about *enable* and *__reqs__* not being supported by the function
- Improved state comments to not grow so quickly on failed requisites
- Added force argument to service to trigger force_reload
- Fixed bug to andle pkgrepo keyids that have been converted to int
- Fixed module.portage_config bug with appending accept_keywords
- Fixed bug to correctly report disk usage on windows minion
- Added the ability to specify key prefix for S3 ext_pillar
- Fixed issues with batch mode operating on the incorrect number of minions
- Fixed a bug with the proxmox cloud provider stacktracing on disk definition
- Fixed a bug with the changes dictionary in the file state
- Fixed the TCP keep alive settings to work better with SREQ caching
- Fixed many bugs within the iptables state and module
- Fixed bug with states by adding *fun*, *state*, and *unless* to the state runtime internal keywords listing
- Added ability to eAuth against Active Directory
- Fixed some salt-ssh issues when running on Fedora 21
- Fixed grains.get_or_set_hash to work with multiple entries under same key
- Added better explanations and more examples of how the Reactor calls functions to docs
- Fixed bug to not pass *ex_config_drive* to libcloud unless it's explicitly enabled
- Fixed bug with pip.install on windows
- Fixed bug where puppet.run always returns a 0 retcode
- Fixed race condition bug with minion scheduling via pillar
- Made efficiency improvements and bug fixes to the windows installer
- Updated environment variables to fix bug with pygit2 when running salt as non-root user
- Fixed cas behavior on data module -- data.cas was not saving changes
- Fixed GPG rendering error
- Fixed strace error in virt.query
- Fixed stacktrace when running chef-solo command
- Fixed possible bug wherein uncaught exceptions seem to make zmq3 tip over when threading is involved
- Fixed argument passing to the reactor
- Fixed glibc caching to prevent bug where salt-minion getaddrinfo in dns_check() never got updated nameservers

Known issues:

- In multimaster mode, a minion may become temporarily unresponsive if modules or pillars are refreshed at the same time that one or more masters are down. This can be worked around by setting `auth_timeout' and `auth_tries' down to shorter periods.

20.2.53 Salt 2014.7.6 Release Notes

release 2015-05-18

Version 2014.7.6 is a bugfix release for *2014.7.0*.

This release is a security release. A minor issue was found, as cited below:

- CVE-2015-4017 -- Certificates are not verified when connecting to server in the Aliyun and Proxmox modules

Only users of the Aliyun or Proxmox cloud modules are at risk. The vulnerability does not exist in the latest 2015.5.0 release of Salt.

Changes:

- salt.runners.cloud.action() has changed the *fun* keyword argument to *func*. Please update any calls to this function in the cloud runner.

Extended Changelog Courtesy of Todd Stansell (https://github.com/tjstansell/salt-changelogs):

- **PR** #23810: (*rallytime*) Backport #23757 to 2014.7 @ *2015-05-18T15:30:21Z*
  - **PR** #23757: (*clan*) use abspath, do not eliminating symlinks | refs: #23810
  - aee00c8 Merge pull request #23810 from rallytime/bp-23757
  - fb32c32 use abspath, do not eliminating symlinks
- **PR** #23809: (*rallytime*) Fix virtualport section of virt.get_nics loop @ *2015-05-18T15:30:09Z*
  - **ISSUE** #20198: (*jcftang*) virt.get_graphics, virt.get_nics are broken, in turn breaking other things | refs: #23809
  - **PR** #21487: (*rallytime*) Backport #21469 to 2014.7 | refs: #23809
  - **PR** #21469: (*vdesjardins*) fixes #20198: virt.get_graphics and virt.get_nics calls in module virt | refs: #21487
  - 6b3352b Merge pull request #23809 from rallytime/virt_get_nics_fix
  - 0616fb7 Fix virtualport section of virt.get_nics loop
- **PR** #23823: (*gtmanfred*) add link local for ipv6 @ *2015-05-17T12:48:25Z*
  - 188f03f Merge pull request #23823 from gtmanfred/2014.7
  - 5ef006d add link local for ipv6
- **PR** #23802: (*gtmanfred*) if it is ipv6 ip_to_int will fail @ *2015-05-16T04:06:59Z*
  - **PR** #23573: (*techhat*) Scan all available networks for public and private IPs | refs: #23802
  - f3ca682 Merge pull request #23802 from gtmanfred/2014.7
  - 2da98b5 if it is ipv6 ip_to_int will fail
- **PR** #23488: (*cellscape*) LXC cloud fixes @ *2015-05-15T18:09:35Z*
  - **ISSUE** #16424: (*stanvit*) salt-run cloud.create fails with saltify
  - d9af0c3 Merge pull request #23488 from cellscape/lxc-cloud-fixes
  - 64250a6 Remove profile from opts after creating LXC container
  - c4047d2 Set destroy=True in opts when destroying cloud instance
  - 9e1311a Store instance names in opts when performing cloud action
  - 934bc57 Correctly pass custom env to lxc-attach

  - 7fb85f7 Preserve test=True option in cloud states
  - 9771b5a Fix detection of absent LXC container in cloud state
  - fb24f0c Report failure when failed to create/clone LXC container
  - 2d9aa2b Avoid shadowing variables in lxc module
  - 792e102 Allow overriding profile options in lxc.cloud_init_interface
  - 42bd64b Return changes on successful lxc.create from salt-cloud
  - 4409eab Return correct result when creating cloud LXC container
  - 377015c Issue #16424: List all providers when creating salt-cloud instance without profile
- **PR** #23748: (*basepi*) [2014.7] Log salt-ssh roster render errors more assertively and verbosely @ *2015-05-14T22:38:10Z*
  - **ISSUE** #22332: (*rallytime*) [salt-ssh] Add a check for host in /etc/salt/roster | refs: #23748
  - 808bbe1 Merge pull request #23748 from basepi/salt-ssh.roster.host.check
  - bc53e04 Log entire exception for render errors in roster
  - 753de6a Log render errors in roster to error level
  - e01a7a9 Always let the real YAML error through
- **PR** #23731: (*twangboy*) Fixes #22959: Trying to add a directory to an unmapped drive in windows @ *2015-05-14T21:59:14Z*
  - **ISSUE** #22959: (*highlyunavailable*) Windows Salt hangs if file.directory is trying to write to a drive that doesn't exist
  - 72cf360 Merge pull request #23731 from twangboy/fix_22959
  - 88e5495 Fixes #22959: Trying to add a directory to an unmapped drive in windows
- **PR** #23730: (*rallytime*) Backport #23729 to 2014.7 @ *2015-05-14T21:58:34Z*
  - **PR** #23729: (*rallytime*) Partially merge #23437 (grains fix) | refs: #23730
  - **PR** #23437: (*cedwards*) Grains item patch | refs: #23729
  - 2610195 Merge pull request #23730 from rallytime/bp-23729
  - 1877cae adding support for nested grains to grains.item
- **PR** #23688: (*twangboy*) Added inet_pton to utils/validate/net.py for ip.set_static_ip in windows @ *2015-05-14T16:15:56Z*
  - 3e9df88 Merge pull request #23688 from twangboy/fix_23415
  - 6a91169 Fixed unused-import pylint error
  - 5e25b3f fixed pylint errors
  - 1a96766 Added inet_pton to utils/validate/net.py for ip.set_static_ip in windows
- **PR** #23680: (*cachedout*) Rename kwarg in cloud runner @ *2015-05-13T19:44:02Z*
  - **ISSUE** #23403: (*iamfil*) salt.runners.cloud.action fun parameter is replaced | refs: #23680
  - 1b86460 Merge pull request #23680 from cachedout/issue_23403
  - d5986c2 Rename kwarg in cloud runner
- **PR** #23674: (*cachedout*) Handle lists correctly in grains.list_prsesent @ *2015-05-13T18:34:58Z*

  - **ISSUE** #23548: (*kkaig*) grains.list_present produces incorrect (?) output | refs: #23674
  - cd64af0 Merge pull request #23674 from cachedout/issue_23548
  - da8a2f5 Handle lists correctly in grains.list_prsesent
- **PR** #23672: (*twangboy*) Fix user present @ *2015-05-13T18:30:09Z*
  - d322a19 Merge pull request #23672 from twangboy/fix_user_present
  - 731e7af Merge branch `2014.7' of https://github.com/saltstack/salt into fix_user_present
  - d6f70a4 Fixed user.present to create password in windows
- **PR** #23670: (*rallytime*) Backport #23607 to 2014.7 @ *2015-05-13T18:27:17Z*
  - **ISSUE** #23604: (*Azidburn*) service.dead on systemd Minion create an Error Message | refs: #23607
  - **PR** #23607: (*Azidburn*) Fix for #23604. No error reporting. Exitcode !=0 are ok | refs: #23670
  - 43f7025 Merge pull request #23670 from rallytime/bp-23607
  - ed30dc4 Fix for #23604. No error reporting. Exitcode !=0 are ok
- **PR** #23661: (*rallytime*) Merge #23640 with whitespace fix @ *2015-05-13T15:47:30Z*
  - **ISSUE** #22141: (*Deshke*) grains.get_or_set_hash render error if hash begins with ``%'' | refs: #23640
  - **PR** #23640: (*cachedout*) Add warning to get_or_set_hash about reserved chars | refs: #23661
  - 0f006ac Merge pull request #23661 from rallytime/merge-23640
  - 4427f42 Whitespace fix
  - dd91154 Add warning to get_or_set_hash about reserved chars
- **PR** #23639: (*cachedout*) Handle exceptions raised by __virtual__ @ *2015-05-13T15:11:12Z*
  - **ISSUE** #23452: (*michaelforge*) minion crashed with empty grain | refs: #23639
  - 84e2ef8 Merge pull request #23639 from cachedout/issue_23452
  - d418b49 Syntax error!
  - 45b4015 Handle exceptions raised by __virtual__
- **PR** #23637: (*cachedout*) Convert str master to list @ *2015-05-13T15:08:19Z*
  - **ISSUE** #23611: (*hubez*) master_type set to `failover' but `master' is not of type list but of type <type `str'> | refs: #23637
  - bd9b94b Merge pull request #23637 from cachedout/issue_23611
  - 56cb1f5 Fix typo
  - f6fcf19 Convert str master to list
- **PR** #23595: (*rallytime*) Backport #23549 to 2014.7 @ *2015-05-12T21:19:40Z*
  - **PR** #23549: (*vr-jack*) Update __init__.py | refs: #23595
  - f20c0e4 Merge pull request #23595 from rallytime/bp-23549
  - 6efcac0 Update __init__.py
- **PR** #23594: (*rallytime*) Backport #23496 to 2014.7 @ *2015-05-12T21:19:34Z*
  - **ISSUE** #23110: (*martinhoefling*) Copying files from gitfs in file.recurse state fails
  - **PR** #23496: (*martinhoefling*) Fix for issue #23110 | refs: #23594

  - 1acaf86 Merge pull request #23594 from rallytime/bp-23496
  - d5ae1d2 Fix for issue #23110 This resolves issues when the freshly created directory is removed by fileserver.update.
- **PR** #23593: (*rallytime*) Backport #23442 to 2014.7 @ *2015-05-12T21:19:26Z*
  - **PR** #23442: (*clan*) add directory itself to keep list | refs: #23593
  - 2c221c7 Merge pull request #23593 from rallytime/bp-23442
  - 39869a1 check w/ low['name'] only
  - 304cc49 another fix for file defined w/ id, but require name
  - 8814d41 add directory itself to keep list
- **PR** #23606: (*twangboy*) Fixed checkbox for starting service and actually starting it @ *2015-05-12T21:18:50Z*
  - fadd1ef Merge pull request #23606 from twangboy/fix_installer
  - 038331e Fixed checkbox for starting service and actually starting it
- **PR** #23592: (*rallytime*) Backport #23389 to 2014.7 @ *2015-05-12T16:44:42Z*
  - **ISSUE** #22908: (*karanjad*) Add failhard option to salt orchestration | refs: #23389
  - **PR** #23389: (*cachedout*) Correct fail_hard typo | refs: #23592
  - 10b3f0f Merge pull request #23592 from rallytime/bp-23389
  - 734cc43 Correct fail_hard typo
- **PR** #23573: (*techhat*) Scan all available networks for public and private IPs | refs: #23802 @ *2015-05-12T15:22:22Z*
  - cd34b9b Merge pull request #23573 from techhat/novaquery
  - f92db5e Linting
  - 26e00d3 Scan all available networks for public and private IPs
- **PR** #23558: (*jfindlay*) reorder emerge command line @ *2015-05-12T15:17:46Z*
  - **ISSUE** #23479: (*danielmorlock*) Typo in pkg.removed for Gentoo? | refs: #23558
  - 2a72cd7 Merge pull request #23558 from jfindlay/fix_ebuild
  - 45404fb reorder emerge command line
- **PR** #23530: (*dr4Ke*) salt-ssh state: fix including all salt:// references @ *2015-05-12T15:13:43Z*
  - **ISSUE** #23355: (*dr4Ke*) salt-ssh: `sources: salt://' files from `pkg' state are not included in salt_state.tgz | refs: #23530
  - a664a3c Merge pull request #23530 from dr4Ke/fix_salt-ssh_to_include_pkg_sources
  - 5df6a80 fix pylint warning
  - d0549e5 salt-ssh state: fix including all salt:// references
- **PR** #23433: (*twangboy*) Obtain all software from the registry @ *2015-05-11T22:47:52Z*
  - **ISSUE** #23004: (*b18*) 2014.7.5 - Windows - pkg.list_pkgs - ``nxlog'' never shows up in output. | refs: #23433
  - 55c3869 Merge pull request #23433 from twangboy/list_pkgs_fix
  - 8ab5b1b Fix pylint error

  - 2d11d65 Obtain all software from the registry
- **PR** #23554: (*jleroy*) Debian: Hostname always updated @ *2015-05-11T21:57:00Z*
  - 755bed0 Merge pull request #23554 from jleroy/debian-hostname-fix
  - 5ff749e Debian: Hostname always updated
- **PR** #23551: (*dr4Ke*) grains.append unit tests, related to #23474 @ *2015-05-11T21:54:25Z*
  - 6ec87ce Merge pull request #23551 from dr4Ke/grains.append_unit_tests
  - ebff9df fix pylint errors
  - c495404 unit tests for grains.append module function
  - 0c9a323 use MagickMock
  - c838a22 unit tests for grains.append module function
- **PR** #23474: (*dr4Ke*) Fix grains.append in nested dictionary grains #23411 @ *2015-05-11T18:00:21Z*
  - **ISSUE** #23411: (*dr4Ke*) grains.append should work at any level of a grain | refs: #23440
  - **PR** #23440: (*dr4Ke*) fix grains.append in nested dictionary grains #23411 | refs: #23474
  - e96c5c5 Merge pull request #23474 from dr4Ke/fix_grains.append_nested
  - a01a5bb grains.get, parameter delimititer, versionadded: 2014.7.6
  - b39f504 remove debugging output
  - b6e15e2 fix grains.append in nested dictionary grains #23411
- **PR** #23537: (*t0rrant*) Update changelog @ *2015-05-11T17:02:16Z*
  - ab7e1ae Merge pull request #23537 from t0rrant/patch-1
  - 8e03cc9 Update changelog
- **PR** #23538: (*cro*) Update date in LICENSE file @ *2015-05-11T15:19:25Z*
  - b79fed3 Merge pull request #23538 from cro/licupdate
  - 345efe2 Update date in LICENSE file
- **PR** #23505: (*aneeshusa*) Remove unused ssh config validator. Fixes #23159. @ *2015-05-09T13:24:15Z*
  - **ISSUE** #23159: (*aneeshusa*) Unused validator
  - a123a36 Merge pull request #23505 from aneeshusa/remove-unused-ssh-config-validator
  - 90af167 Remove unused ssh config validator. Fixes #23159.
- **PR** #23467: (*slinu3d*) Added AWS v4 signature support @ *2015-05-08T14:36:19Z*
  - **ISSUE** #20518: (*ekle*) module s3.get does not support eu-central-1 | refs: #23467
  - ca2c21a Merge pull request #23467 from slinu3d/2014.7
  - 0b4081d Fixed pylint error at line 363
  - 5be5eb5 Fixed pylink errors
  - e64f374 Fixed lint errors
  - b9d1ac4 Added AWS v4 signature support
- **PR** #23444: (*techhat*) Add create_attach_volume to nova driver @ *2015-05-07T19:51:32Z*
  - e6f9eec Merge pull request #23444 from techhat/novacreateattach

  - ebdb7ea Add create_attach_volume to nova driver
- **PR** #23460: (*s0undt3ch*) [2014.7] Update to latest stable bootstrap script v2015.05.07 @ *2015-05-07T19:10:54Z*
  - **ISSUE** #563: (*chutz*) pidfile support for minion and master daemons | refs: #23460
  - e331463 Merge pull request #23460 from s0undt3ch/hotfix/bootstrap-script-2014.7
  - edcd0c4 Update to latest stable bootstrap script v2015.05.07
- **PR** #23439: (*techhat*) Add wait_for_passwd_maxtries variable @ *2015-05-07T07:28:56Z*
  - 7a8ce1a Merge pull request #23439 from techhat/maxtries
  - 0ad3ff2 Add wait_for_passwd_maxtries variable
- **PR** #23422: (*cro*) $HOME should not be used, some shells don't set it. @ *2015-05-06T21:02:36Z*
  - 644eb75 Merge pull request #23422 from cro/gce_sh_home
  - 4ef9e6b Don't use $HOME to find user's directory, some shells don't set it
- **PR** #23425: (*basepi*) [2014.7] Fix typo in FunctionWrapper @ *2015-05-06T20:38:03Z*
  - ef17ab4 Merge pull request #23425 from basepi/functionwrapper_typo
  - c390737 Fix typo in FunctionWrapper
- **PR** #23385: (*rallytime*) Backport #23346 to 2014.7 @ *2015-05-06T20:12:29Z*
  - **PR** #23346: (*ericfode*) Allow file_map in salt-cloud to handle folders. | refs: #23385
  - 1b13ec0 Merge pull request #23385 from rallytime/bp-23346
  - 9efc13c more linting fixes
  - cf131c9 cleaned up some pylint errors
  - f981699 added logic to sftp_file and file_map to allow folder uploads using file_map
- **PR** #23414: (*jfindlay*) 2015.2 -> 2015.5 @ *2015-05-06T20:04:02Z*
  - f8c7a62 Merge pull request #23414 from jfindlay/update_branch
  - 8074d16 2015.2 -> 2015.5
- **PR** #23404: (*hvnsweeting*) saltapi cherrypy: initialize var when POST body is empty @ *2015-05-06T17:35:56Z*
  - 54b3bd4 Merge pull request #23404 from hvnsweeting/cherrypy-post-emptybody-fix
  - f85f8f9 initialize var when POST body is empty
- **PR** #23409: (*terminalmage*) Update Lithium docstrings in 2014.7 branch @ *2015-05-06T16:20:46Z*
  - 160f703 Merge pull request #23409 from terminalmage/update-lithium-docstrings-2014.7
  - bc97d01 Fix sphinx typo
  - 20006b0 Update Lithium docstrings in 2014.7 branch
- **PR** #23397: (*jfindlay*) add more flexible whitespace to locale_gen search @ *2015-05-06T03:44:11Z*
  - **ISSUE** #17245: (*tomashavlas*) localemod does not generate locale for Arch | refs: #23307 #23397
  - aa5fb0a Merge pull request #23397 from jfindlay/fix_locale_gen
  - 0941fef add more flexible whitespace to locale_gen search
- **PR** #23368: (*kaithar*) Backport #23367 to 2014.7 @ *2015-05-05T21:42:26Z*
  - **PR** #23367: (*kaithar*) Put the sed insert statement back in to the output. | refs: #23368

  - **PR** #18368: (*basepi*) Merge forward from 2014.7 to develop | refs: #23367 #23368
  - 0c76dd4 Merge pull request #23368 from kaithar/bp-23367
  - 577f419 Pylint fix
  - 8d9acd1 Put the sed insert statement back in to the output.
- **PR** #23350: (*lorengordon*) Append/prepend: search for full line @ *2015-05-05T21:42:11Z*
  - **ISSUE** #23294: (*variia*) file.replace fails to append if repl string partially available | refs: #23350
  - 3493cc1 Merge pull request #23350 from lorengordon/file.replace_assume_line
  - b60e224 Append/prepend: search for full line
- **PR** #23341: (*cachedout*) Fix syndic pid and logfile path @ *2015-05-05T21:29:10Z*
  - **ISSUE** #23026: (*adelcast*) Incorrect salt-syndic logfile and pidfile locations | refs: #23341
  - 7be5c48 Merge pull request #23341 from cachedout/issue_23026
  - e98e65e Fix tests
  - 6011b43 Fix syndic pid and logfile path
- **PR** #23272: (*basepi*) [2014.7] Allow salt-ssh minion config overrides via master config and roster | refs: #23347 @ **
  - **ISSUE** #19114: (*pykler*) salt-ssh and gpg pillar renderer | refs: #23188 #23272 #23347
  - **PR** #23188: (*basepi*) [2014.7] Work around bug in salt-ssh in config.get for gpg renderer | refs: #23272
  - ea61abf Merge pull request #23272 from basepi/salt-ssh.minion.config.19114
  - c223309 Add versionadded
  - be7407f Lint
  - c2c3375 Missing comma
  - 8e3e8e0 Pass the minion_opts through the FunctionWrapper
  - cb69cd0 Match the master config template in the master config reference
  - 87fc316 Add Salt-SSH section to master config template
  - 91dd9dc Add ssh_minion_opts to master config ref
  - c273ea1 Add minion config to salt-ssh doc
  - a0b6b76 Add minion_opts to roster docs
  - 5212c35 Accept minion_opts from the target information
  - e2099b6 Process *ssh_minion_opts* from master config
  - 3b64214 Revert ``Work around bug in salt-ssh in config.get for gpg renderer''
  - 494953a Remove the strip (embracing multi-line YAML dump)
  - fe87f0f Dump multi-line yaml into the SHIM
  - b751a72 Inject local minion config into shim if available
- **PR** #23347: (*basepi*) [2014.7] Salt-SSH Backport FunctionWrapper.__contains__ @ *2015-05-05T14:13:21Z*
  - **ISSUE** #19114: (*pykler*) salt-ssh and gpg pillar renderer | refs: #23188 #23272 #23347
  - **PR** #23272: (*basepi*) [2014.7] Allow salt-ssh minion config overrides via master config and roster | refs: #23347

  - **PR** #23188: (*basepi*) [2014.7] Work around bug in salt-ssh in config.get for gpg renderer | refs: #23272
  - 4f760dd Merge pull request #23347 from basepi/salt-ssh.functionwrapper.contains.19114
  - 30595e3 Backport FunctionWrapper.__contains__
- **PR** #23344: (*cachedout*) Explicitly set file_client on master @ *2015-05-04T23:21:48Z*
  - **ISSUE** #22742: (*hvnsweeting*) salt-master says: ``This master address: `salt' was previously resolvable but now fails to resolve!'' | refs: #23344
  - 02658b1 Merge pull request #23344 from cachedout/issue_22742
  - 5adc96c Explicitly set file_client on master
- **PR** #23318: (*cellscape*) Honor seed argument in LXC container initializaton @ *2015-05-04T20:58:12Z*
  - **PR** #23311: (*cellscape*) Fix new container initialization in LXC runner | refs: #23318
  - ba7605d Merge pull request #23318 from cellscape/honor-seed-argument
  - 228b1be Honor seed argument in LXC container initializaton
- **PR** #23307: (*jfindlay*) check for /etc/locale.gen @ *2015-05-04T20:56:32Z*
  - **ISSUE** #17245: (*tomashavlas*) localemod does not generate locale for Arch | refs: #23307 #23397
  - 4ac4509 Merge pull request #23307 from jfindlay/fix_locale_gen
  - 101199a check for /etc/locale.gen
- **PR** #23324: (*s0undt3ch*) [2014.7] Update to the latest stable release of the bootstrap script v2015.05.04 @ *2015-05-04T16:28:30Z*
  - **ISSUE** #580: (*thatch45*) recursive watch not being caught | refs: #23324
  - **ISSUE** #552: (*jhutchins*) Support require and watch under the same state dec | refs: #23324
  - **PR** #589: (*epoelke*) add --quiet and --outfile options to saltkey | refs: #23324
  - **PR** #567: (*bastichelaar*) Added upstart module | refs: #23324
  - **PR** #560: (*UtahDave*) The runas feature that was added in 93423aa2e5e4b7de6452090b0039560d2b13... | refs: #23324
  - **PR** #504: (*SEJeff*) File state goodies | refs: #23324
  - f790f42 Merge pull request #23324 from s0undt3ch/hotfix/bootstrap-script-2014.7
  - 6643e47 Update to the latest stable release of the bootstrap script v2015.05.04
- **PR** #23329: (*cro*) Require requests to verify cert when talking to aliyun and proxmox cloud providers @ *2015-05-04T16:18:17Z*
  - 5487367 Merge pull request #23329 from cro/cloud_verify_cert
  - 860d4b7 Turn on ssl verify for requests.
- **PR** #23311: (*cellscape*) Fix new container initialization in LXC runner | refs: #23318 @ *2015-05-04T09:55:29Z*
  - ea20176 Merge pull request #23311 from cellscape/fix-salt-cloud-lxc-init
  - 76fbb34 Fix new container initialization in LXC runner
- **PR** #23298: (*chris-prince*) Fixed issue #18880 in 2014.7 branch @ *2015-05-03T15:49:41Z*
  - **ISSUE** #18880: (*johtso*) npm installed breaks when a module is missing
  - c399b8f Merge pull request #23298 from chris-prince/2014.7

