### 2.3.1 Synchronizing between Source and Preview

With more recent `\TeX` distributions, the Preview Window and the equivalent `\TeX` command `\TeX` to go to the (approximate) location of the source file. Source`\To` Preview and Preview`\To` Source.

### 2.4 Working with a Large Document

It is often handy to break a large document into smaller pieces and create a “root” file which combines them together for typesetting.

To have `\TeX`Shop “know