  - 0fa25db Fixed issue #18880 in 2014.7 branch
- **PR** #23292: (*rallytime*) Merge #23151 with pylint fixes @ *2015-05-02T03:54:12Z*
  - **ISSUE** #23148: (*cr1st1p*) virt - error handling bogus if machine image location is wrong
  - **PR** #23151: (*cr1st1p*) Fixes #23148 | refs: #23292
  - 16ecefd Merge pull request #23292 from rallytime/merge-23151
  - 8ff852a Merge #23151 with pylint fixes
  - 8ffa12e Fixes #23148
- **PR** #23274: (*basepi*) [2014.7] Reduce salt-ssh debug log verbosity @ *2015-05-01T20:19:23Z*
  - ce24315 Merge pull request #23274 from basepi/salt-ssh.debug.verbosity
  - ecee6c6 Log stdout and stderr to trace
  - 08f54d7 Log stdout and stderr to trace as well
  - 9b9c30f Reduce salt-ssh debug log verbosity
- **PR** #23261: (*rallytime*) Fix tornado websocket event handler registration @ *2015-05-01T18:20:31Z*
  - **ISSUE** #22605: (*mavenAtHouzz*) Tornado websockets event Handlers registration are incorrect | refs: #23261
  - 7b55e43 Merge pull request #23261 from rallytime/fix-22605
  - 4950fbf Fix tornado websocket event handler registration
- **PR** #23258: (*teizz*) TCP keepalives on the ret side, Revisited. @ *2015-05-01T16:13:49Z*
  - 83ef7cb Merge pull request #23258 from teizz/ï»¿ret_keepalive_2014_7_5
  - 0b9fb6f The fixes by ï»¿cachedout which were backported into 2015_2 were missing a single parameter thus not setting up the TCP keepalive for the ZeroMQ Channel by default.
- **PR** #23241: (*techhat*) Move iptables log options after the jump @ *2015-05-01T01:31:59Z*
  - **ISSUE** #23224: (*twellspring*) iptables.append --log parameters must be after --jump LOG | refs: #23241
  - 8de3c83 Merge pull request #23241 from techhat/issue23224
  - 87f7948 Move iptables log options after the jump
- **PR** #23228: (*rallytime*) Backport #23171 to 2014.7 @ *2015-04-30T21:09:45Z*
  - **PR** #23171: (*skizunov*) Bugfix: `clean_proc_dir' is broken | refs: #23228
  - f20210e Merge pull request #23228 from rallytime/bp-23171
  - e670e99 Bugfix: `clean_proc_dir' is broken
- **PR** #23227: (*rallytime*) Backport #22808 to 2014.7 @ *2015-04-30T21:09:14Z*
  - **ISSUE** #22703: (*Xiol*) salt-ssh does not work with list matcher | refs: #22808
  - **PR** #22808: (*basepi*) [2015.2] Add list targeting to salt-ssh flat roster | refs: #23227
  - 721cc28 Merge pull request #23227 from rallytime/bp-22808
  - d208a00 Dict, not list
  - a3f529e It's already been converted to a list
  - dd57f2d Add list targeting to salt-ssh flat roster
- **PR** #22823: (*hvnsweeting*) 22822 file directory clean @ *2015-04-30T15:25:51Z*

  - 82c22af Merge pull request #22823 from hvnsweeting/22822-file-directory-clean
  - c749c27 fix lint - remove unnecessary parenthesis
  - cb3dfee refactor
  - 8924b5a refactor: use relpath instead of do it manually
  - d3060a5 refactor
  - 5759a0e bugfix: fix file.directory clean=True when it require parent dir
- **PR** #22977: (*bersace*) Fix fileserver backends __opts__ overwritten by _pillar @ *2015-04-30T15:24:56Z*
  - **ISSUE** #22941: (*bersace*) *_pillar* func breaks fileserver globals | refs: #22977 #22942
  - **PR** #22942: (*bersace*) Fix fileserver backends global overwritten by _pillar | refs: #22977
  - f6c0728 Merge pull request #22977 from bersace/fix-fileserver-backends-pillar-side-effect
  - 5f451f6 Fix fileserver backends __opts__ overwritten by _pillar
- **PR** #23180: (*jfindlay*) fix typos from 36841bdd in masterapi.py @ *2015-04-30T15:22:41Z*
  - **ISSUE** #23166: (*claudiupopescu*) ``Error in function _minion_event'' resulting in modules not loaded | refs: #23180
  - 34206f7 Merge pull request #23180 from jfindlay/remote_event
  - 72066e1 fix typos from 36841bdd in masterapi.py
- **PR** #23176: (*jfindlay*) copy standard cmd.run* kwargs into cmd.run_chroot @ *2015-04-30T15:22:12Z*
  - **ISSUE** #23153: (*cr1st1p*) cmdmod : run_chroot - broken in 2014.7.5 - missing kwargs | refs: #23176
  - b6b8216 Merge pull request #23176 from jfindlay/run_chroot
  - 7dc3417 copy standard cmd.run* kwargs into cmd.run_chroot
- **PR** #23193: (*joejulian*) supervisord.mod_watch should accept sfun @ *2015-04-30T04:34:21Z*
  - **ISSUE** #23192: (*joejulian*) supervisord mod_watch does not accept sfun | refs: #23193
  - effacbe Merge pull request #23193 from joejulian/2014.7_supervisord_accept_sfun
  - efb59f9 supervisord.mod_watch should accept sfun
- **PR** #23188: (*basepi*) [2014.7] Work around bug in salt-ssh in config.get for gpg renderer | refs: #23272 @ *2015-04-30T04:34:10Z*
  - **ISSUE** #19114: (*pykler*) salt-ssh and gpg pillar renderer | refs: #23188 #23272 #23347
  - 72fe88e Merge pull request #23188 from basepi/salt-ssh.function.wrapper.gpg.19114
  - d73979e Work around bug in salt-ssh in config.get for gpg renderer
- **PR** #23154: (*cachedout*) Re-establish channel on interruption in fileclient @ *2015-04-29T16:18:59Z*
  - **ISSUE** #21480: (*msciciel*) TypeError: string indices must be integers, not str | refs: #23154
  - 168508e Merge pull request #23154 from cachedout/refresh_channel
  - 9f8dd80 Re-establish channel on interruption in fileclient
- **PR** #23146: (*rallytime*) Backport #20779 to 2014.7 @ *2015-04-28T20:45:06Z*
  - **ISSUE** #20647: (*ryan-lane*) file.serialize fails to serialize due to ordered dicts | refs: #20779
  - **PR** #20779: (*cachedout*) Use declared yaml options | refs: #23146
  - 3b53e04 Merge pull request #23146 from rallytime/bp-20779

  - ffd1849 compare OrderedDicts in serializer unit test
  - a221706 Just change serialize
  - a111798 Use declared yaml options
- **PR** #23145: (*rallytime*) Backport #23089 to 2014.7 @ *2015-04-28T20:44:56Z*
  - **PR** #23089: (*cachedout*) Stringify version number before lstrip | refs: #23145
  - 8bb4664 Merge pull request #23145 from rallytime/bp-23089
  - 93c41af Stringify version number before lstrip
- **PR** #23144: (*rallytime*) Backport #23124 to 2014.7 @ *2015-04-28T20:44:46Z*
  - **ISSUE** #16188: (*drawks*) salt.modules.parted has various functions with bogus input validation. | refs: #23124
  - **PR** #23124: (*ether42*) fix parsing the output of parted in parted.list_() | refs: #23144
  - c85d36f Merge pull request #23144 from rallytime/bp-23124-2014-7
  - 6b64da7 fix parsing the output of parted
- **PR** #23120: (*terminalmage*) Don't run os.path.relpath() if repo doesn't have a ``root'' param set @ *2015-04-28T15:46:54Z*
  - a27b158 Merge pull request #23120 from terminalmage/fix-gitfs-relpath
  - 1860fff Don't run os.path.relpath() if repo doesn't have a ``root'' param set
- **PR** #23132: (*clinta*) Backport b27c176 @ *2015-04-28T15:00:30Z*
  - fcba607 Merge pull request #23132 from clinta/patch-2
  - a824d72 Backport b27c176
- **PR** #23114: (*rallytime*) Adjust ZeroMQ 4 docs to reflect changes to Ubuntu 12 packages @ *2015-04-28T03:59:24Z*
  - **ISSUE** #18476: (*Auha*) Upgrading salt on my master caused dependency issues | refs: #23114 #18610
  - **PR** #18610: (*rallytime*) Make ZMQ 4 installation docs for ubuntu more clear | refs: #23114
  - b0f4b28 Merge pull request #23114 from rallytime/remove_ubuntu_zmq4_docs
  - f6cc7c8 Adjust ZeroMQ 4 docs to reflect changes to Ubuntu 12 packages
- **PR** #23108: (*rallytime*) Backport #23097 to 2014.7 @ *2015-04-28T03:58:05Z*
  - **ISSUE** #23085: (*xenophonf*) Use ``s3fs'' (not ``s3'') in fileserver_roots | refs: #23097
  - **PR** #23097: (*rallytime*) Change s3 to s3fs in fileserver_roots docs example | refs: #23108
  - 399857f Merge pull request #23108 from rallytime/bp-23097
  - fa88984 Change s3 to s3fs in fileserver_roots docs example
- **PR** #23112: (*basepi*) [2014.7] Backport #22199 to fix mysql returner save_load errors @ *2015-04-28T03:55:44Z*
  - **ISSUE** #22171: (*basepi*) We should only call returner.save_load once per jid | refs: #22199
  - **PR** #22199: (*basepi*) [2015.2] Put a bandaid on the save_load duplicate issue (mysql returner) | refs: #23112
  - 5541537 Merge pull request #23112 from basepi/mysql_returner_save_load
  - 0127012 Put a bandaid on the save_load duplicate issue
- **PR** #23113: (*rallytime*) Revert ``Backport #22895 to 2014.7'' @ *2015-04-28T03:27:29Z*
  - **PR** #22925: (*rallytime*) Backport #22895 to 2014.7 | refs: #23113

  - **PR** #22895: (*aletourneau*) pam_tally counter was not reset to 0 after a successful login | refs: #22925
  - dfe2066 Merge pull request #23113 from saltstack/revert-22925-bp-22895
  - b957ea8 Revert ``Backport #22895 to 2014.7''
- **PR** #23094: (*terminalmage*) pygit2: disable cleaning of stale refs for authenticated remotes @ *2015-04-27T20:51:28Z*
  - **ISSUE** #23013: (*markusr815*) gitfs regression with authenticated repos | refs: #23094
  - 21515f3 Merge pull request #23094 from terminalmage/issue23013
  - aaf7b04 pygit2: disable cleaning of stale refs for authenticated remotes
- **PR** #23048: (*jfindlay*) py-2.6 compat for utils/boto.py ElementTree exception @ *2015-04-25T16:56:45Z*
  - d45aa21 Merge pull request #23048 from jfindlay/ET_error
  - 64c42cc py-2.6 compat for utils/boto.py ElementTree exception
- **PR** #23025: (*jfindlay*) catch exceptions on bad system locales/encodings @ *2015-04-25T16:56:30Z*
  - **ISSUE** #22981: (*syphernl*) Locale state throwing traceback when generating not (yet) existing locale | refs: #23025
  - d25a5c1 Merge pull request #23025 from jfindlay/fix_sys_locale
  - 9c4d62b catch exceptions on bad system locales/encodings
- **PR** #22932: (*hvnsweeting*) bugfix: also manipulate dir_mode when source not defined @ *2015-04-25T16:54:58Z*
  - 5e44b59 Merge pull request #22932 from hvnsweeting/file-append-bugfix
  - 3f368de do not use assert in execution module
  - 9d4fd4a bugfix: also manipulate dir_mode when source not defined
- **PR** #23055: (*jfindlay*) prevent ps module errors on accessing dead procs @ *2015-04-24T22:39:49Z*
  - **ISSUE** #23021: (*ether42*) ps.pgrep raises NoSuchProcess | refs: #23055
  - c2416a4 Merge pull request #23055 from jfindlay/fix_ps
  - c2dc7ad prevent ps module errors on accessing dead procs
- **PR** #23031: (*jfindlay*) convert exception e.message to just e @ *2015-04-24T18:38:13Z*
  - bfd9158 Merge pull request #23031 from jfindlay/exception
  - 856bad1 convert exception e.message to just e
- **PR** #23015: (*hvnsweeting*) if status of service is stop, there is not an error with it @ *2015-04-24T14:35:10Z*
  - 7747f33 Merge pull request #23015 from hvnsweeting/set-non-error-lvl-for-service-status-log
  - 92ea163 if status of service is stop, there is not an error with it
- **PR** #23000: (*jfindlay*) set systemd service killMode to process for minion @ *2015-04-24T03:42:39Z*
  - **ISSUE** #22993: (*jetpak*) salt-minion restart causes all spawned daemons to die on centos7 (systemd) | refs: #23000
  - 2e09789 Merge pull request #23000 from jfindlay/systemd_kill
  - 3d575e2 set systemd service killMode to process for minion
- **PR** #22999: (*jtand*) Added retry_dns to minion doc. @ *2015-04-24T03:30:24Z*

  - **ISSUE** #22707: (*arthurlogilab*) retry_dns of master configuration is missing from the documentation | refs: #22999
  - b5c059a Merge pull request #22999 from jtand/fix_22707
  - 8486e17 Added retry_dns to minion doc.
- **PR** #22990: (*techhat*) Use the proper cloud conf variable @ *2015-04-23T17:48:07Z*
  - 27dc877 Merge pull request #22990 from techhat/2014.7
  - d33bcbc Use the proper cloud conf variable
- **PR** #22976: (*multani*) Improve state_output documentation @ *2015-04-23T12:24:22Z*
  - 13dff65 Merge pull request #22976 from multani/fix/state-output-doc
  - 19efd41 Improve state_output documentation
- **PR** #22955: (*terminalmage*) Fix regression introduced yesterday in dockerio module @ *2015-04-22T18:56:39Z*
  - 89fa185 Merge pull request #22955 from terminalmage/dockerio-run-fix
  - b4472ad Fix regression introduced yesterday in dockerio module
- **PR** #22954: (*rallytime*) Backport #22909 to 2014.7 @ *2015-04-22T18:56:20Z*
  - **PR** #22909: (*mguegan*) Fix compatibility with pkgin > 0.7 | refs: #22954
  - 46ef227 Merge pull request #22954 from rallytime/bp-22909
  - 70c1cd3 Fix compatibility with pkgin > 0.7
- **PR** #22856: (*jfindlay*) increase timeout and decrease tries for route53 records @ *2015-04-22T16:47:01Z*
  - **ISSUE** #18720: (*Reiner030*) timeouts when setting Route53 records | refs: #22856
  - c9ae593 Merge pull request #22856 from jfindlay/route53_timeout
  - ba4a786 add route53 record sync wait, default=False
  - ea2fd50 increase timeout and tries for route53 records
- **PR** #22946: (*s0undt3ch*) Test with a more recent pip version to avoid a traceback @ *2015-04-22T16:25:17Z*
  - a178d44 Merge pull request #22946 from s0undt3ch/2014.7
  - bc87749 Test with a more recent pip version to avoid a traceback
- **PR** #22945: (*garethgreenaway*) Fixes to scheduler @ *2015-04-22T16:25:00Z*
  - **ISSUE** #22571: (*BoomerB*) same error message as on issue #18504 | refs: #22945
  - de339be Merge pull request #22945 from garethgreenaway/22571_2014_7_schedule_pillar_refresh_seconds_exceptions
  - bfa6d25 Fixing a reported issue when using a scheduled job from pillar with splay. _seconds element that acted as a backup of the actual seconds was being removed when pillar was refreshed and causing exceptions. This fix moves some splay related code out of the if else condition so it's checked whether the job is in the job queue or not.
- **PR** #22887: (*hvnsweeting*) fix #18843 @ *2015-04-22T15:47:05Z*
  - **ISSUE** #18843: (*calvinhp*) State user.present will fail to create home if user exists and homedir doesn't
  - 12d2b91 Merge pull request #22887 from hvnsweeting/18843-fix-user-present-home
  - 7fe7b08 run user.chhome once to avoid any side-effect when run it twice
  - 19de995 clarify the usage of home arg

  - d6dc09a enhance doc, as usermod on ubuntu 12.04 will not CREATE home
  - 0ce4d7f refactor: force to use boolean
  - 849d19e log debug the creating dir process
  - c4e95b9 fix #18843: usermod won't create a dir if old home does not exist
- **PR** #22930: (*jfindlay*) localemod.gen_locale now always returns a boolean @ *2015-04-22T15:37:39Z*
  - **ISSUE** #21140: (*holms*) locale.present state executed successfully, although originally fails | refs: #22930 #22829
  - **ISSUE** #2417: (*ffa*) Module standards | refs: #22829
  - **PR** #22829: (*F30*) Always return a boolean in gen_locale() | refs: #22930
  - b7de7bd Merge pull request #22930 from jfindlay/localegen_bool
  - 399399f localemod.gen_locale now always returns a boolean
- **PR** #22933: (*hvnsweeting*) add test for #18843 @ *2015-04-22T15:27:18Z*
  - **ISSUE** #18843: (*calvinhp*) State user.present will fail to create home if user exists and homedir doesn't
  - 11bcf14 Merge pull request #22933 from hvnsweeting/18843-test
  - b13db32 add test for #18843
- **PR** #22925: (*rallytime*) Backport #22895 to 2014.7 | refs: #23113 @ *2015-04-22T02:30:26Z*
  - **PR** #22895: (*aletourneau*) pam_tally counter was not reset to 0 after a successful login | refs: #22925
  - 6890752 Merge pull request #22925 from rallytime/bp-22895
  - 3852d96 Pylint fix
  - 90f7829 Fixed pylint issues
  - 5ebf159 Cleaned up pull request
  - a08ac47 pam_tally counter was not reset to 0 after a successful login
- **PR** #22914: (*cachedout*) Call proper returner function in jobs.list_jobs @ *2015-04-22T00:49:01Z*
  - **ISSUE** #22790: (*whiteinge*) jobs.list_jobs runner tracebacks on `missing' argument | refs: #22914
  - eca37eb Merge pull request #22914 from cachedout/issue_22790
  - d828d6f Call proper returner function in jobs.list_jobs
- **PR** #22918: (*JaseFace*) Add a note to the git_pillar docs stating that GitPython is the only currently supported provider @ *2015-04-22T00:48:26Z*
  - 44f3409 Merge pull request #22918 from JaseFace/git-pillar-provider-doc-note
  - 0aee5c2 Add a note to the git_pillar docs stating that GitPython is the only currently supported provider
- **PR** #22907: (*techhat*) Properly merge cloud configs to create profiles @ *2015-04-21T22:02:44Z*
  - 31c461f Merge pull request #22907 from techhat/cloudconfig
  - 3bf4e66 Properly merge cloud configs to create profiles
- **PR** #22894: (*0xf10e*) Fix issue #22782 @ *2015-04-21T18:55:18Z*
  - f093975 Merge pull request #22894 from 0xf10e/2014.7
  - 58fa24c Clarify doc on kwarg `roles' for user_present().
  - f0ae2eb Improve readability by renaming tenant_role

- **PR** #22902: (*rallytime*) Change state example to use proper kwarg @ *2015-04-21T18:50:47Z*
  - **ISSUE** #12003: (*MarkusMuellerAU*) [state.dockerio] docker.run TypeError: run() argument after ** must be a mapping, not str | refs: #22902
  - c802ba7 Merge pull request #22902 from rallytime/docker_doc_fix
  - 8f70346 Change state example to use proper kwarg
- **PR** #22898: (*terminalmage*) dockerio: better error message for native exec driver @ *2015-04-21T18:02:58Z*
  - 81771a7 Merge pull request #22898 from terminalmage/issue12003
  - c375309 dockerio: better error message for native exec driver
- **PR** #22897: (*rallytime*) Add param documentation for file.replace state @ *2015-04-21T17:31:04Z*
  - **ISSUE** #22825: (*paolodina*) Issue using file.replace in state file | refs: #22897
  - e2ec4ec Merge pull request #22897 from rallytime/fix-22825
  - 9c51630 Add param documentation for file.replace state
- **PR** #22850: (*bersace*) Fix pillar and salt fileserver mixed @ *2015-04-21T17:04:33Z*
  - **ISSUE** #22844: (*bersace*) LocalClient file cache confuse pillar and state files | refs: #22850
  - fd53889 Merge pull request #22850 from bersace/fix-pillar-salt-mixed
  - 31b98e7 Initialize state file client after pillar loading
  - f6bebb7 Use saltenv
- **PR** #22818: (*twangboy*) Added documentation regarding pip in windows @ *2015-04-21T03:58:59Z*
  - 1380fec Merge pull request #22818 from twangboy/upd_pip_docs
  - cb999c7 Update pip.py
  - 3cc5c97 Added documentation regarding pip in windows
- **PR** #22872: (*rallytime*) Prevent stacktrace on os.path.exists in hosts module @ *2015-04-21T02:54:40Z*
  - b2bf17f Merge pull request #22872 from rallytime/fix_hosts_stacktrace
  - c88a1ea Prevent stacktrace on os.path.exists in hosts module
- **PR** #22853: (*s0undt3ch*) Don't assume package installation order. @ *2015-04-21T02:42:41Z*
  - 03af523 Merge pull request #22853 from s0undt3ch/2014.7
  - b62df62 Don't assume package installation order.
- **PR** #22877: (*s0undt3ch*) Don't fail on *make clean* just because the directory does not exist @ *2015-04-21T02:40:47Z*
  - 9211e36 Merge pull request #22877 from s0undt3ch/hotfix/clean-docs-fix
  - 95d6887 Don't fail on *make clean* just because the directory does not exist
- **PR** #22873: (*thatch45*) Type check the version since it will often be numeric @ *2015-04-21T02:38:11Z*
  - 5bdbd08 Merge pull request #22873 from thatch45/type_check
  - 53b8376 Type check the version since it will often be numeric
- **PR** #22870: (*twangboy*) Added ability to send a version with a space in it @ *2015-04-20T23:18:28Z*
  - c965b0a Merge pull request #22870 from twangboy/fix_installer_again
  - 3f180cf Added ability to send a version with a space in it

- **PR** #22863: (*rallytime*) Backport #20974 to 2014.7 @ *2015-04-20T19:29:37Z*
  - **PR** #20974: (*JohannesEbke*) Fix expr_match usage in salt.utils.check_whitelist_blacklist | refs: #22863
  - 2973eb1 Merge pull request #22863 from rallytime/bp-20974
  - 14913a4 Fix expr_match usage in salt.utils.check_whitelist_blacklist
- **PR** #22578: (*hvnsweeting*) gracefully handle when salt-minion cannot decrypt key @ *2015-04-20T15:24:45Z*
  - c45b92b Merge pull request #22578 from hvnsweeting/2014-7-fix-compile-pillar
  - f75b24a gracefully handle when salt-minion cannot decrypt key
- **PR** #22800: (*terminalmage*) Improve error logging for pygit2 SSH-based remotes @ *2015-04-18T17:18:55Z*
  - **ISSUE** #21979: (*yrdevops*) gitfs: error message not descriptive enough when libgit2 was compiled without libssh2 | refs: #22800
  - 900c7a5 Merge pull request #22800 from terminalmage/issue21979
  - 8f1c008 Clarify that for pygit2, receiving 0 objects means repo is up-to-date
  - 98885f7 Add information about libssh2 requirement for pygit2 ssh auth
  - 09468d2 Fix incorrect log message
  - 2093bf8 Adjust loglevels for gitfs errors
  - 9d394df Improve error logging for pygit2 SSH-based remotes
- **PR** #22813: (*twangboy*) Updated instructions for building salt @ *2015-04-18T04:10:07Z*
  - e99f2fd Merge pull request #22813 from twangboy/win_doc_fix
  - adc421a Fixed some formatting issues
  - 8901b3b Updated instructions for building salt
- **PR** #22810: (*basepi*) [2014.7] More msgpack gating for salt-ssh @ *2015-04-17T22:28:24Z*
  - **ISSUE** #22708: (*Bilge*) salt-ssh file.accumulated error: NameError: global name `msgpack' is not defined | refs: #22810
  - fe1de89 Merge pull request #22810 from basepi/salt-ssh.more.msgpack.gating
  - d4da8e6 Gate msgpack in salt/modules/saltutil.py
  - 02303b2 Gate msgpack in salt/modules/data.py
  - d7e8741 Gate salt.states.file.py msgpack
- **PR** #22803: (*rallytime*) Allow map file to work with softlayer @ *2015-04-17T20:34:42Z*
  - **ISSUE** #17144: (*xpender*) salt-cloud -m fails with softlayer | refs: #22803
  - 11df71e Merge pull request #22803 from rallytime/fix-17144
  - ce88b6a Allow map file to work with softlayer
- **PR** #22807: (*rallytime*) Add 2014.7.5 links to windows installation docs @ *2015-04-17T20:32:13Z*
  - cd43a95 Merge pull request #22807 from rallytime/windows_docs_update
  - 5931a58 Replace all 4s with 5s
  - eadaead Add 2014.7.5 links to windows installation docs
- **PR** #22795: (*rallytime*) Added release note for 2014.7.5 release @ *2015-04-17T18:05:36Z*
  - 0b295e2 Merge pull request #22795 from rallytime/release_notes

  - fde1fee Remove extra line
  - b19b95d Added release note for 2014.7.5 release
- **PR** #22759: (*twangboy*) Final edits to the batch files for running salt @ *2015-04-17T04:31:15Z*
  - **ISSUE** #22740: (*lorengordon*) New Windows installer assumes salt is installed to the current directory | refs: #22759
  - **PR** #22754: (*twangboy*) Removed redundant \ and " | refs: #22759
  - 3c91459 Merge pull request #22759 from twangboy/fix_bat_one_last_time
  - 075f82e Final edits to the batch files for running salt
- **PR** #22760: (*thatch45*) Fix issues with the syndic @ *2015-04-17T04:30:48Z*
  - 20d3f2b Merge pull request #22760 from thatch45/syndic_fix
  - e2db624 Fix issues with the syndic not resolving the master when the interface is set
- **PR** #22762: (*twangboy*) Fixed version not showing in Add/Remove Programs @ *2015-04-17T04:29:46Z*
  - 54c4584 Merge pull request #22762 from twangboy/fix_installer
  - 4d25af8 Fixed version not showing in Add/Remove Programs

20.2.54 Salt 2014.7.8 Release Notes

Changes for v2014.7.7..v2014.7.8

Extended changelog courtesy of Todd Stansell (https://github.com/tjstansell/salt-changelogs):

Generated at: 2016-03-11T21:18:48Z

Statistics:

- Total Merges: **7**
- Total Issue references: **3**
- Total PR references: **10**

Changes:

- **PR** #28839: (*cachedout*) Revert #28740 @ *2015-11-12T22:54:28Z*
  - **PR** #28740: (*MasterNayru*) Add missing S3 module import | refs: #28777
  - 4b8bdd0 Merge pull request #28839 from cachedout/revert_28740
  - 215b26c Revert #28740
- **PR** #28777: (*rallytime*) Back-port #28740 to 2014.7 @ *2015-11-11T18:00:00Z*
  - **PR** #28740: (*MasterNayru*) Add missing S3 module import | refs: #28777
  - 76e69b4 Merge pull request #28777 from rallytime/bp-28740-2014.7
  - da5fac2 Back-port #28740 to 2014.7
- **PR** #28716: (*rallytime*) Back-port #28705 to 2014.7 @ *2015-11-10T16:15:03Z*
  - **PR** #28705: (*cachedout*) Account for new headers class in tornado 4.3 | refs: #28716
  - 45c73eb Merge pull request #28716 from rallytime/bp-28705
  - 32e7bd3 Account for new headers class in tornado 4.3

- **PR** #28717: (*cachedout*) Add note about recommended umask @ *2015-11-09T23:26:20Z*
  - **ISSUE** #28199: (*felskrone*) Non-standard umasks might break the master | refs: #28717
  - f4fe921 Merge pull request #28717 from cachedout/umask_note
  - 1874300 Add note about recommended umask
- **PR** #28461: (*cachedout*) Wrap all cache calls in state.sls in correct umask @ *2015-11-02T17:11:02Z*
  - **ISSUE** #28455: (*zmalone*) highstate.cache is world readable, and contains secrets | refs: #28461
  - 4bf56ca Merge pull request #28461 from cachedout/issue_28455
  - 097838e Wrap all cache calls in state.sls in correct umask
- **PR** #28407: (*DmitryKuzmenko*) Don't request creds if auth with key. @ *2015-10-29T16:12:30Z*
  - **ISSUE** #24910: (*bocig*) -T, --make-token flag does NOT work- LDAP Groups | refs: #28407
  - f3e61db Merge pull request #28407 from DSRCompany/issues/24910_token_auth_fix_2014
  - b7b5bec Don't request creds if auth with key.
- **PR** #27390: (*JaseFace*) Ensure we pass on the enable setting if present, or use the default of True if not in build_schedule_item() @ *2015-10-05T18:09:33Z*
  - d284eb1 Merge pull request #27390 from JaseFace/schedule-missing-enabled
  - 563db71 Ensure we pass on the enable setting if present, or use the default of True if not in build_schedule_item() Prior to this, when schedule.present compares the existing schedule to the one crafted by this function, enabled will actually be removed at each run. schedule.present sees a modification needs to be made, and invokes schedule.modify, which does so with enabled: True, creating and endless loop of an `enabled' removal and addition.

20.2.55 Salt 2014.7.9 Release Notes

Changes for v2014.7.8..v2014.7.9

Extended changelog courtesy of Todd Stansell (https://github.com/tjstansell/salt-changelogs):

Generated at: 2016-03-11T20:58:58Z

Statistics:

- Total Merges: **3**
- Total Issue references: **1**
- Total PR references: **3**

Changes:

- **PR** #31826: (*gtmanfred*) Remove ability of authenticating user to specify pam service @ *2016-03-11T20:41:01Z*
  - c5e7c03 Merge pull request #31826 from gtmanfred/2014.7
  - d73f70e Remove ability of authenticating user to specify pam service
- **PR** #29392: (*jacobhammons*) updated version number to not reference a specific build from the lat... @ *2015-12-03T15:54:31Z*
  - 85aa70a Merge pull request #29392 from jacobhammons/2014.7
  - d7f0db1 updated version number to not reference a specific build from the latest branch

- **PR** #29296: (*douardda*) Use process KillMode on Debian systems also @ *2015-12-01T16:00:16Z*
  - **ISSUE** #29295: (*douardda*) systemd's service file should use the `process' KillMode option on Debian also | refs: #29296
  - d2fb210 Merge pull request #29296 from douardda/patch-3
  - d288539 Use process KillMode on Debian systems also

20.2.56 Salt 2014.1.0 Release Notes - Codename Hydrogen

Note: Due to a change in master to minion communication, 2014.1.0 minions are not compatible with older-version masters. Please upgrade masters first. More info on backwards-compatibility policy *here*, under the ``Upgrading Salt'' subheading.

Note: A change in the grammar in the state compiler makes `module.run` in requisites illegal syntax. Its use is replaced simply with the word `module`. In other words you will need to change requisites like this:

```
require:
    module.run: some_module_name
```

to:

```
require:
    module: some_module_name
```

This is a breaking change. We apologize for the inconvenience, we needed to do this to remove some ambiguity in parsing requisites.

release 2014-02-24

The 2014.1.0 release of Salt is a major release which not only increases stability but also brings new capabilities in virtualization, cloud integration, and more. This release brings a great focus on the expansion of testing making roughly double the coverage in the Salt tests, and comes with many new features.

2014.1.0 is the first release to follow the new date-based release naming system. See the version numbers page for more details.

Major Features

Salt Cloud Merged into Salt

Salt Cloud is a tool for provisioning salted minions across various cloud providers. Prior to this release, Salt Cloud was a separate project but this marks its full integration with the Salt distribution. A Getting Started guide and additional documentation for Salt Cloud can be found *here*:

Google Compute Engine

Alongside Salt Cloud comes new support for the Google Compute Engine. Salt Stack can now deploy and control GCE virtual machines and the application stacks that they run.

For more information on Salt Stack and GCE, please see this blog post.

Documentation for Salt and GCE can be found *here*.

Salt Virt

Salt Virt is a cloud controller that supports virtual machine deployment, inspection, migration, and integration with many aspects of Salt.

Salt Virt has undergone a major overhaul with this release and now supports many more features and includes a number of critical improvements.

Docker Integration

Salt now ships with `states` and an `execution module` to manage Docker containers.

Substantial Testing Expansion

Salt continues to increase its unit/regression test coverage. This release includes over 300 new tests.

BSD Package Management

BSD package management has been entirely rewritten. FreeBSD 9 and older now default to using pkg_add, while FreeBSD 10 and newer will use pkgng. FreeBSD 9 can be forced to use pkgng, however, by specifying the following option in the minion config file:

```
providers:
  pkg: pkgng
```

In addition, support for installing software from the ports tree has been added. See the documentation for the ports `state` and `execution module` for more information.

Network Management for Debian/Ubuntu

Initial support for management of network interfaces on Debian-based distros has been added. See the documentation for the `network state` and the `debian_ip` for more information.

IPv6 Support for iptables State/Module

The iptables `state` and `module` now have IPv6 support. A new parameter `family` has been added to the states and execution functions, to distinguish between IPv4 and IPv6. The default value for this parameter is `ipv4`, specifying `ipv6` will use ip6tables to manage firewall rules.

GitFS Improvements

Several performance improvements have been made to the `Git fileserver backend`. Additionally, file states can now use any any SHA1 commit hash as a fileserver environment:

```
/etc/httpd/httpd.conf:
  file.managed:
    - source: salt://webserver/files/httpd.conf
    - saltenv: 45af879
```

This applies to the functions in the *cp module* as well:

```
salt '*' cp.get_file salt://readme.txt /tmp/readme.txt saltenv=45af879
```

MinionFS

This new fileserver backend allows files which have been pushed from the minion to the master (using *cp.push*) to be served up from the salt fileserver. The path for these files takes the following format:

```
salt://minion-id/path/to/file
```

`minion-id` is the id of the ``source'' minion, the one from which the files were pushed to the master. `/path/to/file` is the full path of the file.

The *MinionFS Walkthrough* contains a more thorough example of how to use this backend.

saltenv

To distinguish between fileserver environments and execution functions which deal with environment variables, fileserver environments are now specified using the `saltenv` parameter. `env` will continue to work, but is deprecated and will be removed in a future release.

Grains Caching

A caching layer has been added to the Grains system, which can help speed up minion startup. Disabled by default, it can be enabled by setting the minion config option `grains_cache`:

```
grains_cache: True

# Seconds before grains cache is considered to be stale.
grains_cache_expiration: 300
```

If set to `True`, the grains loader will read from/write to a msgpack-serialized file containing the grains data.

Additional command-line parameters have been added to salt-call, mainly for testing purposes:

- `--skip-grains` will completely bypass the grains loader when salt-call is invoked.
- `--refresh-grains-cache` will force the grains loader to bypass the grains cache and refresh the grains, writing a new grains cache file.

Improved Command Logging Control

When using the *cmd module*, either on the CLI or when developing Salt execution modules, a new keyword argument `output_loglevel` allows for greater control over how (or even if) the command and its output are logged. For example:

```
salt '*' cmd.run 'tail /var/log/messages' output_loglevel=debug
```

The package management modules (`apt`, `yumpkg`, etc.) have been updated to log the copious output generated from these commands at loglevel `debug`.

Note: To keep a command from being logged, `output_loglevel=quiet` can be used.

Prior to this release, this could be done using `quiet=True`. This argument is still supported, but will be removed in a future Salt release.

PagerDuty Support

Initial support for firing events via PagerDuty has been added. See the documentation for the *`pagerduty`* module.

Virtual Terminal

Sometimes the subprocess module is not good enough, and, in fact, not even `askpass` is. This virtual terminal is still in it's infant childhood, needs quite some love, and was originally created to replace `askpass`, but, while developing it, it immediately proved that it could do so much more. It's currently used by salt-cloud when bootstrapping salt on clouds which require the use of a password.

Proxy Minions

Initial basic support for Proxy Minions is in this release. Documentation can be found *here*.

Proxy minions are a developing feature in Salt that enables control of devices that cannot run a minion. Examples include network gear like switches and routers that run a proprietary OS but offer an API, or ``dumb'' devices that just don't have the horsepower or ability to handle a Python VM.

Proxy minions can be difficult to write, so a simple REST-based example proxy is included. A Python bottle-based webserver can be found at https://github.com/cro/salt-proxy-rest as an endpoint for this proxy.

This is an ALPHA-quality feature. There are a number of issues with it currently, mostly centering around process control, logging, and inability to work in a masterless configuration.

Additional Bugfixes (Release Candidate Period)

Below are many of the fixes that were implemented in salt during the release candidate phase.

- Fix mount.mounted leaving conflicting entries in fstab (issue 7079)
- Fix mysql returner serialization to use json (issue 9590)
- Fix `ZMQError: Operation cannot be accomplished in current state` errors (issue 6306)
- Rbenv and ruby improvements
- Fix quoting issues with mysql port (issue 9568)
- Update mount module/state to support multiple swap partitions (issue 9520)
- Fix `archive` state to work with `bsdtar`
- Clarify logs for minion ID caching

- Add numeric revision support to git state (issue 9718)
- Update `master_uri` with `master_ip` (issue 9694)
- Add comment to Debian `mod_repo` (issue 9923)
- Fix potential undefined loop variable in rabbitmq state (issue 8703)
- Fix for salt-virt runner to delete key on VM deletion
- Fix for `salt-run -d` to limit results to specific runner or function (issue 9975)
- Add tracebacks to jinja renderer when applicable (issue 10010)
- Fix parsing in monit module (issue 10041)
- Fix highstate output from syndic minions (issue 9732)
- Quiet logging when dealing with passwords/hashes (issue 10000)
- Fix for multiple remotes in git_pillar (issue 9932)
- Fix npm installed command (issue 10109)
- Add safeguards for utf8 errors in zcbuildout module
- Fix compound commands (issue 9746)
- Add systemd notification when master is started
- Many doc improvements

20.2.57 Salt 2014.1.1 Release Notes

release 2014-03-18

Version 2014.1.1 is a bugfix release for *2014.1.0*. The changes include:

- Various doc fixes, including up-to-date Salt Cloud installation documentation.
- Renamed state.sls runner to state.orchestrate, to reduce confusion with the *`state.sls`* execution function
- Fix various bugs in the `dig` module (issue 10367)
- Add retry for query on certain EC2 status codes (issue 10154)
- Fix various bugs in mongodb_user state module (issue 10430)
- Fix permissions on `~/.salt_token` (issue 10422)
- Add PyObjects support
- Fix launchctl module crash with missing files
- Fix *`saltutil.find_job`* for Windows (issue 10581)
- Fix OS detection for OpenSolaris (issue 10601)
- Fix broken salt-ssh key_deploy
- Add support for multiline cron comments (issue 10721)
- Fix timezone module for Arch (issue 10789)
- Fix symlink support for `file.recurse` (issue 10809)
- Fix multi-master bugs (issue 10732 and issue 10969)
- Fix file.patch to error when source file is unavailable (issue 10380)

- Fix pkg to handle packages set as `purge` in `pkg.installed` (issue 10719)
- Add `zmqversion` grain
- Fix highstate summary for masterless minions (issue 10945)
- Fix *`saltutil.find_job`* for 2014.1 masters talking to 0.17 minions (issue 11020)
- Fix *`file.recurse`* states with trailing slashes in source (issue 11002)
- Fix *`pkg states`* to allow `pkgname.x86_64` (issue 7306)
- Make *`iptables states`* set a default table for flush (issue 11037)
- Added iptables `--reject-with` after final iptables call in *`iptables states`* (issue:*10757*)
- Fix improper passing of "family" in *`iptables states`* (issue 10774)
- Fix traceback in *`iptables.insert`* states (issue 10988)
- Fix zombie processes (issue 10867 and others)
- Fix batch mode to obey `--return` settings (issue 9146)
- Fix localclient issue that was causing batch mode breakage (issue 11094, issue 10470, and others)
- Multiple salt-ssh fixes
- FreeBSD: look in /usr/local/etc/salt for configuration by default, if installed using `pip --editable`.
- Add a `skip_suggestions` parameter to pkg.installed states which allows pre-flight check to be skipped (issue 11106)
- Fixed tag-based gitfs fileserver environments regression (issue 10956)
- Yum: fix cache of available pkgs not cleared when repos are changed (issue 11001)
- Yum: fix for plugin-provided repositories (i.e. RHN/Spacewalk) (issue 11145)
- Fix regression in *`chocolatey.bootstrap`* (issue 10541)
- Fix fail on unknown target in *`jobs runner`* (issue 11151)
- Don't log errors for commands which are expected to sometimes exit with non-zero exit status (issue 11154, issue 11090)
- Fix `test=True` CLI override of config option (issue 10877)
- Log sysctl key listing at loglevel TRACE (issue 10931)

20.2.58 Salt 2014.1.10 Release Notes

release 2014-08-01

Note: Version 2014.1.9 contained a regression which caused inaccurate Salt version detection, and thus was never packaged for general release. This version contains the version detection fix, but is otherwise identical to 2014.1.9.

Version 2014.1.10 is another bugfix release for *2014.1.0*. Changes include:

- Ensure salt-ssh will not continue if permissions on a temporary directory are not correct.
- Use the bootstrap script distributed with Salt instead of relying on an external resource
- Remove unused testing code
- Ensure salt states are placed into the `.salt` directory in salt-ssh

- Use a randomized path for temporary files in a salt-cloud deployment
- Clean any stale directories to ensure a fresh copy of salt-ssh during a deployment

Salt 2014.1.10 fixes security issues documented by CVE-2014-3563: ``Insecure tmp-file creation in seed.py, salt-ssh, and salt-cloud.'' Upgrading is recommended.

20.2.59 Salt 2014.1.11 Release Notes

release 2014-08-29

Version 2014.1.11 is another bugfix release for *2014.1.0*. Changes include:

- Fix for minion_id with byte-order mark (BOM) (issue 12296)
- Fix `runas` deprecation in `at` module
- Fix trailing slash befhavior for `file.makedirs_` (issue 14019)
- Fix chocolatey path (issue 13870)
- Fix git_pillar infinite loop issues (issue 14671)
- Fix json outputter `null` case
- Fix for minion error if one of multiple masters are down (issue 14099)

20.2.60 Salt 2014.1.12 Release Notes

release 2014-10-08

Version 2014.1.12 is another bugfix release for *2014.1.0*. Changes include:

- Fix `scp_file` always failing (which broke salt-cloud) (issue 16437)
- Fix regression in pillar in masterless (issue 16210, issue 16416, issue 16428)

20.2.61 Salt 2014.1.13 Release Notes

release 2014-10-14

Version 2014.1.13 is another bugfix release for *2014.1.0*. Changes include:

- Fix `sftp_file` by checking the exit status code of scp (which broke salt-cloud) (issue 16599)

20.2.62 Salt 2014.1.2 Release Notes

release 2014-04-15

Version 2014.1.2 is another bugfix release for *2014.1.0*. The changes include:

- Fix username detection when su'ed to root on FreeBSD (issue 11628)
- Fix minionfs backend for file.recurse states
- Fix 32-bit packages of different arches than the CPU arch, on 32-bit RHEL/CentOS (issue 11822)
- Fix bug with specifying alternate home dir on user creation (FreeBSD) (issue 11790)
- Don't reload `site` module on module refresh for MacOS

- Fix regression with running execution functions in Pillar SLS (issue 11453)
- Fix some modules missing from Windows installer
- Don't log an error for yum commands that return nonzero exit status on non-failure (issue 11645)
- Fix bug in rabbitmq state (issue 8703)
- Fix missing ssh config options (issue 10604)
- Fix top.sls ordering (issue 10810 and issue 11691)
- Fix `salt-key --list all` (issue 10982)
- Fix win_servermanager install/remove function (issue 11038)
- Fix interaction with tokens when running commands as root (issue 11223)
- Fix overstate bug with `find_job` and `**kwargs` (issue 10503)
- Fix `saltenv` for `aptpkg.mod_repo` from `pkgrepo` state
- Fix environment issue causing file caching problems (issue 11189)
- Fix bug in `__parse_key` in registry state (issue 11408)
- Add minion auth retry on rejection (issue 10763)
- Fix publish_session updating the encryption key (issue 11493)
- Fix for bad `AssertionError` raised by GitPython (issue 11473)
- Fix `debian_ip` to allow disabling and enabling networking on Ubuntu (issue 11164)
- Fix potential memory leak caused by saved (and unused) events (issue 11582)
- Fix exception handling in the MySQL module (issue 11616)
- Fix environment-related error (issue 11534)
- Include `psutil` on Windows
- Add `file.replace` and `file.search` to Windows (issue 11471)
- Add additional `file` module helpers to Windows (issue 11235)
- Add `pid` to netstat output on Windows (issue 10782)
- Fix Windows not caching new versions of installers in winrepo (issue 10597)
- Fix hardcoded md5 hashing
- Fix kwargs in salt-ssh (issue 11609)
- Fix file backup timestamps (issue 11745)
- Fix stacktrace on `sys.doc` with invalid eauth (issue 11293)
- Fix `git.latest` with `test=True` (issue 11595)
- Fix `file.check_perms` hardcoded `follow_symlinks` (issue 11387)
- Fix certain `pkg` states for RHEL5/Cent5 machines (issue 11719)

20.2.63 Salt 2014.1.3 Release Notes

release 2014-04-15

Version 2014.1.3 is another bugfix release for *2014.1.0*. It was created as a hotfix for a regression found in 2014.1.2, which was not distributed. The only change made was as follows:

- Fix regression that caused `saltutil.find_job` to fail, causing premature terminations of salt CLI commands.

Changes in the not-distributed 2014.1.2, also included in 2014.1.3:

- Fix username detection when su'ed to root on FreeBSD (issue 11628)
- Fix minionfs backend for file.recurse states
- Fix 32-bit packages of different arches than the CPU arch, on 32-bit RHEL/CentOS (issue 11822)
- Fix bug with specifying alternate home dir on user creation (FreeBSD) (issue 11790)
- Don't reload `site` module on module refresh for MacOS
- Fix regression with running execution functions in Pillar SLS (issue 11453)
- Fix some modules missing from Windows installer
- Don't log an error for yum commands that return nonzero exit status on non-failure (issue 11645)
- Fix bug in rabbitmq state (issue 8703)
- Fix missing ssh config options (issue 10604)
- Fix top.sls ordering (issue 10810 and issue 11691)
- Fix `salt-key --list all` (issue 10982)
- Fix win_servermanager install/remove function (issue 11038)
- Fix interaction with tokens when running commands as root (issue 11223)
- Fix overstate bug with `find_job` and `**kwargs` (issue 10503)
- Fix `saltenv` for `aptpkg.mod_repo` from `pkgrepo` state
- Fix environment issue causing file caching problems (issue 11189)
- Fix bug in `__parse_key` in registry state (issue 11408)
- Add minion auth retry on rejection (issue 10763)
- Fix publish_session updating the encryption key (issue 11493)
- Fix for bad `AssertionError` raised by GitPython (issue 11473)
- Fix `debian_ip` to allow disabling and enabling networking on Ubuntu (issue 11164)
- Fix potential memory leak caused by saved (and unused) events (issue 11582)
- Fix exception handling in the MySQL module (issue 11616)
- Fix environment-related error (issue 11534)
- Include `psutil` on Windows
- Add `file.replace` and `file.search` to Windows (issue 11471)
- Add additional `file` module helpers to Windows (issue 11235)
- Add `pid` to netstat output on Windows (issue 10782)

- Fix Windows not caching new versions of installers in winrepo (issue 10597)
- Fix hardcoded md5 hashing
- Fix kwargs in salt-ssh (issue 11609)
- Fix file backup timestamps (issue 11745)
- Fix stacktrace on `sys.doc` with invalid eauth (issue 11293)
- Fix `git.latest` with `test=True` (issue 11595)
- Fix `file.check_perms` hardcoded `follow_symlinks` (issue 11387)
- Fix certain `pkg` states for RHEL5/Cent5 machines (issue 11719)

20.2.64 Salt 2014.1.4 Release Notes

release 2014-05-05

Version 2014.1.4 is another bugfix release for *2014.1.0*. Changes include:

- Fix setup.py dependency issue (issue 12031)
- Fix handling for IOErrors under certain circumstances (issue 11783 and issue 11853)
- Fix fatal exception when `/proc/1/cgroup` is not readable (issue 11619)
- Fix os grains for OpenSolaris (issue 11907)
- Fix `lvs.zero` module argument pass-through (issue 9001)
- Fix bug in `debian_ip` interaction with *`network.system`* state (issue 11164)
- Remove bad binary package verification code (issue 12177)
- Fix traceback in solaris package installation (issue 12237)
- Fix *`file.directory`* state symlink handling (issue 12209)
- Remove `external_ip` grain
- Fix *`file.managed`* makedirs issues (issue 10446)
- Fix hang on non-existent Windows drive letter for *`file`* module (issue 9880)
- Fix salt minion caching all users on the server (issue 9743)
- Add strftime formatting for *`ps.boot_time`* (issue 12428)

20.2.65 Salt 2014.1.5 Release Notes

release 2014-06-11

Version 2014.1.5 is another bugfix release for *2014.1.0*. Changes include:

- Add function for finding cached job on the minion
- Fix iptables save file location for Debian (issue 11730)
- Fix for minion caching jobs when master is down
- Bump default `syndic_wait` to 5 to fix syndic-related problems (issue 12262)
- Add OpenBSD, FreeBSD, and NetBSD support for `network.netstat` (issue 12121)
- Fix false positive error in logs for `makeconf` state (issue 9762)

- Fix for yum `fromrepo` package installs when repo is disabled by default (issue 12466)
- Fix for extra blank lines in `file.blockreplace` (issue 12422)
- Fix grain detection for OpenVZ guests (issue 11877)
- Fix `get_dns_servers` function for Windows `win_dns_client`
- Use system locale for ports package installations
- Use correct stop/restart procedure for Debian networking in `debian_ip` (issue 12614)
- Fix for `cmd_iter`/`cmd_iter_no_block` blocking issues (issue 12617)
- Fix traceback when syncing custom types (issue 12883)
- Fix cleaning directory symlinks in `file.directory`
- Add performance optimizations for `saltutil.sync_all` and `state.highstate`
- Fix possible error in `saltutil.running`
- Fix for kmod modules with dashes (issue 13239)
- Fix possible race condition for Windows minions in state module reloading (issue 12370)
- Fix bug with roster for `passwd` option that is loaded as a non-string object (issue 13249)
- Keep duplicate version numbers from showing up in `pkg.list_pkgs` output
- Fixes for Jinja renderer, timezone *`module`*/*`state`* (issue 12724)
- Fix timedatectl parsing for systemd>=210 (issue 12728)
- Fix `saltenv` being written to YUM repo config files (issue 12887)
- Removed the deprecated external nodes classifier (originally accessible by setting a value for external_nodes in the master configuration file). Note that this functionality has been marked deprecated for some time and was replaced by the more general *master tops* system.
- More robust escaping of ldap filter strings.
- Fix trailing slash in *`gitfs_root`* causing files not to be available (issue 13185)

20.2.66 Salt 2014.1.6 Release Notes

release 2014-07-08

Version 2014.1.6 is another bugfix release for *2014.1.0*. Changes include:

- Fix extra `iptables --help` output (Sorry!) (issue 13648, issue 13507, issue 13527, issue 13607)
- Fix `mount.active` for Solaris
- Fix support for `allow-hotplug` statement in debian_ip network module
- Add sqlite3 to esky builds
- Fix `jobs.active` output (issue 9526)
- Fix the `virtual` grain for Xen (issue 13534)
- Fix _ext_nodes unavailable on master (issue 13535)
- Fix eauth for batch mode (issue 9605)
- Fix force-related issues with `tomcat` support (issue 12889)
- Fix KeyError when cloud mapping

- Fix salt-minion restart loop in Windows (issue 12086)
- Fix detection of `service` virtual module on Fedora minions
- Fix traceback with missing ipv4 grain (issue 13838)
- Fix issue in roots backend with invalid data in mtime_map (issue 13836)
- Fix traceback in `jobs.active` (issue 11151)
- Fix `master_tops` and `_ext_nodes` issue (issue 13535, issue 13673)

20.2.67 Salt 2014.1.7 Release Notes

release 2014-07-09

Version 2014.1.7 is another bugfix release for *2014.1.0*. Changes include:

- Fix batch mode regression (issue 14046)

This release was a hotfix release for the regression listed above which was present in the 2014.1.6 release. The changes included in 2014.1.6 are listed below:

- Fix extra `iptables --help` output (Sorry!) (issue 13648, issue 13507, issue 13527, issue 13607)
- Fix `mount.active` for Solaris
- Fix support for `allow-hotplug` statement in debian_ip network module
- Add sqlite3 to esky builds
- Fix `jobs.active` output (issue 9526)
- Fix the `virtual` grain for Xen (issue 13534)
- Fix eauth for batch mode (issue 9605)
- Fix force-related issues with `tomcat` support (issue 12889)
- Fix KeyError when cloud mapping
- Fix salt-minion restart loop in Windows (issue 12086)
- Fix detection of `service` virtual module on Fedora minions
- Fix traceback with missing ipv4 grain (issue 13838)
- Fix issue in roots backend with invalid data in mtime_map (issue 13836)
- Fix traceback in `jobs.active` (issue 11151)
- Fix `master_tops` and `_ext_nodes` issue (issue 13535, issue 13673)

20.2.68 Salt 2014.1.8 Release Notes

release 2014-07-30

Note: This release contained a regression which caused inaccurate Salt version detection, and thus was never packaged for general release. Please use version 2014.1.10 instead.

Version 2014.1.8 is another bugfix release for *2014.1.0*. Changes include:

- Ensure salt-ssh will not continue if permissions on a temporary directory are not correct.

- Use the bootstrap script distributed with Salt instead of relying on an external resource
- Remove unused testing code
- Ensure salt states are placed into the `.salt` directory in salt-ssh
- Use a randomized path for temporary files in a salt-cloud deployment
- Clean any stale directories to ensure a fresh copy of salt-ssh during a deployment

20.2.69 Salt 2014.1.9 Release Notes

release 2014-07-31

Note: This release contained a regression which caused inaccurate Salt version detection, and thus was never packaged for general release. Please use version 2014.1.10 instead.

Note: Version 2014.1.8 contained a regression which caused inaccurate Salt version detection, and thus was never packaged for general release. This version contains the version detection fix, but is otherwise identical to 2014.1.8.

Version 2014.1.9 is another bugfix release for *2014.1.0*. Changes include:

- Ensure salt-ssh will not continue if permissions on a temporary directory are not correct.
- Use the bootstrap script distributed with Salt instead of relying on an external resource
- Remove unused testing code
- Ensure salt states are placed into the `.salt` directory in salt-ssh
- Use a randomized path for temporary files in a salt-cloud deployment
- Clean any stale directories to ensure a fresh copy of salt-ssh during a deployment

20.2.70 Salt 0.10.0 Release Notes

release 2012-06-16

0.10.0 has arrived! This release comes with MANY bug fixes, and new capabilities which greatly enhance performance and reliability. This release is primarily a bug fix release with many new tests and many repaired bugs. This release also introduces a few new key features which were brought in primarily to repair bugs and some limitations found in some of the components of the original architecture.

Major Features

Event System

The Salt Master now comes equipped with a new event system. This event system has replaced some of the back end of the Salt client and offers the beginning of a system which will make plugging external applications into Salt. The event system relies on a local ZeroMQ publish socket and other processes can connect to this socket and listen for events. The new events can be easily managed via Salt's event library.

Unprivileged User Updates

Some enhancements have been added to Salt for running as a user other than root. These new additions should make switching the user that the Salt Master is running as very painless, simply change the `user` option in the master configuration and restart the master, Salt will take care of all of the particulars for you.

Peer Runner Execution

Salt has long had the peer communication system used to allow minions to send commands via the salt master. 0.10.0 adds a new capability here, now the master can be configured to allow for minions to execute Salt runners via the `peer_run` option in the salt master configuration.

YAML Parsing Updates

In the past the YAML parser for sls files would return the incorrect numbers when the file mode was set with a preceding 0. The YAML parser used in Salt has been modified to no longer convert these number into octal but to keep them as the correct value so that sls files can be a little cleaner to write.

State Call Data Files

It was requested that the minion keep a local cache of the most recent executed state run. This has been added and now with state runs the data is stored in a msgpack file in the minion's cachedir.

Turning Off the Job Cache

A new option has been added to the master configuration file. In previous releases the Salt client would look over the Salt job cache to read in the minion return data. With the addition of the event system the Salt client can now watch for events directly from the master worker processes.

This means that the job cache is no longer a hard requirement. Keep in mind though, that turning off the job cache means that historic job execution data cannot be retrieved.

Test Updates

Minion Swarms Are Faster

To continue our efforts with testing Salt's ability to scale the minionswarm script has been updated. The minionswarm can now start up minions much faster than it could before and comes with a new feature allowing modules to be disabled, thus lowering the minion's footprint when making a swarm. These new updates have allows us to test

```
# python minionswarm.py -m 20 --master salt-master
```

Many Fixes

To get a good idea for the number of bugfixes this release offers take a look at the closed tickets for 0.10.0, this is a very substantial update:

https://github.com/saltstack/salt/issues?milestone=12&state=closed

Master and Minion Stability Fixes

As Salt deployments grow new ways to break Salt are discovered. 0.10.0 comes with a number of fixes for the minions and master greatly improving Salt stability.

20.2.71 Salt 0.10.1 Release Notes

release 2012-06-19

20.2.72 Salt 0.10.2 Release Notes

release 2012-07-30

0.10.2 is out! This release comes with enhancements to the pillar interface, cleaner ways to access the salt-call capabilities in the API, minion data caching and the event system has been added to salt minions.

There have also been updates to the ZeroMQ functions, many more tests (thanks to sponsors, the code sprint and many contributors) and a swath of bug fixes.

Major Features

Ext Pillar Modules

The ranks of available Salt modules directories sees a new member in 0.10.2. With the popularity of pillar a higher demand has arisen for `ext_pillar` interfaces to be more like regular Salt module additions. Now ext_pillar interfaces can be added in the same way as other modules, just drop it into the pillar directory in the salt source.

Minion Events

In 0.10.0 an event system was added to the Salt master. 0.10.2 adds the event system to the minions as well. Now event can be published on a local minion as well.

The minions can also send events back up to the master. This means that Salt is able to communicate individual events from the minions back up to the Master which are not associated with command.

Minion Data Caching

When pillar was introduced the landscape for available data was greatly enhanced. The minion's began sending grain data back to the master on a regular basis.

The new config option on the master called `minion_data_cache` instructs the Salt master to maintain a cache of the minion's grains and pillar data in the cachedir. This option is turned off by default to avoid hitting the disk more, but when enabled the cache is used to make grain matching from the salt command more powerful, since the minions that will match can be predetermined.

Backup Files

By default all files replaced by the file.managed and file.recurse states we simply deleted. 0.10.2 adds a new option. By setting the backup option to `minion` the files are backed up before they are replaced.

The backed up files are located in the cachedir under the file_backup directory. On a default system this will be at: `/var/cache/salt/file_backup`

Configuration files

`salt-master` and `salt-minion` automatically load additional configuration files from `master.d/*.conf` respective `minion.d/*.conf` where `master.d`/`minion.d` is a directory in the same directory as the main configuration file.

Salt Key Verification

A number of users complained that they had inadvertently deleted the wrong salt authentication keys. 0.10.2 now displays what keys are going to be deleted and verifies that they are the keys that are intended for deletion.

Key auto-signing

If `autosign_file` is specified in the configuration file incoming keys will be compared to the list of keynames in `autosign_file`. Regular expressions as well as globbing is supported.

The file must only be writable by the user otherwise the file will be ignored. To relax the permission and allow group write access set the `permissive_pki_access` option.

Module changes

Improved OpenBSD support

New modules for managing services and packages were provided by Joshua Elsasser to further improve the support for OpenBSD.

Existing modules like the *disk* module were also improved to support OpenBSD.

SQL Modules

The MySQL and PostgreSQL modules have both received a number of additions thanks to the work of Avi Marcus and Roman Imankulov.

ZFS Support on FreeBSD

A new ZFS module has been added by Kurtis Velarde for FreeBSD supporting various ZFS operations like creating, extending or removing zpools.

Augeas

A new Augeas module by Ulrich Dangel for editing and verifying config files.

Native Debian Service module

The support for the Debian was further improved with an new service module for Debian by Ahmad Khayyat supporting *disable* and *enable*.

Cassandra

Cassandra support has been added by Adam Garside. Currently only status and diagnostic information are supported.

Networking

The networking support for *RHEL* has been improved and supports bonding support as well as zeroconf configuration.

Monit

Basic monit support by Kurtis Velarde to control services via monit.

nzbget

Basic support for controlling nzbget by Joseph Hall

Bluetooth

Baisc `bluez` support for managing and controlling Bluetooth devices. Supports scanning as well as pairing/unpairing by Joseph Hall.

Test Updates

Consistency Testing

Another testing script has been added. A bug was found in pillar when many minions generated pillar data at the same time. The new `consist.py` script is the tests directory was created to reproduce bugs where data should always be consistent.

Many Fixes

To get a good idea for the number of bugfixes this release offers take a look at the closed tickets for 0.10.2, this is a very substantial update:

https://github.com/saltstack/salt/issues?milestone=24&page=1&state=closed

Master and Minion Stability Fixes

As Salt deployments grow new ways to break Salt are discovered. 0.10.2 comes with a number of fixes for the minions and master greatly improving Salt stability.

20.2.73 Salt 0.10.3 Release Notes

release 2012-09-30

The latest taste of Salt has come, this release has many fixes and feature additions. Modifications have been made to make ZeroMQ connections more reliable, the beginning of the ACL system is in place, a new command line parsing system has been added, dynamic module distribution has become more environment aware, the new *master_finger* option and many more!

Major Features

ACL System

The new ACL system has been introduced. The ACL system allows for system users other than root to execute salt commands. Users can be allowed to execute specific commands in the same way that minions are opened up to the peer system.

The configuration value to open up the ACL system is called `client_acl` and is configured like so:

```
client_acl:
  fred:
    - test..*
    - pkg.list_pkgs
```

Where *fred* is allowed access to functions in the test module and to the `pkg.list_pkgs` function.

Master Finger Option

The *master_finger* option has been added to improve the security of minion provisioning. The *master_finger* option allows for the fingerprint of the master public key to be set in the configuration file to double verify that the master is valid. This option was added in response to a motivation to pre-authenticate the master when provisioning new minions to help prevent man in the middle attacks in some situations.

Salt Key Fingerprint Generation

The ability to generate fingerprints of keys used by Salt has been added to `salt-key`. The new option *finger* accepts the name of the key to generate and display a fingerprint for.

```
salt-key -F master
```

Will display the fingerprints for the master public and private keys.

Parsing System

Pedro Algavio, aka s0undt3ch, has added a substantial update to the command line parsing system that makes the help message output much cleaner and easier to search through. Salt parsers now have *--versions-report* besides usual *--version* info which you can provide when reporting any issues found.

Key Generation

We have reduced the requirements needed for *salt-key* to generate minion keys. You're no longer required to have salt configured and it's common directories created just to generate keys. This might prove useful if you're batch creating keys to pre-load on minions.

Startup States

A few configuration options have been added which allow for states to be run when the minion daemon starts. This can be a great advantage when deploying with Salt because the minion can apply states right when it first runs. To use startup states set the `startup_states` configuration option on the minion to *highstate*.

New Exclude Declaration

Some users have asked about adding the ability to ensure that other sls files or ids are excluded from a state run. The exclude statement will delete all of the data loaded from the specified sls file or will delete the specified id:

```
exclude:
  - sls: http
  - id: /etc/vimrc
```

Max Open Files

While we're currently unable to properly handle ZeroMQ's abort signals when the max open files is reached, due to the way that's handled on ZeroMQ's, we have minimized the chances of this happening without at least warning the user.

More State Output Options

Some major changes have been made to the state output system. In the past state return data was printed in a very verbose fashion and only states that failed or made changes were printed by default. Now two options can be passed to the master and minion configuration files to change the behavior of the state output. State output can be set to verbose (default) or non-verbose with the `state_verbose` option:

```
state_verbose: False
```

It is noteworthy that the state_verbose option used to be set to *False* by default but has been changed to *True* by default in 0.10.3 due to many requests for the change.

Te next option to be aware of new and called `state_output`. This option allows for the state output to be set to *full* (default) or *terse*.

The *full* output is the standard state output, but the new *terse* output will print only one line per state making the output much easier to follow when executing a large state system.

```
state_output: terse
```

state.file.append Improvements

The salt state *file.append()* tries *not* to append existing text. Previously the matching check was being made line by line. While this kind of check might be enough for most cases, if the text being appended was multi-line, the check would not work properly. This issue is now properly handled, the match is done as a whole ignoring any white space addition or removal except inside commas. For those thinking that, in order to properly match over multiple lines, salt will load the whole file into memory, that's not true. For most cases this is not important but an erroneous order to read a 4GB file, if not properly handled, like salt does, could make salt chew that amount of memory. Salt has a buffered file reader which will keep in memory a maximum of 256KB and iterates over the file in chunks of 32KB to test for the match, more than enough, if not, explain your usage on a ticket. With this change, also *salt.modules.file.contains()*, *salt.modules.file.contains_regex()*, *salt.modules.file.contains_glob()* and *salt.utils.find* now do the searching and/or matching using the buffered chunks approach explained above.

Two new keyword arguments were also added, *makedirs*, and *source*. The first, *makedirs* will create the necessary directories in order to append to the specified file, of course, it only applies if we're trying to append to a non-existing file on a non-existing directory:

```
/tmp/salttest/file-append-makedirs:
    file.append:
        text: foo
        makedirs: True
```

The second, *source*, allows one to append the contents of a file instead of specifying the text.

```
/tmp/salttest/file-append-source:

file.append:
    - source: salt://testfile
```

Security Fix

A timing vulnerability was uncovered in the code which decrypts the AES messages sent over the network. This has been fixed and upgrading is strongly recommended.

20.2.74 Salt 0.10.4 Release Notes

release 2012-10-23

Salt 0.10.4 is a monumental release for the Salt team, with two new module systems, many additions to allow granular access to Salt, improved platform support and much more.

This release is also exciting because we have been able to shorten the release cycle back to under a month. We are working hard to keep up the aggressive pace and look forward to having releases happen more frequently!

This release also includes a serious security fix and all users are very strongly recommended to upgrade. As usual, upgrade the master first, and then the minion to ensure that the process is smooth.

Major Features

External Authentication System

The new external authentication system allows for Salt to pass through authentication to any authentication system to determine if a user has permission to execute a Salt command. The Unix PAM system is the first supported system with more to come!

The external authentication system allows for specific users to be granted access to execute specific functions on specific minions. Access is configured in the master configuration file, and uses the new access control system:

```
external_auth:
  pam:
    thatch:
      - 'web*':
        - test.*
        - network.*
```

The configuration above allows the user *thatch* to execute functions in the test and network modules on minions that match the web* target.

Access Control System

All Salt systems can now be configured to grant access to non-administrative users in a granular way. The old configuration continues to work. Specific functions can be opened up to specific minions from specific users in the case of external auth and client ACLs, and for specific minions in the case of the peer system.

Access controls are configured like this:

```
client_acl:
  fred:
    - web\*:
      - pkg.list_pkgs
      - test.*
      - apache.*
```

Target by Network

A new matcher has been added to the system which allows for minions to be targeted by network. This new matcher can be called with the *-S* flag on the command line and is available in all places that the matcher system is available. Using it is simple:

```
$ salt -S '192.168.1.0/24' test.ping
$ salt -S '192.168.1.100' test.ping
```

Nodegroup Nesting

Previously a nodegroup was limited by not being able to include another nodegroup, this restraint has been lifted and now nodegroups will be expanded within other nodegroups with the *N@* classifier.

Salt Key Delete by Glob

The ability to delete minion keys by glob has been added to `salt-key`. To delete all minion keys whose minion name starts with `web':

```
$ salt-key -d 'web*'
```

Master Tops System

The *external_nodes* system has been upgraded to allow for modular subsystems to be used to generate the top file data for a highstate run.

The *external_nodes* option still works but will be deprecated in the future in favor of the new *master_tops* option.

Example of using *master_tops*:

```
master_tops:
  ext_nodes: cobbler-external-nodes
```

Next Level Solaris Support

A lot of work has been put into improved Solaris support by Romeo Theriault. Packaging modules (pkgadd/pkgrm and pkgutil) and states, cron support and user and group management have all been added and improved upon. These additions along with SMF (Service Management Facility) service support and improved Solaris grain detection in 0.10.3 add up to Salt becoming a great tool to manage Solaris servers with.

Security

A vulnerability in the security handshake was found and has been repaired, old minions should be able to connect to a new master, so as usual, the master should be updated first and then the minions.

Pillar Updates

The pillar communication has been updated to add some extra levels of verification so that the intended minion is the only one allowed to gather the data. Once all minions and the master are updated to salt 0.10.4 please activate pillar *2* by changing the *pillar_version* in the master config to *2*. This will be set to *2* by default in a future release.

20.2.75 Salt 0.10.5 Release Notes

release 2012-11-15

Salt 0.10.5 is ready, and comes with some great new features. A few more interfaces have been modularized, like the outputter system. The job cache system has been made more powerful and can now store and retrieve jobs archived in external databases. The returner system has been extended to allow minions to easily retrieve data from a returner interface.

As usual, this is an exciting release, with many noteworthy additions!

Major Features

External Job Cache

The external job cache is a system which allows for a returner interface to also act as a job cache. This system is intended to allow users to store job information in a central location for longer periods of time and to make the act of looking up information from jobs executed on other minions easier.

Currently the external job cache is supported via the mongo and redis returners:

```
ext_job_cache: redis
redis.host: salt
```

Once the external job cache is turned on the new *ret* module can be used on the minions to retrieve return information from the job cache. This can be a great way for minions to respond and react to other minions.

OpenStack Additions

OpenStack integration with Salt has been moving forward at a blistering pace. The new *nova*, *glance*, and *keystone* modules represent the beginning of ongoing OpenStack integration.

The Salt team has had many conversations with core OpenStack developers and is working on linking to OpenStack in powerful new ways.

Wheel System

A new API was added to the Salt Master which allows the master to be managed via an external API. This new system allows Salt API to easily hook into the Salt Master and manage configs, modify the state tree, manage the pillar and more. The main motivation for the wheel system is to enable features needed in the upcoming web UI so users can manage the master just as easily as they manage minions.

The wheel system has also been hooked into the external auth system. This allows specific users to have granular access to manage components of the Salt Master.

Render Pipes

Jack Kuan has added a substantial new feature. The render pipes system allows Salt to treat the render system like unix pipes. This new system enables sls files to be passed through specific render engines. While the default renderer is still recommended, different engines can now be more easily merged. So to pipe the output of Mako used in YAML use this shebang line:

#!mako|yaml

Salt Key Overhaul

The Salt Key system was originally developed as only a CLI interface, but as time went on it was pressed into becoming a clumsy API. This release marks a complete overhaul of Salt Key. Salt Key has been rewritten to function purely from an API and to use the outputter system. The benefit here is that the outputter system works much more cleanly with Salt Key now, and the internals of Salt Key can be used much more cleanly.

Modular Outputters

The outputter system is now loaded in a modular way. This means that output systems can be more easily added by dropping a python file down on the master that contains the function *output*.

Gzip from Fileserver

Gzip compression has been added as an option to the cp.get_file and cp.get_dir commands. This will make file transfers more efficient and faster, especially over slower network links.

Unified Module Configuration

In past releases of Salt, the minions needed to be configured for certain modules to function. This was difficult because it required pre-configuring the minions. 0.10.5 changes this by making all module configs on minions search the master config file for values.

Now if a single database server is needed, then it can be defined in the master config and all minions will become aware of the configuration value.

Salt Call Enhancements

The `salt-call` command has been updated in a few ways. Now, `salt-call` can take the --return option to send the data to a returner. Also, `salt-call` now reports executions in the minion proc system, this allows the master to be aware of the operation salt-call is running.

Death to pub_refresh and sub_timeout

The old configuration values *pub_refresh* and *sub_timeout* have been removed. These options were in place to alleviate problems found in earlier versions of ZeroMQ which have since been fixed. The continued use of these options has proven to cause problems with message passing and have been completely removed.

Git Revision Versions

When running Salt directly from git (for testing or development, of course) it has been difficult to know exactly what code is being executed. The new versioning system will detect the git revision when building and how many commits have been made since the last release. A release from git will look like this:

0.10.4-736-gec74d69

Svn Module Addition

Anthony Cornehl (twinshadow) contributed a module that adds Subversion support to Salt. This great addition helps round out Salt's VCS support.

Noteworthy Changes

Arch Linux Defaults to Systemd

Arch Linux recently changed to use systemd by default and discontinued support for init scripts. Salt has followed suit and defaults to systemd now for managing services in Arch.

Salt, Salt Cloud and Openstack

With the releases of Salt 0.10.5 and Salt Cloud 0.8.2, OpenStack becomes the first (non-OS) piece of software to include support both on the user level (with Salt Cloud) and the admin level (with Salt). We are excited to continue to extend support of other platforms at this level.

20.2.76 Salt 0.11.0 Release Notes

release 2012-12-14

Salt 0.11.0 is here, with some highly sought after and exciting features. These features include the new overstate system, the reactor system, a new state run scope component called __context__, the beginning of the search system (still needs a great deal of work), multiple package states, the MySQL returner and a better system to arbitrarily reference outputters.

It is also noteworthy that we are changing how we mark release numbers. For the life of the project we have been pushing every release with features and fixes as point releases. We will now be releasing point releases for only bug fixes on a more regular basis and major feature releases on a slightly less regular basis. This means that the next release will be a bugfix only release with a version number of 0.11.1. The next feature release will be named 0.12.0 and will mark the end of life for the 0.11 series.

Major Features

OverState

The overstate system is a simple way to manage rolling state executions across many minions. The overstate allows for a state to depend on the successful completion of another state.

Reactor System

The new reactor system allows for a reactive logic engine to be created which can respond to events within a salted environment. The reactor system uses sls files to match events fired on the master with actions, enabling Salt to react to problems in an infrastructure.

Your load-balanced group of webservers is under extra load? Spin up a new VM and add it to the group. Your fileserver is filling up? Send a notification to your sysadmin on call. The possibilities are endless!

Module Context

A new component has been added to the module loader system. The module context is a data structure that can hold objects for a given scope within the module.

This allows for components that are initialized to be stored in a persistent context which can greatly speed up ongoing connections. Right now the best example can be found in the *cp* execution module.

Multiple Package Management

A long desired feature has been added to package management. By definition Salt States have always installed packages one at a time. On most platforms this is not the fastest way to install packages. Erik Johnson, aka terminalmage, has modified the package modules for many providers and added new capabilities to install groups of packages. These package groups can be defined as a list of packages available in repository servers:

```
python_pkgs:
  pkg.installed:
    - pkgs:
      - python-mako
      - whoosh
      - python-git
```

or specify based on the location of specific packages:

```
python_pkgs:
  pkg.installed:
    - sources:
      - python-mako: http://some-rpms.org/python-mako.rpm
      - whoosh: salt://whoosh/whoosh.rpm
      - python-git: ftp://companyserver.net/python-git.rpm
```

Search System

The bones to the search system have been added. This is a very basic interface that allows for search backends to be added as search modules. The first supported search module is the whoosh search backend. Right now only the basic paths for the search system are in place, making this very experimental. Further development will involve improving the search routines and index routines for whoosh and other search backends.

The search system has been made to allow for searching through all of the state and pillar files, configuration files and all return data from minion executions.

Notable Changes

All previous versions of Salt have shared many directories between the master and minion. The default locations for keys, cached data and sockets has been shared by master and minion. This has created serious problems with running a master and a minion on the same systems. 0.11.0 changes the defaults to be separate directories. Salt will also attempt to migrate all of the old key data into the correct new directories, but if it is not successful it may need to be done manually. If your keys exhibit issues after updating make sure that they have been moved from `/etc/salt/pki` to `/etc/salt/pki/{master,minion}`.

The old setup will look like this:

```
/etc/salt/pki
|-- master.pem
|-- master.pub
|-- minions
|   `-- ragnarok.saltstack.net
|-- minions_pre
|-- minion.pem
|-- minion.pub
|-- minion_master.pub
|-- minions_pre
`-- minions_rejected
```

With the accepted minion keys in `/etc/salt/pki/minions`, the new setup places the accepted minion keys in `/etc/salt/pki/master/minions`.

```
/etc/salt/pki
|-- master
|   |-- master.pem
|   |-- master.pub
|   |-- minions
|   |   `-- ragnarok.saltstack.net
|   |-- minions_pre
|   `-- minions_rejected
|-- minion
```

```
|    |-- minion.pem
|    |-- minion.pub
|    `-- minion_master.pub
```

20.2.77 Salt 0.11.1 Release Notes

release 2012-12-19

20.2.78 Salt 0.12.0 Release Notes

release 2013-01-15

Another feature release of Salt is here! Some exciting additions are included with more ways to make salt modular and even easier management of the salt file server.

Major Features

Modular Fileserver Backend

The new modular fileserver backend allows for any external system to be used as a salt file server. The main benefit here is that it is now possible to tell the master to directly use a git remote location, or many git remote locations, automatically mapping git branches and tags to salt environments.

Windows is First Class!

A new Salt Windows installer is now available! Much work has been put in to improve Windows support. With this much easier method of getting Salt on your Windows machines, we hope even more development and progress will occur. Please file bug reports on the Salt GitHub repo issue tracker so we can continue improving.

One thing that is missing on Windows that Salt uses extensively is a software package manager and a software package repository. The Salt pkg state allows sys admins to install software across their infrastructure and across operating systems. Software on Windows can now be managed in the same way. The SaltStack team built a package manager that interfaces with the standard Salt pkg module to allow for installing and removing software on Windows. In addition, a software package repository has been built on top of the Salt fileserver. A small YAML file provides the information necessary for the package manager to install and remove software.

An interesting feature of the new Salt Windows software package repository is that one or more remote git repositories can supplement the master's local repository. The repository can point to software on the master's fileserver or on an HTTP, HTTPS, or ftp server.

New Default Outputter

Salt displays data to the terminal via the outputter system. For a long time the default outputter for Salt has been the python pretty print library. While this has been a generally reasonable outputter, it did have many failings. The new default outputter is called ``nested'', it recursively scans return data structures and prints them out cleanly.

If the result of the new nested outputter is not desired any other outputter can be used via the --out option, or the output option can be set in the master and minion configs to change the default outputter.

Internal Scheduler

The internal Salt scheduler is a new capability which allows for functions to be executed at given intervals on the minion, and for runners to be executed at given intervals on the master. The scheduler allows for sequences such as executing state runs (locally on the minion or remotely via an overstate) or continually gathering system data to be run at given intervals.

The configuration is simple, add the schedule option to the master or minion config and specify jobs to run, this in the master config will execute the state.over runner every 60 minutes:

```
schedule:
  overstate:
    function: state.over
    minutes: 60
```

This example for the minion configuration will execute a highstate every 30 minutes:

```
schedule:
  highstate:
    function: state.highstate
    minutes: 30
```

Optional DSL for SLS Formulas

Jack Kuan, our renderer expert, has created something that is astonishing. Salt, now comes with an optional Python based DSL, this is a very powerful interface that makes writing SLS files in pure python easier than it was with the raw py renderer. As usual this can be used with the renderer shebang line, so a single sls can be written with the DSL if pure python power is needed while keeping other sls files simple with YAML.

Set Grains Remotely

A new execution function and state module have been added that allows for grains to be set on the minion. Now grains can be set via a remote execution or via states. Use the *grains.present* state or the *grains.setval* execution functions.

Gentoo Additions

Major additions to Gentoo specific components have been made. The encompasses executions modules and states ranging from supporting the make.conf file to tools like layman.

20.2.79 Salt 0.12.1 Release Notes

release 2013-01-21

20.2.80 Salt 0.13.0 Release Notes

release 2013-02-12

The lucky number 13 has turned the corner! From CLI notifications when quitting a salt command, to substantial improvements on Windows, Salt 0.13.0 has arrived!

Major Features

Improved file.recurse Performance

The file.recurse system has been deployed and used in a vast array of situations. Fixes to the file state and module have led towards opening up new ways of running file.recurse to make it faster. Now the file.recurse state will download fewer files and will run substantially faster.

Windows Improvements

Minion stability on Windows has improved. Many file operations, including file.recurse, have been fixed and improved. The network module works better, to include network.interfaces. Both 32bit and 64bit installers are now available.

Nodegroup Targeting in Peer System

In the past, nodegroups were not available for targeting via the peer system. This has been fixed, allowing the new nodegroup expr_form argument for the publish.publish function:

salt-call publish.publish group1 test.ping expr_form=nodegroup

Blacklist Additions

Additions allowing more granular blacklisting are available in 0.13.0. The ability to blacklist users and functions in client_acl have been added, as well as the ability to exclude state formulas from the command line.

Command Line Pillar Embedding

Pillar data can now be embedded on the command line when calling `state.sls` and `state.highstate`. This allows for on the fly changes or settings to pillar and makes parameterizing state formulas even easier. This is done via the keyword argument:

```
salt '*' state.highstate pillar='{"cheese": "spam"}'
```

The above example will extend the existing pillar to hold the `cheese` key with a value of `spam`. If the `cheese` key is already specified in the minion's pillar then it will be overwritten.

CLI Notifications

In the past hitting ctrl-C and quitting from the `salt` command would just drop to a shell prompt, this caused confusion with users who expected the remote executions to also quit. Now a message is displayed showing what command can be used to track the execution and what the job id is for the execution.

Version Specification in Multiple-Package States

Versions can now be specified within multiple-package *`pkg.installed`* states. An example can be found below:

```
mypkgs:
  pkg.installed:
    - pkgs:
      - foo
      - bar: 1.2.3-4
      - baz
```

Noteworthy Changes

The configuration subsystem in Salt has been overhauled to make the `opts` dict used by Salt applications more portable, the problem is that this is an incompatible change with salt-cloud, and salt-cloud will need to be updated to the latest git to work with Salt 0.13.0. Salt Cloud 0.8.5 will also require Salt 0.13.0 or later to function.

The SaltStack team is sorry for the inconvenience here, we work hard to make sure these sorts of things do not happen, but sometimes hard changes get in.

20.2.81 Salt 0.13.1 Release Notes

release 2013-02-15

20.2.82 Salt 0.13.2 Release Notes

release 2013-03-13

20.2.83 Salt 0.13.3 Release Notes

release 2013-03-18

20.2.84 Salt 0.14.0 Release Notes

release 2013-03-23

Salt 0.14.0 is here! This release was held up primarily by PyCon, Scale, and illness, but has arrived! 0.14.0 comes with many new features and is breaking ground for Salt in the area of cloud management with the introduction of Salt providing basic cloud controller functionality.

Major Features

Salt - As a Cloud Controller

This is the first primitive inroad to using Salt as a cloud controller is available in 0.14.0. Be advised that this is alpha, only tested in a few very small environments.

The cloud controller is built using kvm and libvirt for the hypervisors. Hypervisors are autodetected as minions and only need to have libvirt running and kvm installed to function. The features of the Salt cloud controller are as follows:

- Basic vm discovery and reporting
- Creation of new virtual machines

- Seeding virtual machines with Salt via qemu-nbd or libguestfs
- Live migration (shared and non shared storage)
- Delete existing VMs

It is noteworthy that this feature is still Alpha, meaning that all rights are reserved to change the interface if needs be in future releases!

Libvirt State

One of the problems with libvirt is management of certificates needed for live migration and cross communication between hypervisors. The new `libvirt` state makes the Salt Master hold a CA and manage the signing and distribution of keys onto hypervisors, just add a call to the libvirt state in the sls formulas used to set up a hypervisor:

```
libvirt_keys:
  libvirt.keys
```

New get Functions

An easier way to manage data has been introduced. The pillar, grains, and config execution modules have been extended with the new `get` function. This function works much in the same way as the get method in a python dict, but with an enhancement, nested dict components can be extracted using a *:* delimiter.

If a structure like this is in pillar:

```
foo:
  bar:
    baz: quo
```

Extracting it from the raw pillar in an sls formula or file template is done this way:

```
{{ pillar['foo']['bar']['baz'] }}
```

Now with the new get function the data can be safely gathered and a default can be set allowing the template to fall back if the value is not available:

```
{{ salt['pillar.get']('foo:bar:baz', 'qux') }}
```

This makes handling nested structures much easier, and defaults can be cleanly set. This new function is being used extensively in the new formulae repository of salt sls formulas.

20.2.85 Salt 0.14.1 Release Notes

release 2013-04-13

20.2.86 Salt 0.15.0 Release Notes

release 2013-05-03

The many new features of Salt 0.15.0 have arrived! Salt 0.15.0 comes with many smaller features and a few larger ones.

These features range from better debugging tools to the new Salt Mine system.

Major Features

The Salt Mine

First there was the peer system, allowing for commands to be executed from a minion to other minions to gather data live. Then there was the external job cache for storing and accessing long term data. Now the middle ground is being filled in with the Salt Mine. The Salt Mine is a system used to execute functions on a regular basis on minions and then store only the most recent data from the functions on the master, then the data is looked up via targets.

The mine caches data that is public to all minions, so when a minion posts data to the mine all other minions can see it.

IPV6 Support

0.13.0 saw the addition of initial IPV6 support but errors were encountered and it needed to be stripped out. This time the code covers more cases and must be explicitly enabled. But the support is much more extensive than before.

Copy Files From Minions to the Master

Minions have long been able to copy files down from the master file server, but until now files could not be easily copied from the minion up to the master.

A new function called `cp.push` can push files from the minions up to the master server. The uploaded files are then cached on the master in the master cachedir for each minion.

Better Template Debugging

Template errors have long been a burden when writing states and pillar. 0.15.0 will now send the compiled template data to the debug log, this makes tracking down the intermittent stage templates much easier. So running state.sls or state.highstate with *-l debug* will now print out the rendered templates in the debug information.

State Event Firing

The state system is now more closely tied to the master's event bus. Now when a state fails the failure will be fired on the master event bus so that the reactor can respond to it.

Major Syndic Updates

The Syndic system has been basically re-written. Now it runs in a completely asynchronous way and functions primarily as an event broker. This means that the events fired on the syndic are now pushed up to the higher level master instead of the old method used which waited for the client libraries to return.

This makes the syndic much more accurate and powerful, it also means that all events fired on the syndic master make it up the pipe as well making a reactor on the higher level master able to react to minions further downstream.

Peer System Updates

The Peer System has been updated to run using the client libraries instead of firing directly over the publish bus. This makes the peer system much more consistent and reliable.

Minion Key Revocation

In the past when a minion was decommissioned the key needed to be manually deleted on the master, but now a function on the minion can be used to revoke the calling minion's key:

```
$ salt-call saltutil.revoke_auth
```

Function Return Codes

Functions can now be assigned numeric return codes to determine if the function executed successfully. While not all functions have been given return codes, many have and it is an ongoing effort to fill out all functions that might return a non-zero return code.

Functions in Overstate

The overstate system was originally created to just manage the execution of states, but with the addition of return codes to functions, requisite logic can now be used with respect to the overstate. This means that an overstate stage can now run single functions instead of just state executions.

Pillar Error Reporting

Previously if errors surfaced in pillar, then the pillar would consist of only an empty dict. Now all data that was successfully rendered stays in pillar and the render error is also made available. If errors are found in the pillar, states will refuse to run.

Using Cached State Data

Sometimes states are executed purely to maintain a specific state rather than to update states with new configs. This is grounds for the new cached state system. By adding *cache=True* to a state call the state will not be generated fresh from the master but the last state data to be generated will be used. If no previous state data is available then fresh data will be generated.

Monitoring States

The new monitoring states system has been started. This is very young but allows for states to be used to configure monitoring routines. So far only one monitoring state is available, the `disk.status` state. As more capabilities are added to Salt UI the monitoring capabilities of Salt will continue to be expanded.

20.2.87 Salt 0.15.1 Release Notes

release 2013-05-08

The 0.15.1 release has been posted, this release includes fixes to a number of bugs in 0.15.1 and a three security patches.

Security Updates

A number of security issues have been resolved via the 0.15.1 release.

Path Injection in Minion IDs

Salt masters did not properly validate the id of a connecting minion. This can lead to an attacker uploading files to the master in arbitrary locations. In particular this can be used to bypass the manual validation of new unknown minions. Exploiting this vulnerability does not require authentication.

This issue affects all known versions of Salt.

This issue was reported by Ronald Volgers.

Patch

The issue is fixed in Salt 0.15.1. Updated packages are available in the usual locations.

Specific commits:

https://github.com/saltstack/salt/commit/5427b9438e452a5a8910d9128c6aafb45d8fd5d3

https://github.com/saltstack/salt/commit/7560908ee62351769c3cd43b03d74c1ca772cc52

https://github.com/saltstack/salt/commit/e200b8a7ff53780124e08d2bdefde7587e52bfca

RSA Key Generation Fault

RSA key generation was done incorrectly, leading to very insecure keys. It is recommended to regenerate all RSA keys.

This issue can be used to impersonate Salt masters or minions, or decrypt any transferred data.

This issue can only be exploited by attackers who are able to observe or modify traffic between Salt minions and the legitimate Salt master.

A tool was included in 0.15.1 to assist in mass key regeneration, the manage.regen_keys runner.

This issue affects all known versions of Salt.

This issue was reported by Ronald Volgers.

Patch

The issue is fixed in Salt 0.15.1. Updated packages are available in the usual locations.

Specific commits:

https://github.com/saltstack/salt/commit/5dd304276ba5745ec21fc1e6686a0b28da29e6fc

Command Injection Via ext_pillar

Arbitrary shell commands could be executed on the master by an authenticated minion through options passed when requesting a pillar.

Ext pillar options have been restricted to only allow safe external pillars to be called when prompted by the minion.

This issue affects Salt versions from 0.14.0 to 0.15.0.

This issue was reported by Ronald Volgers.

Patch

The issue is fixed in Salt 0.15.1. Updated packages are available in the usual locations.

Specific commits:

https://github.com/saltstack/salt/commit/43d8c16bd26159d827d1a945c83ac28159ec5865

20.2.88 Salt 0.15.2 Release Notes

release 2013-05-29

20.2.89 Salt 0.15.3 Release Notes

release 2013-06-01

20.2.90 Salt 0.16.0 Release Notes

release 2013-07-01

The 0.16.0 release is an exciting one, with new features in master redundancy, and a new, powerful requisite.

Major Features

Multi-Master

This new capability allows for a minion to be actively connected to multiple salt masters at the same time. This allows for multiple masters to send out commands to minions and for minions to automatically reconnect to masters that have gone down. A tutorial is available to help get started here:

Multi Master Tutorial

Prereq, the New Requisite

The new *prereq* requisite is very powerful! It allows for states to execute based on a state that is expected to make changes in the future. This allows for a change on the system to be preempted by another execution. A good example is needing to shut down a service before modifying files associated with it, allowing, for instance, a webserver to be shut down allowing a load balancer to stop sending requests while server side code is updated. In this case, the prereq will only run if changes are expected to happen in the prerequired state, and the prerequired state will always run after the prereq state and only if the prereq state succeeds.

Peer System Improvements

The peer system has been revamped to make it more reliable, faster, and like the rest of Salt, async. The peer calls when an updated minion and master are used together will be much faster!

Relative Includes

The ability to include an sls relative to the defined sls has been added, the new syntax id documented here:

Includes

More State Output Options

The `state_output` option in the past only supported *full* and *terse*, 0.16.0 add the *mixed* and *changes* modes further refining how states are sent to users' eyes.

Improved Windows Support

Support for Salt on Windows continues to improve. Software management on Windows has become more seamless with Linux/UNIX/BSD software management. Installed software is now recognized by the short names defined in the *repository SLS*. This makes it possible to run `salt '*' pkg.version firefox` and get back results from Windows and non-Windows minions alike.

When templating files on Windows, Salt will now correctly use Windows appropriate line endings. This makes it much easier to edit and consume files on Windows.

When using the cmd state the `shell` option now allows for specifying Windows Powershell as an alternate shell to execute cmd.run and cmd.script. This opens up Salt to all the power of Windows Powershell and its advanced Windows management capabilities.

Several fixes and optimizations were added for the Windows networking modules, especially when working with IPv6.

A system module was added that makes it easy to restart and shutdown Windows minions.

The Salt Minion will now look for its config file in `c:\salt\conf` by default. This means that it's no longer necessary to specify the `-c` option to specify the location of the config file when starting the Salt Minion on Windows in a terminal.

Multiple Targets for pkg.removed, pkg.purged States

Both *`pkg.removed`* and *`pkg.purged`* now support the `pkgs` argument, which allow for multiple packages to be targeted in a single state. This, as in *`pkg.installed`*, helps speed up these states by reducing the number of times that the package management tools (apt, yum, etc.) need to be run.

Random Times in Cron States

The temporal parameters in *`cron.present`* states (minute, hour, etc.) can now be randomized by using `random` instead of a specific value. For example, by using the `random` keyword in the `minute` parameter of a cron state, the same cron job can be pushed to hundreds or thousands of hosts, and they would each use a randomly-generated minute. This can be helpful when the cron job accesses a network resource, and it is not desirable for all hosts to run the job concurrently.

```
/path/to/cron/script:
  cron.present:
    - user: root
    - minute: random
    - hour: 2
```

Since Salt assumes a value of `*` for unspecified temporal parameters, adding a parameter to the state and setting it to `random` will change that value from `*` to a randomized numeric value. However, if that field in the cron entry on the minion already contains a numeric value, then using the `random` keyword will not modify it.

Confirmation Prompt on Key Acceptance

When accepting new keys with `salt-key -a minion-id` or `salt-key -A`, there is now a prompt that will show the affected keys and ask for confirmation before proceeding. This prompt can be bypassed using the `-y` or `--yes` command line argument, as with other `salt-key` commands.

Support for Setting Password Hashes on BSD Minions

FreeBSD, NetBSD, and OpenBSD all now support setting passwords in *`user.present`* states.

20.2.91 Salt 0.16.1 Release Notes

release 2013-07-29

20.2.92 Salt 0.16.2 Release Notes

release 2013-08-01

Version 0.16.2 is a bugfix release for *0.16.0*, and contains a number of fixes.

Windows

- Only allow Administrator's group and SYSTEM user access to C:\salt. This eliminates a race condition where a non-admin user could modify a template or managed file before it is executed by the minion (which is running as an elevated user), thus avoiding a potential escalation of privileges. (issue 6361)

Grains

- Fixed detection of `virtual` grain on OpenVZ hardware nodes
- Gracefully handle lsb_release data when it is enclosed in quotes
- LSB grains are now prefixed with `lsb_distrib_` instead of simply `lsb_`. The old naming is not preserved, so SLS may be affected.
- Improved grains detection on MacOS

Pillar

- Don't try to load *`git_pillar`* if not enabled in master config (issue 6052)
- Functions *`pillar.item`* and *`pillar.items`* added for parity with *`grains.item`*/*`grains.items`*. The old function `pillar.data` is preserved for backwards compatibility.
- Fixed minion traceback when Pillar SLS is malformed (issue 5910)

Peer Publishing

- More gracefully handle improperly quoted publish commands (issue 5958)
- Fixed traceback when timeout specified via the CLI fo `publish.publish`, `publish.full_data` (issue 5959)
- Fixed unintended change in output of `publish.publish` (issue 5928)

Minion

- Fixed salt-key usage in minionswarm script
- Quieted warning about **SALT_MINION_CONFIG** environment variable on minion startup and for CLI commands run via `salt-call` (issue 5956)
- Added minion config parameter `random_reauth_delay` to stagger re-auth attempts when the minion is waiting for the master to approve its public key. This helps prevent SYN flooding in larger environments.

User/Group Management

- Implement previously-ignored `unique` option for `user.present` states in FreeBSD
- Report in state output when a `group.present` state attempts to use a gid in use by another group
- Fixed regression that prevents a `user.present` state to set the password hash to the system default (i.e. an unset password)
- Fixed multiple `group.present` states with the same group (issue 6439)

File Management

- Fixed file.mkdir setting incorrect permissions (issue 6033)
- Fixed cleanup of source files for templates when `/tmp` is in file_roots (issue 6118)
- Fixed caching of zero-byte files when a non-empty file was previously cached at the same path
- Added HTTP authentication support to the cp module (issue 5641)
- Diffs are now suppressed when binary files are changed

Package/Repository Management

- Fixed traceback when there is only one target for `pkg.latest` states
- Fixed regression in detection of virtual packages (apt)
- Limit number of pkg database refreshes to once per `state.sls`/`state.highstate`
- YUM: Allow 32-bit packages with arches other than i686 to be managed on 64-bit systems (issue 6299)
- Fixed incorrect reporting in pkgrepo.managed states (issue 5517)
- Fixed 32-bit binary package installs on 64-bit RHEL-based distros, and added proper support for 32-bit packages on 64-bit Debian-based distros (issue 6303)
- Fixed issue where requisites were inadvertently being put into YUM repo files (issue 6471)

Service Management

- Fixed inaccurate reporting of results in `service.running` states when the service fails to start (issue 5894)
- Fixed handling of custom initscripts in RHEL-based distros so that they are immediately available, negating the need for a second state run to manage the service that the initscript controls

Networking

- Function network.hwaddr renamed to `network.hw_addr` to match `network.ip_addrs` and `network.ip_addrs6`. All three functions also now work without the underscore in the name, as well.
- Fixed traceback in `bridge.show` when interface is not present (issue 6326)

SSH

- Fixed incorrect result reporting for some `ssh_known_hosts.present` states
- Fixed inaccurate reporting when `ssh_auth.present` states are run with `test=True`, when rsa/dss is used for the `enc` param instead of ssh-rsa/ssh-dss (issue 5374)

pip

- Properly handle `-f` lines in pip freeze output
- Fixed regression in pip.installed states with specifying a requirements file (issue 6003)
- Fixed use of `editable` argument in `pip.installed` states (issue 6025)
- Deprecated `runas` parameter in execution function calls, in favor of `user`

MySQL

- Allow specification of `MySQL` connection arguments via the CLI, overriding/bypassing minion config params
- Allow `mysql_user.present` states to set a passwordless login (issue 5550)
- Fixed endless loop when `mysql.processlist` is run (issue 6297)

PostgreSQL

- Fixed traceback in `postgres.user_list` (issue 6352)

Miscellaneous

- Don't allow `npm states` to be used if `npm module` is not available
- Fixed `alternatives.install` states for which the target is a symlink (issue 6162)
- Fixed traceback in `sysbench module` (issue 6175)
- Fixed traceback in job cache
- Fixed tempfile cleanup for windows
- Fixed issue where SLS files using the `pydsl renderer` were not being run

- Fixed issue where returners were being passed incorrect information (issue 5518)
- Fixed traceback when numeric args are passed to `cmd.script` states
- Fixed bug causing `cp.get_dir` to return more directories than expected (issue 6048)
- Fixed traceback when `supervisord.running` states are run with `test=True` (issue 6053)
- Fixed tracebacks when Salt encounters problems running rbenv (issue 5888)
- Only make the `monit module` available if monit binary is present (issue 5871)
- Fixed incorrect behavior of `img.mount_image`
- Fixed traceback in `tomcat.deploy_war` in Windows
- Don't re-write /etc/fstab if mount fails
- Fixed tracebacks when Salt encounters problems running gem (issue 5886)
- Fixed incorrect behavior of `selinux.boolean` states (issue 5912)
- `RabbitMQ`: Quote passwords to avoid symbols being interpolated by the shell (issue 6338)
- Fixed tracebacks in `extfs.mkfs` and `extfs.tune` (issue 6462)
- Fixed a regression with the `module.run` state where the `m_name` and `m_fun` arguments were being ignored (issue 6464)

20.2.93 Salt 0.16.3 Release Notes

release 2013-08-09

Version 0.16.3 is another bugfix release for *0.16.0*. The changes include:

- Various documentation fixes
- Fix proc directory regression (issue 6502)
- Properly detect Linaro Linux (issue 6496)
- Fix regressions in `mount.mounted` (issue 6522, issue 6545)
- Skip malformed state requisites (issue 6521)
- Fix regression in gitfs from bad import
- Fix for watching prereq states (including recursive requisite error) (issue 6057)
- Fix mod_watch not overriding prereq (issue 6520)
- Don't allow functions which compile states to be called within states (issue 5623)
- Return error for malformed top.sls (issue 6544)
- Fix traceback in `mysql.query`
- Fix regression in binary package installation for 64-bit packages on Debian-based Linux distros (issue 6563)
- Fix traceback caused by running `cp.push` without having set `file_recv` in the master config file
- Fix scheduler configuration in pillar (issue 6201)

20.2.94 Salt 0.16.4 Release Notes

release 2013-09-07

Version 0.16.4 is another bugfix release for *0.16.0*, likely to be the last before 0.17.0 is released. The changes include:

- Multiple documentation improvements/additions
- Added the `osfinger` and `osarch` grains
- Properly handle 32-bit packages for debian32 on x86_64 (issue 6607)
- Fix regression in yum package installation in CentOS 5 (issue 6677)
- Fix bug in `hg.latest` state that would erroneously delete directories (issue 6661)
- Fix bug related to pid not existing for `ps.top` (issue 6679)
- Fix regression in `MySQL returner` (issue 6695)
- Fix IP addresses grains (`ipv4` and `ipv6`) to include all addresses (issue 6656)
- Fix regression preventing authenticated FTP (issue 6733)
- Fix setting password for windows users (issue 6824)
- Fix `file.contains` on values YAML parses as non-string (issue 6817)
- Fix `file.get_gid`, `file.get_uid`, and `file.chown` for broken symlinks (issue 6826)
- Fix comment for service reloads in service state (issue 6851)

20.2.95 Salt 0.17.0 Release Notes

release 2013-09-26

The 0.17.0 release is a very exciting release of Salt, this brings to Salt some very powerful new features and advances. The advances range from the state system to the test suite, covering new transport capabilities and making states easier and more powerful, to extending Salt Virt and much more!

The 0.17.0 release will also be the last release of Salt to follow the old 0.XX.X numbering system, the next release of Salt will change the numbering to be date based following this format:

<Year>.<Month>.<Minor>

So if the release happens in November of 2013 the number will be 13.11.0, the first bugfix release will be 13.11.1 and so forth.

Major Features

Halite

The new Halite web GUI is now available on PyPI. A great deal of work has been put into Halite to make it fully event driven and amazingly fast. The Halite UI can be started from within the Salt Master (after being installed from PyPI), or standalone, and does not require an external database to run. It is very lightweight!

This initial release of Halite is primarily the framework for the UI and the communication systems, making it easy to extend and build the UI up. It presently supports watching the event bus and firing commands over Salt.

At this time, Halite is not available as a package, but installation documentation is available at: http://docs.saltstack.com/topics/tutorials/halite.html

Halite is, like the rest of Salt, Open Source!

Much more will be coming in the future of Halite!

Salt SSH

The new `salt-ssh` command has been added to Salt. This system allows for remote execution and states to be run over ssh. The benefit here being, that salt can run relying only on the ssh agent, rather than requiring a minion to be deployed.

The `salt-ssh` system runs states in a compatible way as Salt and states created and run with salt-ssh can be moved over to a standard salt deployment without modification.

Since this is the initial release of salt-ssh, there is plenty of room for improvement, but it is fully operational, not just a bootstrap tool.

Rosters

Salt is designed to have the minions be aware of the master and the master does not need to be aware of the location of the minions. The new salt roster system was created and designed to facilitate listing the targets for salt-ssh.

The roster system, like most of Salt, is a plugin system, allowing for the list of systems to target to be derived from any pluggable backend. The rosters shipping with 0.17.0 are flat and scan. Flat is a file which is read in via the salt render system and the scan roster does simple network scanning to discover ssh servers.

State Auto Order

This is a major change in how states are evaluated in Salt. State Auto Order is a new feature that makes states get evaluated and executed in the order in which they are defined in the sls file. This feature makes it very easy to see the finite order in which things will be executed, making Salt now, fully imperative AND fully declarative.

The requisite system still takes precedence over the order in which states are defined, so no existing states should break with this change. But this new feature can be turned off by setting `state_auto_order: False` in the master config, thus reverting to the old lexicographical order.

state.sls Runner

The `state.sls` runner has been created to allow for a more powerful system for orchestrating state runs and function calls across the salt minions. This new system uses the state system for organizing executions.

This allows for states to be defined that are executed on the master to call states on minions via `salt-run state.sls`.

Salt Thin

Salt Thin is an exciting new component of Salt, this is the ability to execute Salt routines without any transport mechanisms installed, it is a pure python subset of Salt.

Salt Thin does not have any networking capability, but can be dropped into any system with Python installed and then `salt-call` can be called directly. The Salt Thin system, is used by the `salt-ssh` command, but can still be used to just drop salt somewhere for easy use.

Event Namespacing

Events have been updated to be much more flexible. The tags in events have all been namespaced allowing easier tracking of event names.

Mercurial Fileserver Backend

The popular git fileserver backend has been joined by the mercurial fileserver backend, allowing the state tree to be managed entirely via mercurial.

External Logging Handlers

The external logging handler system allows for Salt to directly hook into any external logging system. Currently supported are sentry and logstash.

Jenkins Testing

The testing systems in Salt have been greatly enhanced, tests for salt are now executed, via jenkins.saltstack.com, across many supported platforms. Jenkins calls out to salt-cloud to create virtual machines on Rackspace, then the minion on the virtual machine checks into the master running on Jenkins where a state run is executed that sets up the minion to run tests and executes the test suite.

This now automates the sequence of running platform tests and allows for continuous destructive tests to be run.

Salt Testing Project

The testing libraries for salt have been moved out of the main salt code base and into a standalone codebase. This has been done to ease the use of the testing systems being used in salt based projects other than Salt itself.

StormPath External Authentication

The external auth system now supports the fantastic Stormpath cloud based authentication system.

LXC Support

Extensive additions have been added to Salt for LXC support. This included the backend libs for managing LXC containers. Addition into the salt-virt system is still in the works.

macOS User/Group Support

Salt is now able to manage users and groups on Minions running macOS. However, at this time user passwords cannot be managed.

Django ORM External Pillar

Pillar data can now be derived from Django managed databases.

Fixes from RC to release

- Multiple documentation fixes
- Add multiple source files + templating for `file.append` (issue 6905)
- Support sysctl configuration files in systemd>=207 (issue 7351)
- Add `file.search` and `file.replace`
- Fix cross-calling execution functions in provider overrides
- Fix locale override for postgres (issue 4543)
- Fix Raspbian identification for service/pkg support (issue 7371)
- Fix `cp.push` file corruption (issue 6495)
- Fix ALT Linux password hash specification (issue 3474)
- Multiple salt-ssh-related fixes and improvements

20.2.96 Salt 0.17.1 Release Notes

release 2013-10-17

Note: THIS RELEASE IS NOT COMPATIBLE WITH PREVIOUS VERSIONS. If you update your master to 0.17.1, you must update your minions as well. Sorry for the inconvenience -- this is a result of one of the security fixes listed below.

The 0.17.1 release comes with a number of improvements to salt-ssh, many bugfixes, and a number of security updates.

Salt SSH has been improved to be faster, more featureful and more secure. Since the original release of Salt SSH was primarily a proof of concept, it has been very exciting to see its rapid adoption. We appreciate the willingness of security experts to review Salt SSH and help discover oversights and ensure that security issues only exist for such a tiny window of time.

SSH Enhancements

Shell Improvements

Improvements to Salt SSH's communication have been added that improve routine execution regardless of the target system's login shell.

Performance

Deployment of routines is now faster and takes fewer commands to execute.

Security Updates

Be advised that these security issues all apply to a small subset of Salt users and mostly apply to Salt SSH.

Insufficient Argument Validation

This issue allowed for a user with limited privileges to embed executions inside of routines to execute routines that should be restricted. This applies to users using external auth or client ACL and opening up specific routines.

Be advised that these patches address the direct issue. Additional commits have been applied to help mitigate this issue from resurfacing.

CVE

CVE-2013-4435

Affected Versions

0.15.0 - 0.17.0

Patches

YAML Calling Unsafe Loading Routine

It has been argued that this is not a valid security issue, as the YAML loading that was happening was only being called after an initial gateway filter in Salt has already safely loaded the YAML and would fail if non-safe routines were embedded. Nonetheless, the CVE was filed and patches applied.

CVE

CVE-2013-4438

Fix Reference

Version 0.17.1 is the first bugfix release for *0.17.0*. The changes include:

- Fix symbolic links in thin.tgz (issue 7482)
- Pass env through to file.patch state (issue 7452)
- Service provider fixes and reporting improvements (issue 7361)
- Add `--priv` option for specifying salt-ssh private key
- Fix salt-thin's salt-call on setuptools installations (issue 7516)
- Fix salt-ssh to support passwords with spaces (issue 7480)
- Fix regression in wildcard includes (issue 7455)
- Fix salt-call outputter regression (issue 7456)
- Fix custom returner support for startup states (issue 7540)
- Fix value handling in augeas (issue 7605)
- Fix regression in apt (issue 7624)
- Fix minion ID guessing to use `socket.getfqdn()` first (issue 7558)
- Add minion ID caching (issue 7558)
- Fix salt-key race condition (issue 7304)
- Add `--include-all` flag to salt-key (issue 7399)
- Fix custom grains in pillar (part of issue 5716, issue 6083)
- Fix race condition in salt-key (issue 7304)
- Fix regression in minion ID guessing, prioritize `socket.getfqdn()` (issue 7558)
- Cache minion ID on first guess (issue 7558)
- Allow trailing slash in `file.directory` state
- Fix reporting of file_roots in pillar return (issue 5449 and issue 5951)
- Remove pillar matching for mine.get (issue 7197)
- Sanitize args for multiple execution modules
- Fix yumpkg mod_repo functions to filter hidden args (issue 7656)
- Fix conflicting IDs in state includes (issue 7526)
- Fix mysql_grants.absent string formatting issue (issue 7827)
- Fix postgres.version so it won't return None (issue 7695)
- Fix for trailing slashes in mount.mounted state
- Fix rogue AttributErrors in the outputter system (issue 7845)
- Fix for incorrect ssh key encodings resulting in incorrect key added (issue 7718)

- Fix for pillar/grains naming regression in python renderer (issue 7693)
- Fix args/kwargs handling in the scheduler (issue 7422)
- Fix logfile handling for *file://*, *tcp://*, and *udp://* (issue 7754)
- Fix error handling in config file parsing (issue 6714)
- Fix RVM using sudo when running as non-root user (issue 2193)
- Fix client ACL and underlying logging bugs (issue 7706)
- Fix scheduler bug with returner (issue 7367)
- Fix user management bug related to default groups (issue 7690)
- Fix various salt-ssh bugs (issue 7528)
- Many various documentation fixes

20.2.97 Salt 0.17.2 Release Notes

release 2013-11-14

Version 0.17.2 is another bugfix release for *0.17.0*. The changes include:

- Add ability to delete key with grains.delval (issue 7872)
- Fix possible state compiler stack trace (issue 5767)
- Fix architecture regression in yumpkg (issue 7813)
- Use correct `ps` on Debian to prevent truncating (issue 5646)
- Fix grains targeting for new grains (issue 5737)
- Fix bug with merging in git_pillar (issue 6992)
- Fix print_jobs duplicate results
- Fix apt version specification for pkg.install
- Fix possible KeyError from ext_job_cache missing option
- Fix auto_order for `-names` states (issue 7649)
- Fix regression in new gitfs installs (directory not found error)
- Fix escape pipe issue on Windows for file.recurse (issue 7967)
- Fix fileclient in case of master restart (issue 7987)
- Try to output warning if CLI command malformed (issue 6538)
- Fix `--out=quiet` to actually be quiet (issue 8000)
- Fix for state.sls in salt-ssh (issue 7991)
- Fix for MySQL grants ordering issue (issue 5817)
- Fix traceback for certain missing CLI args (issue 8016)
- Add ability to disable lspci queries on master (issue 4906)
- Fail if sls defined in topfile does not exist (issue 5998)
- Add ability to downgrade MySQL grants (issue 6606)
- Fix ssh_auth.absent traceback (issue 8043)

- Add upstart detection for Debian/Raspbian (issue 8039)
- Fix ID-related issues (issue 8052, issue 8050, and others)
- Fix for jinja rendering issues (issue 8066 and issue 8079)
- Fix argument parsing in salt-ssh (issue 7928)
- Fix some GPU detection instances (issue 6945)
- Fix bug preventing includes from other environments in SLS files
- Fix for kwargs with dashes (issue 8102)
- Fix salt.utils.which for windows `.exe' (issue 7904)
- Fix apache.adduser without apachectl (issue 8123)
- Fix issue with evaluating `test` kwarg in states (issue 7788)
- Fix regression in `salt.client.Caller()` (issue 8078)
- Fix apt-key silent failure
- Fix bug where cmd.script would try to run even if caching failed (issue 7601)
- Fix apt `pkg.latest` regression (issue 8067)
- Fix for mine data not being updated (issue 8144)
- Fix for noarch packages in yum
- Fix a Xen detection edge case (issue 7839)
- Fix windows `__opts__` dictionary persistence (issue 7714)
- Fix version generation for when it's part of another git repo (issue 8090)
- Fix _handle_iorder stacktrace so that the real syntax error is shown (issue 8114 and issue 7905)
- Fix `git.latest` state when a commit SHA is used (issue 8163)
- Fix various small bugs in yumpkg.py (issue 8201)
- Fix for specifying identify file in git.latest (issue 8094)
- Fix for `--output-file` CLI arg (issue 8205)
- Add ability to specify shutdown time for system.shutdown (issue 7833)
- Fix for salt version using non-salt git repo info (issue 8266)
- Add additional hints at impact of `pkgrepo` states when `test=True` (issue 8247)
- Fix for salt-ssh files not being owned by root (issue 8216)
- Fix retry logic and error handling in fileserver (related to issue 7755)
- Fix file.replace with `test=True` (issue 8279)
- Add flag for limiting file traversal in fileserver (issue 6928)
- Fix for extra mine processes (issue 5729)
- Fix for unloading custom modules (issue 7691)
- Fix for salt-ssh opts (issue 8005 and issue 8271)
- Fix compound matcher for grains (issue 7944)
- Improve error reporting in ebuild module (related to issue 5393)

- Add `dir_mode` to `file.managed` (issue 7860)
- Improve traceroute support for FreeBSD and macOS (issue 4927)
- Fix for matching minions under syndics (issue 7671)
- Improve exception handling for missing ID (issue 8259)
- Fix grain mismatch for ScientificLinux (issue 8338)
- Add configuration option for minion_id_caching
- Fix open mode auth errors (issue 8402)

20.2.98 Salt 0.17.3 Release Notes

release 2013-12-08

Note: 0.17.3 had some regressions which were promptly fixed in the 0.17.4 release. Please use 0.17.4 instead.

Version 0.17.3 is another bugfix release for *0.17.0*. The changes include:

- Fix some jinja render errors (issue 8418)
- Fix `file.replace` state changing file ownership (issue 8399)
- Fix state ordering with the PyDSL renderer (issue 8446)
- Fix for new npm version (issue 8517)
- Fix for pip state requiring `name` even with requirements file (issue 8519)
- Fix yum logging to open terminals (issue 3855)
- Add sane maxrunning defaults for scheduler (issue 8563)
- Fix states duplicate key detection (issue 8053)
- Fix SUSE patch level reporting (issue 8428)
- Fix managed file creation umask (issue 8590)
- Fix logstash exception (issue 8635)
- Improve argument exception handling for salt command (issue 8016)
- Fix pecl success reporting (issue 8750)
- Fix launchctl module exceptions (issue 8759)
- Fix argument order in pw_user module
- Add warnings for failing grains (issue 8690)
- Fix hgfs problems caused by connections left open (issue 8811 and issue 8810)
- Add Debian iptables default for iptables-persistent package (issue 8889)
- Fix installation of packages with dots in pkg name (issue 8614)
- Fix noarch package installation on CentOS 6 (issue 8945)
- Fix portage_config.enforce_nice_config (issue 8252)
- Fix salt.util.copyfile umask usage (issue 8590)
- Fix rescheduling of failed jobs (issue 8941)

- Fix pkg on Amazon Linux (uses yumpkg5 now) (issue 8226)
- Fix conflicting options in postgres module (issue 8717)
- Fix ps modules for psutil >= 0.3.0 (issue 7432)
- Fix postgres module to return False on failure (issue 8778)
- Fix argument passing for args with pound signs (issue 8585)
- Fix pid of salt CLi command showing in status.pid output (issue 8720)
- Fix rvm to run gem as the correct user (issue 8951)
- Fix namespace issue in win_file module (issue 9060)
- Fix masterless state paths on windows (issue 9021)
- Fix timeout option in master config (issue 9040)

20.2.99 Salt 0.17.4 Release Notes

release 2013-12-10

Version 0.17.4 is another bugfix release for *0.17.0*. The changes include:

- Fix file.replace bug when replacement str is numeric (issue 9101)
- Fix regression in file.managed (issue 9131)
- Prevent traceback when job is None. (issue 9145)

20.2.100 Salt 0.17.5 Release Notes

release 2014-01-27

Version 0.17.5 is another bugfix release for *0.17.0*. The changes include:

- Fix `user.present` states with non-string fullname (issue 9085)
- Fix `virt.init` return value on failure (issue 6870)
- Fix reporting of `file.blockreplace` state when `test=True`
- Fix `network.interfaces` when used in cron (issue 7990)
- Fix bug in pkgrepo when switching to/from mirrorlist-based repo def (issue 9121)
- Fix infinite recursion when cache file is corrupted
- Add checking for rev and mirror/bare args in `git.latest` (issue 9107)
- Add `cmd.watch` alias (points to `cmd.wait`) (issue 8612)
- Fix stacktrace when prereq is not formed as a list (issue 8235)
- Fix stdin issue with lvdisplay command (issue 9128)
- Add pre-check function for range matcher (issue 9236)
- Add exception handling for psutil for processes that go missing (issue 9274)
- Allow `_in` requisites to match both on ID and name (issue 9061)
- Fix multiple client timeout issues (issue 7157 and issue 9302, probably others)
- Fix `ZMQError: Operation cannot be accomplished in current state` errors (issue 6306)

- Multiple optimization in minion auth routines
- Clarify logs for minion ID caching

20.2.101 Salt 0.6.0 release notes

The Salt remote execution manager has reached initial functionality! Salt is a management application which can be used to execute commands on remote sets of servers.

The whole idea behind Salt is to create a system where a group of servers can be remotely controlled from a single master, not only can commands be executed on remote systems, but salt can also be used to gather information about your server environment.

Unlike similar systems, like Func and MCollective, Salt is extremely simple to setup and use, the entire application is contained in a single package, and the master and minion daemons require no running dependencies in the way that Func requires Certmaster and MCollective requires activeMQ.

Salt also manages authentication and encryption. Rather than using SSL for encryption, salt manages encryption on a payload level, so the data sent across the network is encrypted with fast AES encryption, and authentication uses RSA keys. This means that Salt is fast, secure, and very efficient.

Messaging in Salt is executed with ZeroMQ, so the message passing interface is built into salt and does not require an external ZeroMQ server. This also adds speed to Salt since there is no additional bloat on the networking layer, and ZeroMQ has already proven itself as a very fast networking system.

The remote execution in Salt is ``Lazy Execution'', in that once the command is sent the requesting network connection is closed. This makes it easier to detach the execution from the calling process on the master, it also means that replies are cached, so that information gathered from historic commands can be queried in the future.

Salt also allows users to make execution modules in Python. Writers of these modules should also be pleased to know that they have access to the impressive information gathered from PuppetLabs' Facter application, making Salt module more flexible. In the future I hope to also allow Salt to group servers based on Facter information as well.

All in all Salt is fast, efficient, and clean, can be used from a simple command line client or through an API, uses message queue technology to make network execution extremely fast, and encryption is handled in a very fast and efficient manner. Salt is also VERY easy to use and VERY easy to extend.

You can find the source code for Salt on my GitHub page, I have also set up a few wiki pages explaining how to use and set up Salt. If you are using Arch Linux there is a package available in the Arch Linux AUR.

Salt 0.6.0 Source: https://cloud.github.com/downloads/saltstack/salt/salt-0.6.0.tar.gz

GitHub page: https://github.com/saltstack/salt

Wiki: https://github.com/saltstack/salt/wiki

Arch Linux Package: https://aur.archlinux.org/packages/salt-git/

I am very open to contributions, for instance I need packages for more Linux distributions as well as BSD packages and testers.

Give Salt a try, this is the initial release and is not a 1.0 quality release, but it has been working well for me! I am eager to get your feedback!

20.2.102 Salt 0.7.0 release notes

I am pleased to announce the release of Salt 0.7.0!

This release marks what is the first stable release of salt, 0.7.0 should be suitable for general use.

0.7.0 Brings the following new features to Salt:

- Integration with Facter data from puppet labs
- Allow for matching minions from the salt client via Facter information
- Minion job threading, many jobs can be executed from the master at once
- Preview of master clustering support - Still experimental
- Introduce new minion modules for stats, virtualization, service management and more
- Add extensive logging to the master and minion daemons
- Add sys.reload_functions for dynamic function reloading
- Greatly improve authentication
- Introduce the saltkey command for managing public keys
- Begin backend development preparatory to introducing butter
- Addition of man pages for the core commands
- Extended and cleaned configuration

0.7.0 Fixes the following major bugs:

- Fix crash in minions when matching failed
- Fix configuration file lookups for the local client
- Repair communication bugs in encryption
- Numerous fixes in the minion modules

The next release of Salt should see the following features:

- Stabilize the cluster support
- Introduce a remote client for salt command tiers
- salt-ftp system for distributed file copies
- Initial support for ``butter''

Coming up next is a higher level management framework for salt called Butter. I want salt to stay as a simple and effective communication framework, and allow for more complicated executions to be managed via Butter.

Right now Butter is being developed to act as a cloud controller using salt as the communication layer, but features like system monitoring and advanced configuration control (a puppet manager) are also in the pipe.

Special thanks to Joseph Hall for the status and network modules, and thanks to Matthias Teege for tracking down some configuration bugs!

Salt can be downloaded from the following locations;

Source Tarball:

https://cloud.github.com/downloads/saltstack/salt/salt-0.7.0.tar.gz

Arch Linux Package:

https://aur.archlinux.org/packages/salt-git/

Please enjoy the latest Salt release!

20.2.103 Salt 0.8.0 release notes

Salt 0.8.0 is ready for general consumption! The source tarball is available on GitHub for download:

https://cloud.github.com/downloads/saltstack/salt/salt-0.8.0.tar.gz

A lot of work has gone into salt since the last release just 2 weeks ago, and salt has improved a great deal. A swath of new features are here along with performance and threading improvements!

The main new features of salt 0.8.0 are:

Salt-cp

Cython minion modules

Dynamic returners

Faster return handling

Lowered required Python version to 2.6

Advanced minion threading

Configurable minion modules

Salt-cp

The salt-cp command introduces the ability to copy simple files via salt to targeted servers. Using salt-cp is very simple, just call salt-cp with a target specification, the source file(s) and where to copy the files on the minions. For instance:

salt-cp '*' /etc/hosts /etc/hosts

Will copy the local /etc/hosts file to all of the minions.

Salt-cp is very young, in the future more advanced features will be added, and the functionality will much more closely resemble the cp command.

Cython minion modules

Cython is an amazing tool used to compile Python modules down to c. This is arguably the fastest way to run Python code, and since pyzmq requires cython, adding support to salt for cython adds no new dependencies.

Cython minion modules allow minion modules to be written in cython and therefore executed in compiled c. Simply write the salt module in cython and use the file extension ".pyx" and the minion module will be compiled when the minion is started. An example cython module is included in the main distribution called cytest.pyx:

https://github.com/saltstack/salt/blob/develop/salt/modules/cytest.pyx

Dynamic Returners

By default salt returns command data back to the salt master, but now salt can return command data to any system. This is enabled via the new returners modules feature for salt. The returners modules take the return data and sends it to a specific module. The returner modules work like minion modules, so any returner can be added to the minions.

This means that a custom data returner can be added to communicate the return data so anything from MySQL, Redis, MongoDB, and more!

There are 2 simple stock returners in the returners directory:

https://github.com/saltstack/salt/blob/develop/salt/returners

The documentation on writing returners will be added to the wiki shortly, and returners can be written in pure Python, or in cython.

Configurable Minion Modules

Minion modules may need to be configured, now the options passed to the minion configuration file can be accessed inside of the minion modules via the __opt__ dict.

Information on how to use this simple addition has been added to the wiki: *Writing modules*

The test module has an example of using the __opts__ dict, and how to set default options:

https://github.com/saltstack/salt/blob/develop/salt/modules/test.py

Advanced Minion Threading

In 0.7.0 the minion would block after receiving a command from the master, now the minion will spawn a thread or multiprocess. By default Python threads are used because for general use they have proved to be faster, but the minion can now be configured to use the Python multiprocessing module instead. Using multiprocessing will cause executions that are CPU bound or would otherwise exploit the negative aspects of the Python GIL to run faster and more reliably, but simple calls will still be faster with Python threading. The configuration option can be found in the minion configuration file:

https://github.com/saltstack/salt/blob/develop/conf/minion

Lowered Supported Python to 2.6

The requirement for Python 2.7 has been removed to support Python 2.6. I have received requests to take the minimum Python version back to 2.4, but unfortunately this will not be possible, since the ZeroMQ Python bindings do not support Python 2.4.

Salt 0.8.0 is a very major update, it also changes the network protocol slightly which makes communication with older salt daemons impossible, your master and minions need to be upgraded together!

I could use some help bringing salt to the people! Right now I only have packages for Arch Linux, Fedora 14 and Gentoo. We need packages for Debian and people willing to help test on more platforms. We also need help writing more minion modules and returner modules. If you want to contribute to salt please hop on the mailing list and send in patches, make a fork on GitHub and send in pull requests! If you want to help but are not sure where you can, please email me directly or post tot he mailing list!

I hope you enjoy salt, while it is not yet 1.0 salt is completely viable and usable!

-Thomas S. Hatch

20.2.104 Salt 0.8.7 release notes

It has been a month since salt 0.8.0, and it has been a long month! But Salt is still coming along strong. 0.8.7 has a lot of changes and a lot of updates. This update makes Salt's ZeroMQ back end better, strips Facter from the dependencies, and introduces interfaces to handle more capabilities.

Many of the major updates are in the background, but the changes should shine through to the surface. A number of the new features are still a little thin, but the back end to support expansion is in place.

I also recently gave a presentation to the Utah Python users group in Salt Lake City, the slides from this presentation are available here: https://cloud.github.com/downloads/saltstack/salt/Salt.pdf

The video from this presentation will be available shortly.

The major new features and changes in Salt 0.8.7 are:

- Revamp ZeroMQ topology on the master for better scalability
- State enforcement
- Dynamic state enforcement managers
- Extract the module loader into salt.loader
- Make Job ids more granular
- Replace Facter functionality with the new salt grains interface
- Support for "virtual" salt modules
- Introduce the salt-call command
- Better debugging for minion modules

The new ZeroMQ topology allows for better scalability, this will be required by the need to execute massive file transfers to multiple machines in parallel and state management. The new ZeroMQ topology is available in the aforementioned presentation.

0.8.7 introduces the capability to declare states, this is similar to the capabilities of Puppet. States in salt are declared via state data structures. This system is very young, but the core feature set is available. Salt states work around rendering files which represent Salt high data. More on the Salt state system will be documented in the near future.

The system for loading salt modules has been pulled out of the minion class to be a standalone module, this has enabled more dynamic loading of Salt modules and enables many of the updates in 0.8.7 –

https://github.com/saltstack/salt/blob/develop/salt/loader.py

Salt Job ids are now microsecond precise, this was needed to repair a race condition unveiled by the speed improvements in the new ZeroMQ topology.

The new grains interface replaces the functionality of Facter, the idea behind grains differs from Facter in that the grains are only used for static system data, dynamic data needs to be derived from a call to a salt module. This makes grains much faster to use, since the grains data is generated when the minion starts.

Virtual salt modules allows for a salt module to be presented as something other than its module name. The idea here is that based on information from the minion decisions about which module should be presented can be made. The best example is the pacman module. The pacman module will only load on Arch Linux minions, and will be called pkg. Similarly the yum module will be presented as pkg when the minion starts on a Fedora/RedHat system.

The new salt-call command allows for minion modules to be executed from the minion. This means that on the minion a salt module can be executed, this is a great tool for testing Salt modules. The salt-call command can also be used to view the grains data.

In previous releases when a minion module threw an exception very little data was returned to the master. Now the stack trace from the failure is returned making debugging of minion modules MUCH easier.

Salt is nearing the goal of 1.0, where the core feature set and capability is complete!

Salt 0.8.7 can be downloaded from GitHub here: https://cloud.github.com/downloads/saltstack/salt/salt-0.8.7.tar.gz

-Thomas S Hatch

20.2.105 Salt 0.8.8 release notes

Salt 0.8.8 is here! This release adds a great deal of code and some serious new features. The latest release can be downloaded here: https://cloud.github.com/downloads/saltstack/salt/salt-0.8.8.tar.gz

Improved Documentation has been set up for salt using sphinx thanks to the efforts of Seth House. This new documentation system will act as the back end to the salt website which is still under heavy development. The new sphinx documentation system has also been used to greatly clean up the salt manpages. The salt 7 manpage in particular now contains extensive information which was previously only in the wiki. The new documentation can be found at: http://docs.saltstack.com/ We still have a lot to add, and when the domain is set up I will post another announcement.

More additions have been made to the ZeroMQ setup, particularly in the realm of file transfers. Salt 0.8.8 introduces a built in, stateless, encrypted file server which allows salt minions to download files from the salt master using the same encryption system used for all other salt communications. The main motivation for the salt file server has been to facilitate the new salt state system.

Much of the salt code has been cleaned up and a new cleaner logging system has been introduced thanks to the efforts of Pedro Algarvio. These additions will allow for much more flexible logging to be executed by salt, and fixed a great deal of my poor spelling in the salt docstrings! Pedro Algarvio has also cleaned up the API, making it easier to embed salt into another application.

The biggest addition to salt found in 0.8.8 is the new state system. The salt module system has received a new front end which allows salt to be used as a configuration management system. The configuration management system allows for system configuration to be defined in data structures. The configuration management system, or as it is called in salt, the "salt state system" supports many of the features found in other configuration managers, but allows for system states to be written in a far simpler format, executes at blazing speeds, and operates via the salt minion matching system. The state system also operates within the normal scope of salt, and requires no additional configuration to use.

The salt state system can enforce the following states with many more to come: Packages Files Services Executing commands Hosts

The system used to define the salt states is based on a data structure, the data structure used to define the salt states has been made to be as easy to use as possible. The data structure is defined by default using a YAML file rendered via a Jinja template. This means that the state definition language supports all of the data structures that YAML supports, and all of the programming constructs and logic that Jinja supports. If the user does not like YAML or Jinja the states can be defined in yaml-mako, json-jinja, or json-mako. The system used to render the states is completely dynamic, and any rendering system can be added to the capabilities of Salt, this means that a rendering system that renders XML data in a cheetah template, or whatever you can imagine, can be easily added to the capabilities of salt.

The salt state system also supports isolated environments, as well as matching code from several environments to a single salt minion.

The feature base for Salt has grown quite a bit since my last serious documentation push. As we approach 0.9.0 the goals are becoming very clear, and the documentation needs a lot of work. The main goals for 0.9.0 are to further refine the state system, fix any bugs we find, get Salt running on as many platforms as we can, and get the documentation filled out. There is a lot more to come as Salt moves forward to encapsulate a much larger scope, while maintaining supreme usability and simplicity.

If you would like a more complete overview of Salt please watch the Salt presentation: Slides: https://cloud.github.com/downloads/saltstack/salt/Salt.pdf

-Thomas S Hatch

20.2.106 Salt 0.8.9 Release Notes

Salt 0.8.9 has finally arrived! Unfortunately this is much later than I had hoped to release 0.8.9, life has been very crazy over the last month. But despite challenges, Salt has moved forward!

This release, as expected, adds few new features and many refinements. One of the most exciting aspect of this release is that the development community for salt has grown a great deal and much of the code is from contributors.

Also, I have filled out the documentation a great deal. So information on States is properly documented, and much of the documentation that was out of date has been filled in.

Download!

The Salt source can be downloaded from the salt GitHub site:

https://cloud.github.com/downloads/saltstack/salt/salt-0.8.9.tar.gz

Or from PyPI:

https://pypi.python.org/packages/source/s/salt/salt-0.8.9.tar.gz

Here s the md5sum:

7d5aca4633bc22f59045f59e82f43b56

For instructions on how to set up Salt please see the *Installation* instructions.

New Features

Salt Run

A big feature is the addition of Salt run, the `salt-run` command allows for master side execution modules to be made that gather specific information or execute custom routines from the master.

Documentation for salt-run can be found *here*

Refined Outputters

One problem often complained about in salt was the fact that the output was so messy. Thanks to help from Jeff Schroeder a cleaner interface for the command output for the Salt CLI has been made. This new interface makes adding new printout formats easy and additions to the capabilities of minion modules makes it possible to set the printout mode or `outputter` for functions in minion modules.

Cross Calling Salt Modules

Salt modules can now call each other, the `__salt__` dict has been added to the predefined references in minion modules. This new feature is documented in the *modules documentation*.

Watch Option Added to Salt State System

Now in Salt states you can set the watch option, this will allow watch enabled states to change based on a change in the other defined states. This is similar to subscribe and notify statements in puppet.

Root Dir Option

Travis Cline has added the ability to define the option `root_dir` which allows the salt minion to operate in a subdir. This is a strong move in supporting the minion running as an unprivileged user

Config Files Defined in Variables

Thanks again to Travis Cline, the master and minion configuration file locations can be defined in environment variables now.

New Modules

Quite a few new modules, states, returners, and runners have been made.

New Minion Modules

apt

Support for apt-get has been added, this adds greatly improved Debian and Ubuntu support to Salt!

useradd and groupadd

Support for manipulating users and groups on Unix-like systems.

moosefs

Initial support for reporting on aspects of the distributed file system, MooseFS. For more information on MooseFS please see: http://www.moosefs.org

Thanks to Joseph Hall for his work on MooseFS support.

mount

Manage mounts and the fstab.

puppet

Execute puppet on remote systems.

shadow

Manipulate and manage the user password file.

ssh

Interact with ssh keys.

New States

user and group

Support for managing users and groups in Salt States.

mount

Enforce mounts and the fstab.

New Returners

mongo_return

Send the return information to a MongoDB server.

New Runners

manage

Display minions that are up or down.

20.2.107 Salt 0.9.0 Release Notes

release 2011-08-27

Salt 0.9.0 is here. This is an exciting release, 0.9.0 includes the new network topology features allowing peer salt commands and masters of masters via the syndic interface.

0.9.0 also introduces many more modules, improvements to the API and improvements to the ZeroMQ systems.

Download!

The Salt source can be downloaded from the salt GitHub site:

https://cloud.github.com/downloads/saltstack/salt/salt-0.9.0.tar.gz

Or from PyPI:

https://pypi.python.org/packages/source/s/salt/salt-0.9.0.tar.gz

Here is the md5sum:

9a925da04981e65a0f237f2e77ddab37

For instructions on how to set up Salt please see the *Installation* instructions.

New Features

Salt Syndic

The new *Syndic interface* allows a master to be commanded via another higher level salt master. This is a powerful solution allowing a master control structure to exist, allowing salt to scale to much larger levels then before.

Peer Communication

0.9.0 introduces the capability for a minion to call a publication on the master and receive the return from another set of minions. This allows salt to act as a communication channel between minions and as a general infrastructure message bus.

Peer communication is turned off by default but can be enabled via the `peer` option in the master configuration file. Documentation on the new *Peer interface*.

Easily Extensible API

The minion and master classes have been redesigned to allow for specialized minion and master servers to be easily created. An example on how this is done for the master can be found in the `master.py` salt module:

https://github.com/saltstack/salt/blob/develop/salt/master.py

The `Master` class extends the `SMaster` class and set up the main master server.

The minion functions can now also be easily added to another application via the `SMinion` class, this class can be found in the `minion.py` module:

https://github.com/saltstack/salt/blob/develop/salt/minion.py

Cleaner Key Management

This release changes some of the key naming to allow for multiple master keys to be held based on the type of minion gathering the master key.

The -d option has also been added to the salt-key command allowing for easy removal of accepted public keys.

The --gen-keys option is now available as well for salt-key, this allows for a salt specific RSA key pair to be easily generated from the command line.

Improved 0MQ Master Workers

The 0MQ worker system has been further refined to be faster and more robust. This new system has been able to handle a much larger load than the previous setup. The new system uses the IPC protocol in 0MQ instead of TCP.

New Modules

Quite a few new modules have been made.

New Minion Modules

apache

Work directly with apache servers, great for managing balanced web servers

cron

Read out the contents of a systems crontabs

mdadm

Module to manage raid devices in Linux, appears as the `raid` module

mysql

Gather simple data from MySQL databases

ps

Extensive utilities for managing processes

publish

Used by the peer interface to allow minions to make publications

20.2.108 Salt 0.9.1 Release Notes

release 2011-08-29

20.2.109 Salt 0.9.2 Release Notes

release 2011-09-17

Salt 0.9.2 has arrived! 0.9.2 is primarily a bugfix release, the exciting component in 0.9.2 is greatly improved support for salt states. All of the salt states interfaces have been more thoroughly tested and the new salt-states git repo is growing with example of how to use states.

This release introduces salt states for early developers and testers to start helping us clean up the states interface and make it ready for the world!

0.9.2 also fixes a number of bugs found on Python 2.6.

Download!

The Salt source can be downloaded from the salt GitHub site:

https://cloud.github.com/downloads/saltstack/salt/salt-0.9.2.tar.gz

Or from PyPI:

https://pypi.python.org/packages/source/s/salt/salt-0.9.2.tar.gz

For instructions on how to set up Salt please see the *Installation* instructions.

New Features

Salt-Call Additions

The salt-call command has received an overhaul, it now hooks into the outputter system so command output looks clean, and the logging system has been hooked into salt-call, so the -l option allows the logging output from salt minion functions to be displayed.

The end result is that the salt-call command can execute the state system and return clean output:

```
# salt-call state.highstate
```

State System Fixes

The state system has been tested and better refined. As of this release the state system is ready for early testers to start playing with. If you are interested in working with the state system please check out the (still very small) salt-states GitHub repo:

https://github.com/saltstack/salt-states

This git repo is the active development branch for determining how a clean salt-state database should look and act. Since the salt state system is still very young a lot of help is still needed here. Please fork the salt-states repo and help us develop a truly large and scalable system for configuration management!

Notable Bug Fixes

Python 2.6 String Formatting

Python 2.6 does not support format strings without an index identifier, all of them have been repaired.

Cython Loading Disabled by Default

Cython loading requires a development tool chain to be installed on the minion, requiring this by default can cause problems for most Salt deployments. If Cython auto loading is desired it will need to be turned on in the minion config.

20.2.110 Salt 0.9.3 Release Notes

release 2011-11-05

Salt 0.9.3 is finally arrived. This is another big step forward for Salt, new features range from proper FreeBSD support to fixing issues seen when attaching a minion to a master over the Internet.

The biggest improvements in 0.9.3 though can be found in the state system, it has progressed from something ready for early testers to a system ready to compete with platforms such as Puppet and Chef. The backbone of the state system has been greatly refined and many new features are available.

Download!

The Salt source can be downloaded from the salt GitHub site:

https://cloud.github.com/downloads/saltstack/salt/salt-0.9.3.tar.gz

Or from PyPI:

https://pypi.python.org/packages/source/s/salt/salt-0.9.3.tar.gz

For instructions on how to set up Salt please see the *Installation* instructions.

New Features

WAN Support

Recently more people have been testing Salt minions connecting to Salt Masters over the Internet. It was found that Minions would commonly loose their connection to the master when working over the internet. The minions can now detect if the connection has been lost and reconnect to the master, making WAN connections much more reliable.

State System Fixes

Substantial testing has gone into the state system and it is ready for real world usage. A great deal has been added to the documentation for states and the modules and functions available to states have been cleanly documented.

A number of State System bugs have also been founds and repaired, the output from the state system has also been refined to be extremely clear and concise.

Error reporting has also been introduced, issues found in sls files will now be clearly reported when executing Salt States.

Extend Declaration

The Salt States have also gained the `extend` declaration. This declaration allows for states to be cleanly modified in a post environment. Simply said, if there is an apache.sls file that declares the apache service, then another sls can include apache and then extend it:

```
include:
  - apache

extend:
  apache:
    service:
      - require:
        - pkg: mod_python
```

```
mod_python:
  pkg:
    - installed
```

The notable behavior with the extend functionality is that it literally extends or overwrites a declaration set up in another sls module. This means that Salt will behave as though the modifications were made directly to the apache sls. This ensures that the apache service in this example is directly tied to all requirements.

Highstate Structure Specification

This release comes with a clear specification of the Highstate data structure that is used to declare Salt States. This specification explains everything that can be declared in the Salt SLS modules.

The specification is extremely simple, and illustrates how Salt has been able to fulfill the requirements of a central configuration manager within a simple and easy to understand format and specification.

SheBang Renderer Switch

It came to our attention that having many renderers means that there may be a situation where more than one State Renderer should be available within a single State Tree.

The method chosen to accomplish this was something already familiar to developers and systems administrators, a SheBang. The Python State Renderer displays this new capability.

Python State Renderer

Until now Salt States could only be declared in yaml or json using Jinja or Mako. A new, very powerful, renderer has been added, making it possible to write Salt States in pure Python:

```
#!py

def run():
    '''
    Install the python-mako package
    '''
    return {'include': ['python'],
            'python-mako': {'pkg': ['installed']}}
```

This renderer is used by making a run function that returns the Highstate data structure. Any capabilities of Python can be used in pure Python sls modules.

This example of a pure Python sls module is the same as this example in yaml:

```
include:
  - python

python-mako:
  pkg:
    - installed
```

FreeBSD Support

Additional support has been added for FreeBSD, this is Salt's first branch out of the Linux world and proves the viability of Salt on non-Linux platforms.

Salt remote execution already worked on FreeBSD, and should work without issue on any Unix-like platform. But this support comes in the form of package management and user support, so Salt States also work on FreeBSD now.

The new freebsdpkg module provides package management support for FreeBSD and the new pw_user and pw_group provide user and group management.

Module and State Additions

Cron Support

Support for managing the system crontab has been added, declaring a cron state can be done easily:

```
date > /tmp/datestamp:
  cron:
    - present
    - user: fred
    - minute: 5
    - hour: 3
```

File State Additions

The file state has been given a number of new features, primarily the directory, recurse, symlink, and absent functions.

file.directory Make sure that a directory exists and has the right permissions.

```
/srv/foo:
  file:
    - directory
    - user: root
    - group: root
    - mode: 1755
```

file.symlink Make a symlink.

```
/var/lib/www:
  file:
    - symlink
    - target: /srv/www
    - force: True
```

file.recurse The recurse state function will recursively download a directory on the master file server and place it on the minion. Any change in the files on the master will be pushed to the minion. The recurse function is very powerful and has been tested by pushing out the full Linux kernel source.

```
/opt/code:
  file:
    - recurse
    - source: salt://linux
```

file.absent Make sure that the file is not on the system, recursively deletes directories, files, and symlinks.

```
/etc/httpd/conf.d/somebogusfile.conf:
  file:
    - absent
```

Sysctl Module and State

The sysctl module and state allows for sysctl components in the kernel to be managed easily. the sysctl module contains the following functions:

sysctl.show Return a list of sysctl parameters for this minion

sysctl.get Return a single sysctl parameter for this minion

sysctl.assign Assign a single sysctl parameter for this minion

sysctl.persist Assign and persist a simple sysctl parameter for this minion

The sysctl state allows for sysctl parameters to be assigned:

```
vm.swappiness:
  sysctl:
    - present
    - value: 20
```

Kernel Module Management

A module for managing Linux kernel modules has been added. The new functions are as follows:

kmod.available Return a list of all available kernel modules

kmod.check_available Check to see if the specified kernel module is available

kmod.lsmod Return a dict containing information about currently loaded modules

kmod.load Load the specified kernel module

kmod.remove Unload the specified kernel module

The kmod state can enforce modules be either present or absent:

```
kvm_intel:
  kmod:
    - present
```

Ssh Authorized Keys

The ssh_auth state can distribute ssh authorized keys out to minions. Ssh authorized keys can be present or absent.

```
AAAAB3NzaC1kc3MAAACBAL0sQ9fJ5bYTEyYvlRBsJdDOo49CNfhlWHWXQRqul6rwL4KIuPrhY7hBw0tV7UNC7J9IZRNO4iGod9C+C
↪xw6NtnQZVMcmZIre5Elrw3OKgxcDNomjYFNHuOYaQLBBMosyO++tJe1KTAr3A2zGj2xbWO9JhEzu8xvSdF8jRu0N5SRXPpzSyU
↪x75wolBDbVzeTlxWxgxhafj7P6Ncdv25Wz9wvc6ko/puww0b3rcLNqK+XCNJlsM/
↪7lB8Q26iK5mRZzNsGeGwGTyzNIMBekGYQ5MRdIcPv5dBIP/1M6fQDEsAXQ==:
  ssh_auth:
    - present
    - user: frank
    - enc: dsa
    - comment: 'Frank's key'
```

20.2.111 Salt 0.9.4 Release Notes

release 2011-11-27

Salt 0.9.4 has arrived. This is a critical update that repairs a number of key bugs found in 0.9.3. But this update is not without feature additions as well! 0.9.4 adds support for Gentoo portage to the pkg module and state system. Also there are 2 major new state additions, the failhard option and the ability to set up finite state ordering with the `order` option.

This release also sees our largest increase in community contributions. These contributors have and continue to be the life blood of the Salt project, and the team continues to grow. I want to put out a big thanks to our new and existing contributors.

Download!

The Salt source can be downloaded from the salt GitHub site:

https://cloud.github.com/downloads/saltstack/salt/salt-0.9.4.tar.gz

Or from PyPI:

https://pypi.python.org/packages/source/s/salt/salt-0.9.4.tar.gz

For instructions on how to set up Salt please see the *Installation* instructions.

New Features

Failhard State Option

Normally, when a state fails Salt continues to execute the remainder of the defined states and will only refuse to execute states that require the failed state.

But the situation may exist, where you would want all state execution to stop if a single state execution fails. The capability to do this is called `failing hard`.

State Level Failhard

A single state can have a failhard set, this means that if this individual state fails that all state execution will immediately stop. This is a great thing to do if there is a state that sets up a critical config file and setting a require for each state that reads the config would be cumbersome. A good example of this would be setting up a package manager early on:

```
/etc/yum.repos.d/company.repo:
  file:
    - managed
    - source: salt://company/yumrepo.conf
    - user: root
    - group: root
    - mode: 644
    - order: 1
    - failhard: True
```

In this situation, the yum repo is going to be configured before other states, and if it fails to lay down the config file, than no other states will be executed.

Global Failhard

It may be desired to have failhard be applied to every state that is executed, if this is the case, then failhard can be set in the master configuration file. Setting failhard in the master configuration file will result in failing hard when any minion gathering states from the master have a state fail.

This is NOT the default behavior, normally Salt will only fail states that require a failed state.

Using the global failhard is generally not recommended, since it can result in states not being executed or even checked. It can also be confusing to see states failhard if an admin is not actively aware that the failhard has been set.

To use the global failhard set failhard: True in the master configuration

Finite Ordering of State Execution

When creating salt sls files, it is often important to ensure that they run in a specific order. While states will always execute in the same order, that order is not necessarily defined the way you want it.

A few tools exist in Salt to set up the correct state ordering, these tools consist of requisite declarations and order options.

The Order Option

Before using the order option, remember that the majority of state ordering should be done with requisite statements, and that a requisite statement will override an order option.

The order option is used by adding an order number to a state declaration with the option *order*:

```
vim:
  pkg:
    - installed
    - order: 1
```

By adding the order option to *1* this ensures that the vim package will be installed in tandem with any other state declaration set to the order *1*.

Any state declared without an order option will be executed after all states with order options are executed.

But this construct can only handle ordering states from the beginning. Sometimes you may want to send a state to the end of the line, to do this set the order to last:

```
vim:
  pkg:
    - installed
    - order: last
```

Substantial testing has gone into the state system and it is ready for real world usage. A great deal has been added to the documentation for states and the modules and functions available to states have been cleanly documented.

A number of State System bugs have also been founds and repaired, the output from the state system has also been refined to be extremely clear and concise.

Error reporting has also been introduced, issues found in sls files will now be clearly reported when executing Salt States.

Gentoo Support

Additional experimental support has been added for Gentoo. This is found in the contribution from Doug Renn, aka nestegg.

20.2.112 Salt 0.9.5 Release Notes

release 2012-01-15

Salt 0.9.5 is one of the largest steps forward in the development of Salt.

0.9.5 comes with many milestones, this release has seen the community of developers grow out to an international team of 46 code contributors and has many feature additions, feature enhancements, bug fixes and speed improvements.

> **Warning**: Be sure to *read the upgrade instructions* about the switch to msgpack before upgrading!

Community

Nothing has proven to have more value to the development of Salt that the outstanding community that has been growing at such a great pace around Salt. This has proven not only that Salt has great value, but also the expandability of Salt is as exponential as I originally intended.

0.9.5 has received over 600 additional commits since 0.9.4 with a swath of new committers. The following individuals have contributed to the development of 0.9.5:

- Aaron Bull Schaefer
- Antti Kaihola
- Bas Tichelaar
- Brad Barden
- Brian Wagner
- Byron Clark
- Chris Scheller
- Christer Edwards
- Clint Savage
- Corey Quinn
- David Boucha
- Eivind Uggedal
- Eric Poelke
- Evan Borgstrom
- Jed Glazner

- Jeff Schroeder
- Jeffrey C. Ollie
- Jonas Buckner
- Kent Tenney
- Martin Schnabel
- Maxim Burgerhout
- Mitch Anderson
- Nathaniel Whiteinge
- Seth House
- Thomas S Hatch
- Thomas Schreiber
- Tor Hveem
- lzyeval
- syphernl

This makes 21 new developers since 0.9.4 was released!

To keep up with the growing community follow Salt on Ohloh (http://www.ohloh.net/p/salt), to join the Salt development community, fork Salt on GitHub, and get coding (https://github.com/saltstack/salt)!

Major Features

SPEED! Pickle to msgpack

For a few months now we have been talking about moving away from Python pickles for network serialization, but a preferred serialization format had not yet been found. After an extensive performance testing period involving everything from JSON to protocol buffers, a clear winner emerged. Message Pack (http://msgpack.org/) proved to not only be the fastest and most compact, but also the most ``salt like''. Message Pack is simple, and the code involved is very small. The msgpack library for Python has been added directly to Salt.

This move introduces a few changes to Salt. First off, Salt is no longer a ``noarch'' package, since the msgpack lib is written in C. Salt 0.9.5 will also have compatibility issues with 0.9.4 with the default configuration.

We have gone through great lengths to avoid backwards compatibility issues with Salt, but changing the serialization medium was going to create issues regardless. Salt 0.9.5 is somewhat backwards compatible with earlier minions. A 0.9.5 master can command older minions, but only if the `serial` config value in the master is set to `pickle`. This will tell the master to publish messages in pickle format and will allow the master to receive messages in both msgpack and pickle formats.

Therefore **the suggested methods for upgrading** are either to just upgrade everything at once, or:

1. Upgrade the master to 0.9.5
2. Set `serial` to `pickle` in the master config
3. Upgrade the minions
4. Remove the `serial` option from the master config

Since pickles can be used as a security exploit the ability for a master to accept pickles from minions at all will be removed in a future release.

C Bindings for YAML

All of the YAML rendering is now done with the YAML C bindings. This speeds up all of the sls files when running states.

Experimental Windows Support

David Boucha has worked tirelessly to bring initial support to Salt for Microsoft Windows operating systems. Right now the Salt Minion can run as a native Windows service and accept commands.

In the weeks and months to come Windows will receive the full treatment and will have support for Salt States and more robust support for managing Windows systems. This is a big step forward for Salt to move entirely outside of the Unix world, and proves Salt is a viable cross platform solution. Big Thanks to Dave for his contribution here!

Dynamic Module Distribution

Many Salt users have expressed the desire to have Salt distribute in-house modules, states, renderers, returners, and grains. This support has been added in a number of ways:

Modules via States

Now when salt modules are deployed to a minion via the state system as a file, then the modules will be automatically loaded into the active running minion - no restart required - and into the active running state. So custom state modules can be deployed and used in the same state run.

Modules via Module Environment Directories

Under the file_roots each environment can now have directories that are used to deploy large groups of modules. These directories sync modules at the beginning of a state run on the minion, or can be manually synced via the Salt module *salt.modules.saltutil.sync_all*.

The directories are named:

- `_modules`
- `_states`
- `_grains`
- `_renderers`
- `_returners`

The modules are pushed to their respective scopes on the minions.

Module Reloading

Modules can now be reloaded without restarting the minion, this is done by calling the `salt.modules.sys.reload_modules` function.

But wait, there's more! Now when a salt module of any type is added via states the modules will be automatically reloaded, allowing for modules to be laid down with states and then immediately used.

Finally, all modules are reloaded when modules are dynamically distributed from the salt master.

Enable / Disable Added to Service

A great deal of demand has existed for adding the capability to set services to be started at boot in the service module. This feature also comes with an overhaul of the service modules and initial systemd support.

This means that the *service state* can now accept `-enable: True` to make sure a service is enabled at boot, and `-enable: False` to make sure it is disabled.

Compound Target

A new target type has been added to the lineup, the compound target. In previous versions the desired minions could only be targeted via a single specific target type, but now many target specifications can be declared.

These targets can also be separated by and/or operators, so certain properties can be used to omit a node:

```
salt -C 'webserv* and G@os:Debian or E@db.*' test.ping
```

will match all minions with ids starting with webserv via a glob and minions matching the `os:Debian` grain. Or minions that match the `db.*` regular expression.

Node Groups

Often the convenience of having a predefined group of minions to execute targets on is desired. This can be accomplished with the new nodegroups feature. Nodegroups allow for predefined compound targets to be declared in the master configuration file:

```
nodegroups:
  group1: 'L@foo.domain.com,bar.domain.com,baz.domain.com and bl*.domain.com'
  group2: 'G@os:Debian and foo.domain.com'
```

And then used via the `-N` option:

```
salt -N group1 test.ping
```

Minion Side Data Store

The data module introduces the initial approach into storing persistent data on the minions, specific to the minions. This allows for data to be stored on minions that can be accessed from the master or from the minion.

The Minion datastore is young, and will eventually provide an interface similar to a more mature key/value pair server.

Major Grains Improvement

The Salt grains have been overhauled to include a massive amount of extra data. this includes hardware data, os data and salt specific data.

Salt -Q is Useful Now

In the past the salt query system, which would display the data from recent executions would be displayed in pure Python, and it was unreadable.

0.9.5 has added the outputter system to the `-Q` option, thus enabling the salt query system to return readable output.

Packaging Updates

Huge strides have been made in packaging Salt for distributions. These additions are thanks to our wonderful community where the work to set up packages has proceeded tirelessly.

FreeBSD

Salt on FreeBSD? There a port for that:

http://svnweb.freebsd.org/ports/head/sysutils/py-salt/

This port was developed and added by Christer Edwards. This also marks the first time Salt has been included in an upstream packaging system!

Fedora and Red Hat Enterprise

Salt packages have been prepared for inclusion in the Fedora Project and in EPEL for Red Hat Enterprise 5 and 6. These packages are the result of the efforts made by Clint Savage (herlo).

Debian/Ubuntu

A team of many contributors have assisted in developing packages for Debian and Ubuntu. Salt is still actively seeking inclusion in upstream Debian and Ubuntu and the package data that has been prepared is being pushed through the needed channels for inclusion.

These packages have been prepared with the help of:

- Corey
- Aaron Toponce
- and`

More to Come

We are actively seeking inclusion in more distributions. Primarily getting Salt into Gentoo, SUSE, OpenBSD, and preparing Solaris support are all turning into higher priorities.

Refinement

Salt continues to be refined into a faster, more stable and more usable application. 0.9.5 comes with more debug logging, more bug fixes and more complete support.

More Testing, More BugFixes

0.9.5 comes with more bugfixes due to more testing than any previous release. The growing community and the introduction a a dedicated QA environment have unearthed many issues that were hiding under the covers. This has further refined and cleaned the state interface, taking care of things from minor visual issues to repairing misleading data.

Custom Exceptions

A custom exception module has been added to throw salt specific exceptions. This allows Salt to give much more granular error information.

New Modules

data

The new data module manages a persistent datastore on the minion. Big thanks to bastichelaar for his help refining this module

freebsdkmod

FreeBSD kernel modules can now be managed in the same way Salt handles Linux kernel modules.

This module was contributed thanks to the efforts of Christer Edwards

gentoo_service

Support has been added for managing services in Gentoo. Now Gentoo services can be started, stopped, restarted, enabled, disabled, and viewed.

pip

The pip module introduces management for pip installed applications. Thanks goes to whitinge for the addition of the pip module

rh_service

The rh_service module enables Red Hat and Fedora specific service management. Now Red Hat like systems come with extensive management of the classic init system used by Red Hat

saltutil

The saltutil module has been added as a place to hold functions used in the maintenance and management of salt itself. Saltutil is used to salt the salt minion. The saltutil module is presently used only to sync extension modules from the master server.

systemd

Systemd support has been added to Salt, now systems using this next generation init system are supported on systems running systemd.

virtualenv

The virtualenv module has been added to allow salt to create virtual Python environments. Thanks goes to whitinge for the addition of the virtualenv module

win_disk

Support for gathering disk information on Microsoft Windows minions The windows modules come courtesy of Utah_Dave

win_service

The win_service module adds service support to Salt for Microsoft Windows services

win_useradd

Salt can now manage local users on Microsoft Windows Systems

yumpkg5

The yumpkg module introduces in 0.9.4 uses the yum API to interact with the yum package manager. Unfortunately, on Red Hat 5 systems salt does not have access to the yum API because the yum API is running under Python 2.4 and Salt needs to run under Python 2.6.

The yumpkg5 module bypasses this issue by shelling out to yum on systems where the yum API is not available.

New States

mysql_database

The new mysql_database state adds the ability to systems running a mysql server to manage the existence of mysql databases.

The mysql states are thanks to syphernl

mysql_user

The mysql_user state enables mysql user management.

virtualenv

The virtualenv state can manage the state of Python virtual environments. Thanks to Whitinge for the virtualenv state

New Returners

`cassandra_returner`

A returner allowing Salt to send data to a cassandra server. Thanks to Byron Clark for contributing this returner

20.2.113 Salt 0.9.6 Release Notes

release 2012-01-21

Salt 0.9.6 is a release targeting a few bugs and changes. This is primarily targeting an issue found in the names declaration in the state system. But a few other bugs were also repaired, like missing support for grains in extmods.

Due to a conflict in distribution packaging msgpack will no longer be bundled with Salt, and is required as a dependency.

New Features

HTTP and ftp support in files.managed

Now under the source option in the file.managed state a HTTP or ftp address can be used instead of a file located on the salt master.

Allow Multiple Returners

Now the returner interface can define multiple returners, and will also return data back to the master, making the process less ambiguous.

Minion Memory Improvements

A number of modules have been taken out of the minion if the underlying systems required by said modules are not present on the minion system. A number of other modules need to be stripped out in this same way which should continue to make the minion more efficient.

Minions Can Locally Cache Return Data

A new option, cache_jobs, has been added to the minion to allow for all of the historically run jobs to cache on the minion, allowing for looking up historic returns. By default cache_jobs is set to False.

Pure Python Template Support For file.managed

Templates in the file.managed state can now be defined in a Python script. This script needs to have a run function that returns the string that needs to be in the named file.

20.2.114 Salt 0.9.7 Release Notes

release 2012-02-15

Salt 0.9.7 is here! The latest iteration of Salt brings more features and many fixes. This release is a great refinement over 0.9.6, adding many conveniences under the hood, as well as some features that make working with Salt much better.

A few highlights include the new Job system, refinements to the requisite system in states, the `mod_init` interface for states, external node classification, search path to managed files in the file state, and refinements and additions to dynamic module loading.

0.9.7 also introduces the long developed (and oft changed) unit test framework and the initial unit tests.

Major Features

Salt Jobs Interface

The new jobs interface makes the management of running executions much cleaner and more transparent. Building on the existing execution framework the jobs system allows clear introspection into the active running state of the running Salt interface.

The Jobs interface is centered in the new minion side proc system. The minions now store msgpack serialized files under `/var/cache/salt/proc`. These files keep track of the active state of processes on the minion.

Functions in the saltutil Module

A number of functions have been added to the saltutil module to manage and view the jobs:

`running` - Returns the data of all running jobs that are found in the proc directory.

`find_job` - Returns specific data about a certain job based on job id.

`signal_job` - Allows for a given jid to be sent a signal.

`term_job` - Sends a termination signal (`SIGTERM,15`) to the process controlling the specified job.

`kill_job` Sends a kill signal (`SIGKILL,9`) to the process controlling the specified job.

The jobs Runner

A convenience runner front end and reporting system has been added as well. The jobs runner contains functions to make viewing data easier and cleaner.

The jobs runner contains a number of functions...

active

The active function runs `saltutil.running` on all minions and formats the return data about all running jobs in a much more usable and compact format. The active function will also compare jobs that have returned and jobs that are still running, making it easier to see what systems have completed a job and what systems are still being waited on.

lookup_jid

When jobs are executed the return data is sent back to the master and cached. By default is is cached for 24 hours, but this can be configured via the `keep_jobs` option in the master configuration.

Using the `lookup_jid` runner will display the same return data that the initial job invocation with the salt command would display.

list_jobs

Before finding a historic job, it may be required to find the job id. `list_jobs` will parse the cached execution data and display all of the job data for jobs that have already, or partially returned.

External Node Classification

Salt can now use external node classifiers like Cobbler's `cobbler-ext-nodes`.

Salt uses specific data from the external node classifier. In particular the classes value denotes which sls modules to run, and the environment value sets to another environment.

An external node classification can be set in the master configuration file via the `external_nodes` option: https://salt.readthedocs.io/en/latest/ref/configuration/master.html#external-nodes

External nodes are loaded in addition to the top files. If it is intended to only use external nodes, do not deploy any top files.

State Mod Init System

An issue arose with the pkg state. Every time a package was run Salt would need to refresh the package database. This made systems with slower package metadata refresh speeds much slower to work with. To alleviate this issue the `mod_init` interface has been added to salt states.

The `mod_init` interface is a function that can be added to a state file. This function is called with the first state called. In the case of the pkg state, the `mod_init` function sets up a tag which makes the package database only refresh on the first attempt to install a package.

In a nutshell, the `mod_init` interface allows a state to run any command that only needs to be run once, or can be used to set up an environment for working with the state.

Source File Search Path

The file state continues to be refined, adding speed and capabilities. This release adds the ability to pass a list to the source option. This list is then iterated over until the source file is found, and the first found file is used.

The new syntax looks like this:

```
/etc/httpd/conf/httpd.conf:
  file:
    - managed
    - source:
      - salt://httpd/httpd.conf
      - http://myserver/httpd.conf: md5=8c1fe119e6f1fd96bc06614473509bf1
```

The source option can take sources in the list from the salt file server as well as an arbitrary web source. If using an arbitrary web source the checksum needs to be passed as well for file verification.

Refinements to the Requisite System

A few discrepancies were still lingering in the requisite system, in particular, it was not possible to have a `require` and a `watch` requisite declared in the same state declaration.

This issue has been alleviated, as well as making the requisite system run more quickly.

Initial Unit Testing Framework

Because of the module system, and the need to test real scenarios, the development of a viable unit testing system has been difficult, but unit testing has finally arrived. Only a small amount of unit testing coverage has been developed, much more coverage will be in place soon.

A huge thanks goes out to those who have helped with unit testing, and the contributions that have been made to get us where we are. Without these contributions unit tests would still be in the dark.

Compound Targets Expanded

Originally only support for `and` and `or` were available in the compound target. 0.9.7 adds the capability to negate compound targets with `not`.

Nodegroups in the Top File

Previously the nodegroups defined in the master configuration file could not be used to match nodes for states. The nodegroups support has been expanded and the nodegroups defined in the master configuration can now be used to match minions in the top file.

20.2.115 Salt 0.9.8 Release Notes

release 2012-03-21

Salt 0.9.8 is a big step forward, with many additions and enhancements, as well as a number of precursors to advanced future developments.

This version of Salt adds much more power to the command line, making the old hard timeout issues a thing of the past and adds keyword argument support. These additions are also available in the salt client API, making the available API tools much more powerful.

The new pillar system allows for data to be stored on the master and assigned to minions in a granular way similar to the state system. It also allows flexibility for users who want to keep data out of their state tree similar to `external lookup' functionality in other tools.

A new way to extend requisites was added, the ``requisite in'' statement. This makes adding requires or watch statements to external state decs much easier.

Additions to requisites making them much more powerful have been added as well as improved error checking for sls files in the state system. A new provider system has been added to allow for redirecting what modules run in the background for individual states.

Support for openSUSE has been added and support for Solaris has begun serious development. Windows support has been significantly enhanced as well.

The matcher and target systems have received a great deal of attention. The default behavior of grain matching has changed slightly to reflect the rest of salt and the compound matcher system has been refined.

A number of impressive features with keyword arguments have been added to both the CLI and to the state system. This makes states much more powerful and flexible while maintaining the simple configuration everyone loves.

The new batch size capability allows for executions to be rolled through a group of targeted minions a percentage or specific number at a time. This was added to prevent the ``thundering herd'' problem when targeting large numbers of minions for things like service restarts or file downloads.

Upgrade Considerations

Upgrade Issues

There was a previously missed oversight which could cause a newer minion to crash an older master. That oversight has been resolved so the version incompatibility issue will no longer occur. When upgrading to 0.9.8 make sure to upgrade the master first, followed by the minions.

Debian/Ubuntu Packages

The original Debian/Ubuntu packages were called salt and included all salt applications. New packages in the ppa are split by function. If an old salt package is installed then it should be manually removed and the new split packages need to be freshly installed.

On the master:

```
# apt-get purge salt
# apt-get install salt-{master,minion}
```

On the minions:

```
# apt-get purge salt
# apt-get install salt-minion
```

And on any Syndics:

```
# apt-get install salt-syndic
```

The official Salt PPA for Ubuntu is located at: https://launchpad.net/~saltstack/+archive/salt

Major Features

Pillar

Pillar offers an interface to declare variable data on the master that is then assigned to the minions. The pillar data is made available to all modules, states, sls files etc. It is compiled on the master and is declared using the existing renderer system. This means that learning pillar should be fairly trivial to those already familiar with salt states.

CLI Additions

The `salt` command has received a serious overhaul and is more powerful than ever. Data is returned to the terminal as it is received, and the salt command will now wait for all running minions to return data before stopping. This makes adding very large *--timeout* arguments completely unnecessary and gets rid of long running operations returning empty `{}` when the timeout is exceeded.

When calling salt via sudo, the user originally running salt is saved to the log for auditing purposes. This makes it easy to see who ran what by just looking through the minion logs.

The *salt-key* command gained the *-D* and *--delete-all* arguments for removing all keys. Be careful with this one!

Running States Without a Master

The addition of running states without a salt-master has been added to 0.9.8. This feature allows for the unmodified salt state tree to be read locally from a minion. The result is that the UNMODIFIED state tree has just become portable, allowing minions to have a local copy of states or to manage states without a master entirely.

This is accomplished via the new file client interface in Salt that allows for the `salt://` URI to be redirected to custom interfaces. This means that there are now two interfaces for the salt file server, calling the master or looking in a local, minion defined `file_roots`.

This new feature can be used by modifying the minion config to point to a local `file_roots` and setting the `file_client` option to `local`.

Keyword Arguments and States

State modules now accept the `**kwargs` argument. This results in all data in a sls file assigned to a state being made available to the state function.

This passes data in a transparent way back to the modules executing the logic. In particular, this allows adding arguments to the `pkg.install` module that enable more advanced and granular controls with respect to what the state is capable of.

An example of this along with the new debconf module for installing ldap client packages on Debian:

```
ldap-client-packages:
  pkg:
    - debconf: salt://debconf/ldap-client.ans
    - installed
    - names:
      - nslcd
      - libpam-ldapd
      - libnss-ldapd
```

Keyword Arguments and the CLI

In the past it was required that all arguments be passed in the proper order to the *salt* and *salt-call* commands. As of 0.9.8, keyword arguments can be passed in the form of `kwarg=argument`.

```
# salt -G 'type:dev' git.clone \
    repository=https://github.com/saltstack/salt.git cwd=/tmp/salt user=jeff
```

Matcher Refinements and Changes

A number of fixes and changes have been applied to the Matcher system. The most noteworthy is the change in the grain matcher. The grain matcher used to use a regular expression to match the passed data to a grain, but now defaults to a shell glob like the majority of match interfaces in Salt. A new option is available that still uses the old style regex matching to grain data called `grain-pcre`. To use regex matching in compound matches use the letter *P*.

For example, this would match any ArchLinux or Fedora minions:

```
# salt --grain-pcre 'os:(Arch:Fed).*' test.ping
```

And the associated compound matcher suitable for `top.sls` is *P*:

```
P@os:(Arch|Fed).*
```

NOTE: Changing the grains matcher from pcre to glob is backwards incompatible.

Support has been added for matching minions with Yahoo's range library. This is handled by passing range syntax with *-R* or *--range* arguments to salt.

More information at: https://github.com/ytoolshed/range/wiki/%22yamlfile%22-module-file-spec

Requisite ``in''

A new means to updating requisite statements has been added to make adding watchers and requires to external states easier. Before 0.9.8 the only way to extend the states that were watched by a state outside of the sls was to use an extend statement:

```
include:
  - http
extend:
  apache:
    service:
      - watch:
        - pkg: tomcat

tomcat:
  pkg:
    - installed
```

But the new `Requisite in` statement allows for easier extends for requisites:

```
include:
  - http

tomcat:
  pkg:
    - installed
    - watch_in:
      - service: apache
```

Requisite in is part of the extend system, so still remember to always include the sls that is being extended!

Providers

Salt predetermines what modules should be mapped to what uses based on the properties of a system. These determinations are generally made for modules that provide things like package and service management. The apt module maps to pkg on Debian and the yum module maps to pkg on Fedora for instance.

Sometimes in states, it may be necessary for a non-default module to be used for the desired functionality. For instance, an Arch Linux system may have been set up with systemd support. Instead of using the default service module detected for Arch Linux, the systemd module can be used:

```
http:
  service:
    - running
    - enable: True
    - provider: systemd
```

Default providers can also be defined in the minion config file:

```
providers:
  service: systemd
```

When default providers are passed in the minion config, then those providers will be applied to all functionality in Salt, this means that the functions called by the minion will use these modules, as well as states.

Requisite Glob Matching

Requisites can now be defined with glob expansion. This means that if there are many requisites, they can be defined on a single line.

To watch all files in a directory:

```
http:
  service:
    - running
    - enable: True
    - watch:
      - file: /etc/http/conf.d/*
```

This example will watch all defined files that match the glob `/etc/http/conf.d/*`

Batch Size

The new batch size option allows commands to be executed while maintaining that only so many hosts are executing the command at one time. This option can take a percentage or a finite number:

```
salt '*' -b 10 test.ping

salt -G 'os:RedHat' --batch-size 25% apache.signal restart
```

This will only run test.ping on 10 of the targeted minions at a time and then restart apache on 25% of the minions matching `os:RedHat` at a time and work through them all until the task is complete. This makes jobs like rolling web server restarts behind a load balancer or doing maintenance on BSD firewalls using carp much easier with salt.

Module Updates

This is a list of notable, but non-exhaustive updates with new and existing modules.

Windows support has seen a flurry of support this release cycle. We've gained all new `file`, `network`, and `shadow` modules. Please note that these are still a work in progress.

For our ruby users, new `rvm` and `gem` modules have been added along with the `associated states`

The `virt` module gained basic Xen support.

The `yum` module gained Scientific Linux support.

The `pkg` module on Debian, Ubuntu, and derivatives force apt to run in a non-interactive mode. This prevents issues when package installation waits for confirmation.

A `pkg` module for OpenSUSE's zypper was added.

The `service` module on Ubuntu natively supports upstart.

A new `debconf` module was contributed by our community for more advanced control over deb package deployments on Debian based distributions.

The `mysql.user` state and `mysql` module gained a *password_hash* argument.

The `cmd` module and state gained a *shell* keyword argument for specifying a shell other than `/bin/sh` on Linux / Unix systems.

New `git` and `mercurial` modules have been added for fans of distributed version control.

In Progress Development

Master Side State Compiling

While we feel strongly that the advantages gained with minion side state compiling are very critical, it does prevent certain features that may be desired. 0.9.8 has support for initial master side state compiling, but many more components still need to be developed, it is hoped that these can be finished for 0.9.9.

The goal is that states can be compiled on both the master and the minion allowing for compilation to be split between master and minion. Why will this be great? It will allow storing sensitive data on the master and sending it to some minions without all minions having access to it. This will be good for handling ssl certificates on front-end web servers for instance.

Solaris Support

Salt 0.9.8 sees the introduction of basic Solaris support. The daemon runs well, but grains and more of the modules need updating and testing.

Windows Support

Salt states on windows are now much more viable thanks to contributions from our community! States for file, service, local user, and local group management are more fully fleshed out along with network and disk modules. Windows users can also now manage registry entries using the new ``reg'' module.

20.2.116 Salt 0.9.9 Release Notes

release 2012-04-27

0.9.9 is out and comes with some serious bug fixes and even more serious features. This release is the last major feature release before 1.0.0 and could be considered the 1.0.0 release candidate.

A few updates include more advanced kwargs support, the ability for salt states to more safely configure a running salt minion, better job directory management and the new state test interface.

Many new tests have been added as well, including the new minion swarm test that allows for easier testing of Salt working with large groups of minions. This means that if you have experienced stability issues with Salt before, particularly in larger deployments, that these bugs have been tested for, found, and killed.

Major Features

State Test Interface

Until 0.9.9 the only option when running states to see what was going to be changed was to print out the highstate with state.show_highstate and manually look it over. But now states can be run to discover what is going to be changed.

Passing the option `test=True` to many of the state functions will now cause the salt state system to only check for what is going to be changed and report on those changes.

```
salt '*' state.highstate test=True
```

Now states that would have made changes report them back in yellow.

State Syntax Update

A shorthand syntax has been added to sls files, and it will be the default syntax in documentation going forward. The old syntax is still fully supported and will not be deprecated, but it is recommended to move to the new syntax in the future. This change moves the state function up into the state name using a dot notation. This is in-line with how state functions are generally referred to as well:

The new way:

```
/etc/sudoers:
  file.present:
    - source: salt://sudo/sudoers
    - user: root
    - mode: 400
```

Use and Use_in Requisites

Two new requisite statements are available in 0.9.9. The use and use_in requisite and requisite-in allow for the transparent duplication of data between states. When a state ``uses'' another state it copies the other state's arguments as defaults. This was created in direct response to the new network state, and allows for many network interfaces to be configured in the same way easily. A simple example:

```
root_file:
  file.absent:
    - name: /tmp/nothing
```

```
    - user: root
    - mode: 644
    - group: root
    - use_in:
      - file: /etc/vimrc

fred_file:
  file.absent:
    - name: /tmp/nothing
    - user: fred
    - group: marketing
    - mode: 660

/files/marketing/district7.rst:
  file.present:
    - source: salt://marketing/district7.rst
    - template: jinja
    - use:
      - file: fred_file

/etc/vimrc:
  file.present:
    - source: salt://edit/vimrc
```

This makes the 2 lower state decs inherit the options from their respectively ``used'' state decs.

Network State

The new network state allows for the configuration of network devices via salt states and the ip salt module. This addition has been given to the project by Jeff Hutchins and Bret Palsson from Jive Communications.

Currently the only network configuration backend available is for Red Hat based systems, like Red Hat Enterprise, CentOS, and Fedora.

Exponential Jobs

Originally the jobs executed were stored on the master in the format: `<cachedir>/jobs/jid/{minion ids}` But this format restricted the number of jobs in the cache to the number of subdirectories allowed on the filesystem. Ext3 for instance limits subdirectories to 32000. To combat this the new format for 0.9.9 is: `<cachedir>/jobs/jid_hash[:2]/jid_hash[2:]/{minion ids}` So that now the number of maximum jobs that can be run before the cleanup cycle hits the job directory is substantially higher.

ssh_auth Additions

The original ssh_auth state was limited to accepting only arguments to apply to a public key, and the key itself. This was restrictive due to the way the we learned that many people were using the state, so the key section has been expanded to accept options and arguments to the key that over ride arguments passed in the state. This gives substantial power to using ssh_auth with names:

```
sshkeys:
  ssh_auth:
    - present
    - user: backup
```

```
    - enc: ssh-dss
    - options:
      - option1="value1"
      - option2="value2 flag2"
    - comment: backup
    - names:
      -

```

LocalClient Additions

To follow up the recent additions in 0.9.8 of additional kwargs support, 0.9.9 also adds the capability to send kwargs into commands via a dict. This addition to the LocalClient api can be used like so:

```
import salt.client

client = salt.client.LocalClient('/etc/salt/master')
ret = client.cmd('*', 'cmd.run', ['ls -l'], kwarg={'cwd': '/etc'})
```

This update has been added to all cmd methods in the LocalClient class.

Better Self Salting

One problem faced with running Salt states, is that it has been difficult to manage the Salt minion via states, this is due to the fact that if the minion is called to restart while a state run is happening then the state run would be killed. 0.9.9 slightly changes the process scope of the state runs, so now when salt is executing states it can safely restart the salt-minion daemon.

In addition to daemonizing the state run, the apt module also daemonizes. This update makes it possible to cleanly update the salt-minion package on Debian/Ubuntu systems without leaving apt in an inconsistent state or killing

the active minion process mid-execution.

Wildcards for SLS Modules

Now, when including sls modules in include statements or in the top file, shell globs can be used. This can greatly simplify listing matched sls modules in the top file and include statements:

```
base:
  '*':
    - files*
    - core*
```

```
include:
  - users.dev.*
  - apache.ser*
```

External Pillar

Since the pillar data is just, data, it does not need to come expressly from the pillar interface. The external pillar system allows for hooks to be added making it possible to extract pillar data from any arbitrary external interface. The external pillar interface is configured via the `ext_pillar` option. Currently interfaces exist to gather external pillar data via hiera or via a shell command that sends yaml data to the terminal:

```
ext_pillar:
  - cmd_yaml: cat /etc/salt/ext.yaml
  - hiera: /etc/hirea.yaml
```

The initial external pillar interfaces and extra interfaces can be added to the file salt/pillar.py, it is planned to add more external pillar interfaces. If the need arises a new module loader interface will be created in the future to manage external pillar interfaces.

Single State Executions

The new state.single function allows for single states to be cleanly executed. This is a great tool for setting up a small group of states on a system or for testing out the behavior of single states:

```
salt '*' state.single user.present name=wade uid=2000
```

The test interface functions here as well, so changes can also be tested against as:

```
salt '*' state.single user.present name=wade uid=2000 test=True
```

New Tests

A few exciting new test interfaces have been added, the minion swarm allows not only testing of larger loads, but also allows users to see how Salt behaves with large groups of minions without having to create a large deployment.

Minion Swarm

The minion swarm test system allows for large groups of minions to be tested against easily without requiring large numbers of servers or virtual machines. The minion swarm creates as many minions as a system can handle and roots them in the /tmp directory and connects them to a master.

The benefit here is that we were able to replicate issues that happen only when there are large numbers of minions. A number of elusive bugs which were causing stability issues in masters and minions have since been hunted down. Bugs that used to take careful watch by users over several days can now be reliably replicated in minutes, and fixed in minutes.

Using the swarm is easy, make sure a master is up for the swarm to connect to, and then use the minionswarm.py script in the tests directory to spin up as many minions as you want. Remember, this is a fork bomb, don't spin up more than your hardware can handle!

```
python minionswarm.py -m 20 --master salt-master
```

Shell Tests

The new Shell testing system allows us to test the behavior of commands executed from a high level. This allows for the high level testing of salt runners and commands like salt-key.

Client Tests

Tests have been added to test the aspects of the client APIs and ensure that the client calls work, and that they manage passed data, in a desirable way.
